ON the production line, or in the home, wherever you serve, today you have an added obligation to "Do your Best... Be at your Best."

America needs you strong and well. So don't neglect those daily precautions so important for health and well-being. Dress properly. Eat protective foods. Get plenty of sleep. Watch out for colds. Now, of all times, it's your duty to care for yourself... for your country!

Yes, America needs you healthy... but she also needs you cheerful, friendly, cooperative. So put on a smile. Cultivate old friends and make new ones. Look your neatest! Be your sweetest! Friendly ties will help keep us all pulling together!

On the job, and in your relationships with others, Do your Best... Be at your Best.

Today, more than ever, it is important to have always on hand a safe, trustworthy antiseptic and germicide for prompt use in the thousand minor emergencies that continually arise. As you undoubtedly know, Listerine Antiseptic has stood pre-eminent in the field of oral hygiene for more than half a century.

It is hardly necessary to add, that with so many fastidious persons who know the meaning of halitosis (bad breath), Listerine Antiseptic is the delightful precaution against offending this way when the condition is not systemic. Listerine Antiseptic quickly halts food fermentation in the mouth, so often a cause of the trouble.

LAMBERT PHARMACEUTICAL CO., St. Louis, Mo.

LISTERINE ANTI-SEPTIC
for Oral Hygiene

BECAUSE OF WARTIME restrictions you may not always be able to get Listerine Antiseptic in your favorite size. Rest assured, however, that we will make every effort to see that it is always available in some size at your drug counter.
FREE LESSON IN RADIO

GIVES YOU A REAL START TOWARD UNDERSTANDING THESE SUBJECTS
WITH 31 PHOTOS, SKETCHES, RADIO DRAWINGS

How superhet receivers work
How to remove tubes, tube shields
Three reasons why Radio outbreaks fail
Electrolytic bypass capacitors—how it works
Replacing damaged cone
Recentering voice coil
Remedies for open field coil

Output transformer—construction, trouble shooting

Tuning capacitor—construction, trouble shooting
How capacity varies
Restricting or Grid cap
Straightening bent rotor plates
L.F. transformers—what they do, their hints
How to locate defective sub-assembly parts
Inside story of carbon resistor
Paper, electrolyte, mica, trimmer condensers
Condensers become shriveled, leaky

Antenna, oscillator coil facts
Power transformers—construction, possible troubles
Installing power cord
Troubles of combination volume control, on-off switch

GETTING ACQUAINTED WITH RECEIVER SERVICING

See For Yourself How I Train You at Home to
BE A RADIO TECHNICIAN

J. E. SMITH, President
National Radio Institute
Tel: 222-6428
Established 28 Years

Lesson I'll send you is packed with facts, hints & tips that will help you to
understand the technical side of radio. The information you get will make you
an expert in a very short time.

Mail the Coupon for a FREE lesson from my
Radio Course. It shows how N.R.I. trains you for
Radio at home in spare time. And with this Sample
Lesson I'll send my 64-page illustrated book, "Win Rich Rewards in Radio."
It describes many fascinating jobs Radio offers, tells how you can train for
them at home in spare time.

More Radio Technicians and Operators
Now Make $50 a Week Than
Ever Before

There's a big shortage of capable Radio Technicians and Operators because so many
have joined the Army and Navy. Prizing Radio pays better now than for years. With
new Radios out of production, firing old sets which were formerly traded in, adds greatly to
the normal number of servicing jobs.

Broadcasting Stations, Aviation and Police Radio, Ship Radio and other communications
branches are scrambling for Operators and
Technicians to replace men who are leaving.

Many Beginners Soon Make $50, $100 a Week in Spare Time

There's probably an opportunity right in
your neighborhood to make money in spare
time during Radio. I'll give you the training
that has started hundreds of N.R.I.
students making $35, $100 a week extra within
6 months after enrolling. The N.R.I. Course isn't anything just prepared to take
advantage of the present market for
technical books and courses. It has been tried,
tested, developed, perfected during the 28
years we have been teaching Radio.

Find Out What N.R.I. Can Do For YOU

MAIL COUPON NOW for Free Sample
Lesson and 64-page illustrated book. You'll see
the many fascinating jobs Radio offers and
how YOU can train at home. If you want to
jump your pay—mail Coupon at once in
envelope or past on a penny postal—
J. E. SMITH, President, Dept. 3KM.
National Radio Institute, Washington 5, D. C.

Don't lose this opportunity—mail the
Coupon now.

TRAINING MEN FOR VITAL RADIO JOBS

310 A WEEK IN SPARE TIME

T repaired some Radio sets when I was on my toothless
less. I really don't see how you can live so much for such
a small amount of money. I made $400 in a year and a
half, and I have made an average of $310 a week—just spare time.

JOHN JERBY, 1238 Kalama St., Denver, Colo.

