CLINICAL TRIAL FACT SHEET

ELOQUENT - 2

ClinicalTrials.gov Identifier: NCT01239797

Phase III Randomized, Open-label Trial of Lenalidomide/Dexamethasone With or Without Elotuzumab in Relapsed or Refractory Multiple Myeloma

Trial Description: A phase 3, randomized, open-label trial of lenalidomide (Revlimid®) /dexamethasone with or without elotuzumab (a monoclonal antibody formerly known as HuLuc63) in relapsed or refractory multiple myeloma

Trial Objectives: To determine whether the addition of elotuzumab to lenalidomide/low-dose dexamethasone will increase progression-free survival

Assigned Interventions: Arm 1) active comparator arm: lenalidomide (oral) + dexamethasone (oral);
Arm 2) experimental arm: lenalidomide (oral) + dexamethasone (oral) + elotuzumab (IV)

Inclusion Criteria:

- 18 years of age or older
- Documented progression from most recent line of therapy
- 1–3 prior lines of therapy
- Measurable disease
- Prior treatment with lenalidomide permitted if best response achieved was ≥ partial response (PR); patient was not refractory; reason for discontinuation was not a related Grade 3 or 4 adverse event

Exclusion Criteria:

- Subjects with non-secretory or oligo-secretory or free light-chain only myeloma
- Active plasma cell leukemia
- Known Human Immunodeficiency Virus (HIV) infection or active hepatitis A, B, or C)