RADIO SERVICE MANAGER
OF 4 STORES

I was working in a garage when I enrolled with N.R.I.
and I am now Radio Service Manager for M. Furniture Co.
for their 4 stores.

JAMES R. RYAN, 110 Public Court, Fall River, Mass.

LIEUTENANT IN
U. S. ARMY SIGNAL CORPS

"I cannot divulge any information as to my type of work, but I can say that N.R.I.
training is certainly coming in mighty handy these days."

(Name and address omitted for military reasons.)

$200 A MONTH IN OWN BUSINESS

"For several years I have been in business for myself making around $300 a month.
Business has steadily increased."

ARLIE J. FROST,
500 W. Texas Ave., Goose Creek, Texas

MR. J. E. SMITH, President, Dept. 3KM

Learn this good-pay steady-employment Profession At Home

There is always a demand for Finger Print Experts, GOOD TIMES or BAD

Now ... when the demand for our graduates is greater than ever before, is a mighty good time to get into this profession which provides good pay, steady employment at all times. Let I.A.S. train you to fill a splendid position in this fascinating field of scientific crime detection.

Not Difficult to Learn

Crime detection is not simple, but with our modern method of teaching it is not difficult to learn. It is science—a real science, which when mastered THROUGH TRAINING gives you something no one can EVER take from you. A little of your spare time each day devoted to the mastery of this Course now should pay you big dividends for years to come.

53% of All Identification Bureaus in the United States

Employ I.A.S. trained men. Yes ... over 53 percent of all the Identification Bureaus in the United States employ students and graduates of I.A.S. A majority of these men are heads of Bureaus. Many of them know absolutely nothing about crime detection before they began training with I.A.S. Now they have steady jobs, good salaries and a fine future. Write today for full particulars and free book. Please give your age.

FREE! "THE BLUE BOOK OF CRIME"

This book takes you right behind the scenes where crime and science come to grips. It will show how easy, at low cost, can get started in this Big Important work without delay. Clip the coupon ... send it NOW!

YOUR freedom, your right to live, your future—are being delivered to you today! And the way the transaction ought to be completed is on a C. O. D. basis! In plain American words, it's time to pay for those smashing victories our armies have been delivering these past few months!

BEGINNING on September 9, the Third War Loan opened. It is the largest single financing program ever undertaken. Its goal is a substantial increase in War Bond purchases. Every American must be aware of the importance of this drive and understand the reasons underlying it.

You, as readers of a brand of fiction which deals with the future, are perhaps best fitted of all Americans to give this message to your fellow Americans. This Third War Loan drive is a payment toward your future, as well as the liquidation of a debt you owe today!

Further, you will never be in a better position to pay off a debt with a smile on your face!

This war has given us a national income of more than double what it was in 1939, the most prosperous year in our peace-time history. Ten percent of this increase is not enough to put into War Bonds. This is no longer a ten percent war. It's a battle for all or nothing! What will you do with this tremendous national income if we lose the war? Really, that's a silly question—every American knows full well where and what he'll be if we are defeated. In the slave mart! So it doesn't take a lot of thinking to understand that it is up to every one of us to figure out for himself how much more than ten percent he can invest in War Bonds. We all know the price of living has gone up. And we know how much. Well, set aside what you need to live on—and sink the rest of it right where the Axis won't like it; in this Third War Loan! The number 9 is supposed to be the most unlucky number of all. Let's make the Axis change that to 3. Make 'em shudder at the very mention of the number!

WE OWE it both to our country and to our friends and relatives in the Service to help them win the war and win it sooner by making the increased Third War Loan Bond purchases asked of us and making them on our own initiative, whether or not approached individually. The fighters are delivering today, and although they aren't handing us a C. O. D. slip with their victory deliveries, let's not be cheap enough to even think of accepting delivery on credit.

IT ISN'T a duty; it's a privilege. War Bonds will buy for us after the war the things we can't buy now because we're too busy fighting for our lives to make them. Every Bond we buy means something we've actually got for our future happiness and comfort. Each Bond will mean greater security for ourselves and a better future for our children. And each Bond is a bulwark against inflation; will keep living costs down, make America's future sound.

OUR boys are out there fighting, with weapons we've got to pay for. And we're being asked to pay for them with money that will be returned to us with interest after the war! Is that a break, or isn't it? Imagine being certain of getting your money back after you buy something, and still keep what you bought! You are paying for victory, so that you can use the same money to buy things to enjoy in the peaceful era to follow. Certainly you don't need to be prodded to realize that the faster we buy this victory, the sooner we'll enjoy our right to live in peace.

BACK THE ATTACK—WITH WAR BONDS
You may be sitting pretty now... but...

**AFTER WAR, WHAT?**

You are probably sitting pretty now. Almost anyone can get a fair job with good money.

But when peace comes, when millions of men come out of the army and navy, when industry converts back—where will you be? There will be keen competition between companies and readjustments of many jobs. Will you be one whom industry labels "Must Keep"—even lists for promotion?

You can be by thorough preparation now. And you can prepare in spare time, without a moment's interruption of your present job, and at low cost. Thousands are doing it—are raising themselves above the crowd.

Ask for our free 48-page booklet on the field of your liking. Get the facts about the requirements and opportunities and about our practical home study training.

WIN $1,000.00...!
$2,000.00 If you are in the Service

PRIZES TO BE PAID IN
MATURITY VALUE WAR BONDS

HERE'S HOW

On the opposite page you see an illustration. All you have to do is write a short-short story of approximately one thousand words based on what you see in this illustration! What it's all about, we don't profess to know. That's up to you. Regardless of the fact that it may even be ex-Fuehrer by the time of the contest, that is your problem, and part of the contest. Using the illustration as a springboard, write a short story which has as an integral part of its makeup the scene our artist has imagined. Usually the artist illustrates the story after it is written; in this case we reverse the procedure. Here's the illustration, you write the story to fit it!

ANYONE CAN ENTER

You don't have to be a regular reader of this magazine, nor a subscriber, nor a writer. Anyone at all, except employees of Amazing Stories, the Ziff-Davis Publishing Co., and their families, can submit one or more stories for competition. Your entries are limited only to the plots the illustration suggests. If you happen to be a member of the armed forces, any branch at all, you will receive double value, or war bonds totaling a maturity value of $2,000.00.

RULES OF CONTEST

1. Contest open to all except employees of Amazing Stories, the Ziff-Davis Publishing Company, and their families.
2. Write your story on one side of the paper only, using ink or typewriter.
3. Story should be approximately 1,000 words in length.
4. No entry will be returned. Other published stories will be paid for at our usual rate.
5. The editors of Amazing Stories will be the judges in this contest. Their decision is accepted as final by all contestants.
6. Contest editors regret that they are unable to entertain correspondence of any kind regarding entries.
7. Prize winning story becomes the property of Amazing Stories.
8. All entries must be in the hands of the contest editors at midnight of November 10, 1943.
9. Winner will be announced in the March, 1944, issue of Amazing Stories, on sale on or about January 10, 1944.
10. In case of ties, stories will be judged as to neatness, conciseness and clarity of presentation.

WIN THIS CONTEST - - AND HELP WIN THE WAR
EMPIRE OF JEGGA

By DAVID V. REED

Which side should an Earthman choose if he finds the other planets at war?

FIFTEEN minutes before midnight the batteries of searchlights were turned on, and huge white fingers began to play in the dark skies over Long Island. Columns of light flashed down to earth, sweeping briefly over countless thousands of people as if in an attempt to discover where the massed throngs ended. Deafening cheers roared over the countryside, tons of confetti swirled aloft to be caught for an instant in the lights and transformed into myriad gems. Once a shaft of light stabbed into the center of the crowds and gleamed on silver. There, resting on the ground at an
Jeggite ships swooped down to the attack...
angle, was a long, cylindrical vessel, slender as a bullet. The mob surged forward against the cordon of police that isolated the ship. Excitement burned in the night air like a wearying fever.

"And here come another party, escorted by a squad of state troopers! Listen to those sirens!"

The sirens were echoing by radio in a score of countries; half the civilized world was listening. The radio and television men filled the great colonial veranda of the Brewster mansion, and dozens of voices hummed together, describing the scene, interpreting, elaborating.

"That's Governor Horton of Texas down there, folks. He's the short man trying to duck the photographers. You may remember Governor Horton was here once before to bid Nick Brewster goodbye—last year when the Trailblazer I made the first attempt to reach the Moon by rocket ship. I don't have to remind you that Brewster stayed up in the Canadian woods that night! Look at them milling down there . . . ."

A COPY boy came running through the city room of the New York Post, two large sheets of paper flying before him, work stopping in his wake. He skidded to a stop before the managing editor's desk and faced the assembled brains of the newspaper.

"Hold up the first front page," said the editor. The copy boy raised one of the sheets in trembling hands.

TRAILBLAZER II OFF ON PERILOUS JOURNEY TO MOON!

"Okay. Let's see the alternate."

BREWSTER QUITS AGAIN!

"Fine," said the editor. "Only one change. I want a—"

"Excuse me, chief, but don't you think we're going a little too far with that alternate headline? I mean, saying that Brewster quits again. He didn't really quit last year and I don't think—"

"Whadd'ye mean he didn't quit? He damn well did quit! That first ship of his took off without him on it, didn't it? He was supposed to be there, wasn't he? And where was he? Up in that expensive Canadian hunting lodge of his, dead drunk after a five day celebration and orgy, and up to his ears in dames!"

"But he didn't tell the ship to leave without him. If he'd had a chance to sober up, and the ship had waited, he'd have gone with it."

"If! If! We don't deal with Ifs on the Post! Maybe he'd have gone, and maybe he wouldn't. The fact is that the ship left and never was heard from again. Fourteen men gambled with death on that experiment of his, and the chief experimenter wasn't there when they lost, and in my book and the public's book, that means quitting! If he goes off tonight, we run the first head. If he doesn't, we call him a two-time quitter and everybody agrees with us. Now here's the change I want. Break out that lousy story on the Treasury Department and give me a three column cut of Brewster. Here's the picture I want you to use."

The editor held up a glossy print, a picture of a young man with deep-set eyes that looked out at the world half in contempt, half in amusement, with a strong jaw that was relaxed in a lazy smile.

"Handsome rat, isn't he?" said the editor. "Run this caption under it: Nick (Sure Thing) Brewster, Millionaire Adventurer Who Reached For The Moon. Got that? Okay, where's rewrite? You got that story on the life of Brewster ready?"

"Not so it's readable."

"Read me what you have. Just the highlights."
Nick Brewster, famous, foolhardy adventurer, went the limit tonight when he took off for the Moon in the second of his two million dollar experimental rocket ships. Born with a silver spoon in a mouth usually given to sneering, young Brewster inherited five million dollars at his father's death in 1951. Six years later, according to FORTUNE'S estimate of last year, he had run the figure well up past forty million, earning the nickname of Sure Thing Brewster, leaving behind him a history of escapade and scandal, danger and enterprise.

Today, aged twenty-seven, he could call few men his friends, his unpopularity ascribed to many reasons. Chief among these were the facts of his continual absence from the United States within the past two years, his arrogance, and his often-mentioned record with ladies, the last named supposedly having chased him before he was old enough to vote. Those who knew him considered him extremely intelligent, hard as granite.

Last year, June 12, 1958, Brewster alienated more people with a single blow than ever before. Backing the invention of Dr. John Stevens for a rocket ship capable of reaching the Moon, he sank two million dollars into it. Leading scientists who examined the vessel agreed that it had every chance of success. The night the ship left, carrying Dr. Stevens and thirteen men of the crew, Nick Brewster, who had announced that he would be aboard for the dangerous experiment, was left behind.

Various stories filled the press, explaining Brewster's defection, but chiefly credited was Dr. Stevens' statement that he had received word that Brewster was in Canada, attending a farewell party so enthusiastically that he was unable to leave at the appointed time. Dr. Stevens left without him. The ship was never heard from again. When the telescopes lost it, the "Trailblazer I" ceased to exist. Its signals died away and the great magnesium flares it was supposed to light up on the Moon were never seen.

"THAT'S enough," said the editor. "Great stuff. Go on from there and work on Brewster. The inside story of the wild party in that hunting lodge, but keep it clean; this is a family newspaper. Soft-pedal the woman angle and play up the rumors. You know—Brewster never intended to go on that trip. Cold feet or something. Sure Thing Brewster never took a really long chance—"

"What about his being a hunter and explorer?"

"Hunter my foot! Say he shot tigers from behind expensive guns, explored the Arctic in ermine sleeping bags. Lives means nothing to him. Play up the way he was booed and hissed in public. Get out the pictures of him being rescued from that angry mob at that ball game in Chicago. Dig up the dirt on him. Run that story of that girl who took a shot at him in Maine—that girl whose brother was one of the crew in the first ship."

"But he never pressed charges against her."

"Because he was afraid to show his face in a courtroom! Find me a juicy financial scandal of his. Do two or three paragraphs on his chief engineer—and what's his name—Joe Abbott? Abbott's been out of a job for two years. Talented engineer, down on his luck, old classmate of Nick Brewster's, bought with gold—that kind of stuff. We got half an hour to hit the streets, so hop to it. I got a date with the television-cast of the big event, if it comes off!"
The editor switched on the screen behind his desk and fiddled the dials. The dark screen began to glow and the outlines of a panorama shot grew clearer. An enormous, well-kept estate, its shrubbery trampled, its gates broken, people everywhere, lights in the sky.

"... and still they come, folks. The roads to the Brewster estate have been closed for a week, ever since the news got out that Brewster had built a duplicate of the first Trailblazer for a new try, but right now an army couldn't keep order here! Not much time left now, if it's really going to happen. Hold on, folks, here come more sirens! It looks like... just a moment, please—yes, it's...

"I DON'T give a damn who it is," said Nick Brewster, evenly. "I don't want to see anybody."

"He doesn't want to see anybody," Joe Abbott said to the police captain at the door. The captain went out quickly, but for a moment the confusion and noise from the rest of the packed house sifted through and marred the silence that lay in the library.

"They're all here," said Abbott, quietly. "The Hollywood contingent, and Wall Street and Washington, and a couple of ambassadors and senators and governors. But Governor Horton was your father's best friend. Maybe you could see him without offending the others. He came all the way from Texas."

"To hell with Horton and the rest of them," said Brewster.

"Nick," said Abbott, "you can't just—"

Brewster interrupted him with a wave of his hand. "Not now, Joe. There isn't time. We're different people, you and I, and you won't get any satisfaction talking to me. Call it anything you like; that's the way I am, that's Nick Brewster." He lit a fresh cigarette from a butt, and his grey eyes traveled over his cupped hands to Abbott. "All the same," he added, "I want you to know that I'm grateful for the way you stuck by me."

"You paid me for it, didn't you?" said Abbott.

"Yes," said Brewster, slowly, "I paid you, but I don't think I could have bought your friendship. I've had that all along. We'll be following the Trailblazer I in a little while, and none of us knows what's in store for us. That's why I'm telling you thanks, now."

Abbott got up and walked to one of the great windows that formed a bay in the library. He parted the closed curtains with a hand and looked out. Presently, he said, "I think it's almost time. They've got the searchlights on the ship."

As he spoke, the windows shivered from the cheering outside. A door opened, and the police captain was in the library. "Mr. Whiteside says the ship is ready, Mr. Brewster. I've got an escort of fifty men waiting just outside. We've cleared the hall."

"Thank you," said Brewster. He threw his leather coat over his shoulders, and as Abbott reached him, he punched Abbott lightly on the shoulder. "Let 'er go, Joe," he smiled, and followed the captain out.

The police had pushed the visitors, distinguished and otherwise, against the walls. As Brewster and Abbott emerged from the library, a few people called to them. Brewster waved a hand perfunctorily and walked swiftly through the policed lane to the veranda. There he stopped for a moment, blinded by the series of flash-bulb explosions as the photographers shot their pictures.

"How about a smile, Mr. Brewster? Waving goodbye?"
“Mr. Brewster! Mr. Brewster! One
with you and Governor Horton shaking
hands? Just a quick shot, please!”

Before Brewster could say anything,
Governor Horton had pushed through
the crowd and had taken Brewster’s
hand. As the lights exploded all around
them, Horton said, “I’ve been trying to
see you all day.”

“I know,” said Brewster. “Were you
going to tell me what you told the Lije
reporters in that picture series they
ran on me? That my father should
have left his money to a home for mon-
grels?”

He shook his hand free, and nod-
ding to the captain, started down
the stairs on the two hundred yard walk
to the ship, Abbott following. Pandemonium broke loose. Furious waves of
people surged against the protective
dikes of police, screaming, yelling, try-
ing to get closer to Brewster. One of
the searchlights knifed down and pro-
vided a brilliant white lane to the ship.
Fantastic showers of confetti filled the
air, and the hoarse voices of tens of
thousands hammered like a gigantic
drum. Brewster walked on, head down,
looking neither to right nor left, as if
there was no one there. When he
reached the glistening ship, Abbott
catched his hand and held him at the
massive lock long enough for the pho-
tographers to shoot a few pictures, then
both men went in.

Inside, Harry Whiteside, who was
Abbott’s assistant, gravely shook hands
with both men, then turned the power
screws that sealed the lock. The rest
of the crew was ready, most of them al-
dready strapped in their heavy belts.

“Fire the port tubes,” said Abbott to
Whiteside. “That crowd out there is
too close.” He led Brewster forward
to control room, and as they got there,
a muffled series of blasts went off.

Looking through one of a row of cir-
cular portholes in the outer bulkheads,
they saw the crimson flash of the
rockets light up the countless faces out-
side, and the crowds melting away, as
if from the heat of the tubes.

Abbott adjusted mouthpiece and ear-
phones. “Set?” he spoke into the phone
at his lips. “Fire in order, one to six.”
The blasting grew louder, and the peo-
ple had disappeared from view. “Fire
in series, one to twenty.”

Instantly, the blasting increased un-
til it was a steady, splitting thunder.
The crimson became tinged with yel-
low, then faint bits of blue edged into
the flames that ringed the ship. One
by one, the searchlights had faced the
slender hundred-foot length of the ship,
but they scarcely paled the fire.

“Cease fire and stand by,” said Ab-
bott.

The silence seemed overpowering.
Nothing existed now except the metal
bulkheads of the ship’s bowels, gleam-
ing in dull convolutions of coils and in-
struments and meters and dials, and
outside there was darkness pierced by
a circle of cold white eyes. Abbott
pressed a finger down on a switch, and
they could hear the quiet mesh of gears
as the prow of the vessel began to tilt
heavenward. Brewster fastened his
belt and stared out of a porthole. The
ship stopped moving at a sixty degree
angle.

Over the flat horizon, a fat rust-col-
ored autumn moon waited serenely. A
thin layer of clouds lay high in the sky,
tinted underneath with soft orange.

“Aft tubes only, one to seventy. Fire
together.”

It was over a moment after it had
begun, but the moment was an
eternity of pain. There was a single,
all-encompassing sound, and something
tore at their hearts and throats. There
were endless seconds in which there was no sight, and a mist through which glittering objects began to take form, a copper wire, a red-gleaming light. There was a moment when being ceased, and ever so slowly, thought became possible, and sluggishly, memory returned, and Brewster remembered the distant moment after Abbott had last spoken, and then he had turned in his belt and grinned somberly and tried to shake hands. And Brewster remembered how he had thought: how calm Joe’s voice is. Then agony, dull and insistent and gnawing, and the strain against the glassite belts was beginning to ease and they could hear it creaking softly.

In the vast stillness that followed, Brewster wiped away the tears that had streamed down his face. His vision sharpened, and he saw Abbott before him. Abbott’s face had frozen in a mask of astonishment, and the first tiny cracks of fear were appearing in it.

“Look!” Abbott whispered.

But Brewster had already seen it. It was no trick of his eyes, no after-image. The moon, white as plaster, was an enormous ball, a sphere so great that it completely filled the sky. There was nothing but its unbelievable immensity ahead.

“What’s happened?” said Brewster.

Abbott turned to him slowly and shook his head. “I don’t know,” he said. “Something’s gone wrong! We’re much too close!”

He turned to a screen that projected the rear view from the ship and switched it on. The screen flashed on an image of a city. They saw a river separating the city, and they could make out bridges, the faint phosphorescence of a ferry’s wake in the water, houses, lights.

It was impossible! They couldn’t be so close to Earth! Their initial velocity should have taken them far beyond such a view or the ship would have dropped back to Earth before it had cleared the atmosphere! And yet the moon was so enormous before them that they must have been very close to it.

“Is there a telescopc lens in the projector?” asked Brewster.

“No,” said Abbott, trying to shake off his daze. “We’ve got to go aft and see what’s happened.”

He unhitched his belt and started to take a step, then suddenly he grabbed at the belt and held on. His feet had left the deck completely, and he was floating in mid-air! He pulled himself down, and all at once Brewster was laughing. Abbott looked at him in wonder, and the laughter had done the trick.

“Forgot,” he mumbled, half grinning at Brewster. “We’re in free space. You’d better put those magnetized shoes on too.” Hurrying now, he unfastened two pairs of metal-shod shoes from a tier on the bulkhead and threw a pair to Brewster. A moment later, both were clambering down the companionway.

“Joe! Mr. Brewster! Follow me—quick!” Whiteside had come running from the stern and met them halfway. They followed him back to the aft observation room. Half the crew was there, staring out of the large portholes.

There, as it appeared, directly behind them, was the Earth, a dark, blue-green ball. Its proportions, when they could maneuver themselves into such postures as to see all of it at once, were unbelievable. Sometimes they could see all of it, then, by moving their heads an inch or so, they lost the mass and saw only a segment, but with such clarity and in such detail that it could have been possible only from an airplane hovering a few miles above Earth. It was utterly impossible to see both the entire diameter of Earth and
yet be able to see segments of it in such powerful magnification. But they were seeing it.

"That city we saw before," said Peters, "the one with the river running through it—that was two cities, St. Paul and Minneapolis. I know them inside out. It was like looking through a magnifying glass."

"Like... looking through a... magnifying glass," Brewster murmured. He shifted his head a bit. "It keeps happening. Suddenly you get a new angle and everything grows sharp... they way I thought I saw the Andes mountains in South America, as if it was a relief map, close to us... ."

"Stand over here," said Steinberg, "just where I am. See it? That's Manhattan! There's the Washington Bridge, and the Hudson, and there's Newark Bay. And if you move just a bit to the right, you can see Long Island—and those searchlights from where we took off!"

Abbott brushed a hand across his face. "It just isn't possible," he repeated. "Maybe the instruments have a clue to this." He turned to the crew, whose faces revealed the same bewilderment that lay on his. "Everybody back on duty," he said. "You can tell your alternates what's happening, but keep your heads. We'll work it out and let you know."

He started after Brewster back to the control room.

Abbott's practiced eyes swept over the banked array of instruments. Slowly he sank down to his chair and spoke into his phone, his hands trembling as they held the mouthpiece.

"Harry? Fire all bow tubes. Immediately."

Whiteside's puzzled voice rang from the earphones from where they lay on the control board. "Did you say bow tubes?"

"Yes. Quickly."

"But we've got all the stern tubes firing in series and they've been set for the next six hours. You may interfere with the acceleration and the—"

"Those are orders."

"Aye, aye, sir."

"Acceleration... ." Abbott breathed heavily, staring at the control board. "We've got to stop it somehow. . . ."

Nick Brewster crossed over to him, and seizing him by the arms, he shook Abbott. His voice was cold and decisive when he spoke. "Snap out of it! What's wrong?"

"Wrong?" said Abbott, slowly. "Everything's wrong. Everything but these instruments, and they check each other. And if they're right, I think I know what happened to the Trailblazer I."

"What happened?"

"Look at the planometers. The one that measures our distance from the moon. Now look at the timer. We've been up eighteen minutes. Our initial velocity was 7 miles a second. Allowing a gradual deduction we're traveling at approximately 25,000 miles an hour."

"What are you getting at?"

"Look at the planometers!" cried Abbott. "Eighteen and a half minutes now—and we've covered 7770 miles. But look at our distance from the moon—50,230 miles! Don't you see what that means?" The veins in his throat were like iron bands. "The moon isn't 240,000 miles from Earth! It's less than 60,000! If our instruments are right—and everything points to it—then in a little more than two hours we'll crash into the moon while we're still accelerating!"

CHAPTER II

NICK BREWSTER gripped the steel arms of his chair. "What are you
talking about?” he demanded.

“It’s all there in the instruments,” said Abbott, hoarsely. “They all check. The distance from the sun to Mars isn’t registering as 141,000,000 miles. It says 33,000,000! The distance from the sun to Mercury isn’t 36,000,000 but less than a fifth of that! And the vast distance from the sun to Neptune—almost three billion miles—registers here as less than a thirteenth of that distance!”

“The instruments have all gone haywire,” said Brewster. “Even the ratios are wrong!”

Abbott kept staring at the control board. “Are the instruments wrong?” he repeated. “We have evidence here to show that they’re right. We know the moon is in reality very close to us now. We have only to look out there to see that the meter reading 49,310 miles must be correct. Its size alone tells us that.

“And now, look through this observation porthole—there—to that green star, that enormous ball of cold fire. It could only be Neptune, and according to our charts, it is Neptune. But Neptune should be invisible to the naked eye! Why do we see it so clearly? Why is the moon so close? Both the instruments and our eyes tell us the same story. Only the measurements that we always accepted seem wrong. The measurements must be wrong!”

“But what about the way we see Earth?” asked Brewster.

“The same thing,” Abbott nodded. “When we see all of the Earth, we see it as it should be seen from 8,000 miles away, where we now are. The flaw here is the way we suddenly see parts of it so closely. We know, however, that we can’t be as close as we seem to be at those times because our initial velocity, without which we could never have left Earth, must have taken us far beyond the detailed view we get. Our first two seconds of flight carried us beyond such close views.

“So something, some agent we don’t know about, makes it appear that we are much closer to Earth than we know we are. That same thing has always made everything else appear much farther away than we now know they were! Something warps our point of view... and there’s only one answer to that that I can see.”

Brewster waited for him to continue.

“It can only be that the dense atmosphere of the Earth acts as a lens,” said Abbott. “Looking out into space from Earth is like looking through the wrong end of a telescope. Can anything be measured accurately when it’s seen through a magnifying lens—a lens that’s been turned the wrong way?”

Abbott switched on the rear view mirror again and both men looked into it.

“Now,” Abbott continued, “we see that the converse is true. The reason we suddenly see large segments of Earth so clearly is because we catch the lens right. When we do, we see details that only a tremendous magnification could show. It adds up...”

Brewster said: “Then we’re going to crash?”

Joe Abbott nodded. “We allowed six hours for acceleration and four to ease off in. We set the tubes that way and there’s nothing we can do about it. We’re less than two hours from the moon.”

“And that,” said Brewster, quietly, “is what happened to the Trailblazer II. Without any means of communicating with Earth while she was in space, she went to her doom.” He pronounced the last word hollowly, as if he were mocking it. When Abbott looked at him, because of the way he had said it, Nick Brewster had a faint, bitter grin on his face.
HALF an hour later the moon had grown so large they couldn’t see all of it at once. It looked like a great ball loosely wrapped in shrivelled, pock-marked skin, and given a slight rosy color by the jets of flame from the fore rockets.

"Is there a chance?" said Brewster.

"Very slim. We have more power in our fore rockets than the first Trailblazer, because we thought maybe that was one of the reasons she didn’t land safely and we—"

"You’re repeating yourself," said Brewster. "Don’t give me that engineering crap again. Just answer the question: is there a chance?"

"I won’t know for another half hour."

Without a word, Brewster got up, lit a cigarette, and walked out of the control room. Presently he came back, hugging a heavy wooden case which he had evidently taken from the supply hold. Then he sat in his wicker chair across the long, narrow room from Joe Abbott, looking out at the moon and occasionally glancing at the timer as the slow minute hand turned on its axis.

When the planometer passed 16,000 Brewster said, "Well, Joe?"

Abbott shook his head grimly. "If we had another hour and a half, maybe some of us could live through the crash. We’ve decelerated 6800 miles per hour, and at that rate—"

"Save it," said Brewster. "At that rate only posterity will be interested in the figures, and none of us are going to be part of posterity. Call the crew together here. All of them."

He took a wrench from the tool rack and smashed open the case, pausing long enough to allow Abbott to pipe the crew. Then, strewing fistfuls of straw over the metal deck, he started to take out a bottle when he saw the straw rising weightlessly from the deck and moving slowly up to the overhead, where, for some reason, it clung. When the first of the crew came into the control room, Brewster was laughing.

"Look at that," he pointed. "I wondered where any cigarette butts disappeared to. Thought someone was cleaning up after me."

One by one the crew came into the room, until all twelve were there, standing quietly in the narrow confines along the panels of dials.

"I’ll make it short and sweet, men," said Brewster. "We’re going to crash on the moon in about an hour. If you’re interested in finding out why, Joe Abbott can tell you. It’ll give you something to do. If you’re not interested, maybe you’ll take my suggestion and one of these bottles, and to hell with it. Some of you have been with me before, some of you haven’t, but I know, having chosen you carefully, that none of you is afraid to die. If you want it, here it is: the best Scotch on the market, twenty-year-old stuff. Only hold on tight to it, or you’ll have to go after it with a ladder."

Holding the case between his legs, Brewster passed the first bottle to Drake. "Thank you, sir," said Drake, tersely. They followed him in line, Morrow, Oberman, Rogofsky, Peters, Callahan, Lindstrom, Steinberg, Fredericks, Stewart, Purdom. Harry Whiteside was last and he smacked his lips appreciatively. Some of them spoke, most of them were silent. They sat down on the deck, against the bulkheads, keeping their metal-shod shoes as flat as they could.

"Have one?" asked Brewster.

"Don’t mind if I do," said Abbott. "Keep the cork in between drinks," said Brewster. "Here’s how."

A few minutes later, Brewster went out, returning soon afterward with a portable phonograph and a batch of records. "Had it specially built for this
trip,” said Brewster. “It has springs to keep the pickup in position.”

He stood over the men, looking down at them, watching the way their eyes kept turning to the planometer. Brewster was an uncommonly tall man, a little over six foot three, and standing there now he looked taller than ever, and with the little, bitter ironic smile on him and his cold eyes, he looked almost satanic.

“Joe,” said Brewster. “Switch the planometers off. Nobody’s really interested in them anymore.”

Abbott threw in several switches, and the moon planometer froze at 13,441. Then he got up and pulled steel shutters down over the face of the observation ports. The brilliant whiteness that had been pouring into the room gave way to the blue-white of artificial light. The phonograph whirred quietly, and a dance band played one of the current hit tunes. Brewster turned it up louder and began to whistle along, pausing now and then to uncork his bottle.

He was putting on the third record when Stewart suddenly got to his feet and hurled his bottle at the moon planometer. “Why doesn’t it move?” he shouted. “I’m not afraid! Let it move!” The bottle had smashed into bits, and the fragments of broken glass and the liquor hung in odd shapes near the planometer. “Damn it!” Stewart raved. “Damn—”

Nick Brewster took two quick steps to Stewart, spun him around by his arm and smashed a fist into his face. The impact of the savage blow was enough to knock the man off his feet, and as he fell unconscious to the deck, Callahan tied him down with a glassite belt. The third record began to play, and Rogosky and Oberman sang the words thickly.

Minutes passed, and the odor of Scotch whiskey grew heavier. Several others had joined in the singing. Morrow kept time by beating his bottle gently on the deck. Rogosky’s eyes were closed. It was very noisy now with the singing and the music, and Abbott leaned far over in his fixed chair and tapped Brewster.

“Drunk?” he asked.

“Only my first bottle,” Brewster grinned, mirthlessly. “I wish I were. My doctor used to tell me that someday I’d be sorry if I kept drinking. Well, I’m sorry now, because now it’s going to take too long to get drunk.”

“Zat all you’re sorry for?” asked Abbott, swaying the least bit.

“That’s all.”

“You’re a hard guy, Nick, a really—”

“Cut it,” said Brewster, sharply. He smiled again. “I’m afraid I have to give you the same answer as always: there isn’t time now. We pioneers don’t philosophize, do we, Joe?” His lips curled sarcastically.

“Tell me one thing,” Abbott persisted. “You went on this ex—exped . . . ishun just to show them up, didn’t you? Just to sssshh ’em up.”

“No,” said Brewster. “I went because I wanted to go. It was as simple as that. I know you don’t understand it.”

Abbott’s head rolled loosely. He took his thumb off the neck of his bottle and took a long drink. Then he sat there, staring at nothing.

The Trailblazer II went plummeting down. Little by little, the singing died away. Fredericks lurched out of the room, and they could hear him retching in the companionway. The lights twinkled and dimmed and never recovered their full power. In the silence a steady hum had become audible, as if it were the momentum of the ship itself making itself heard, crying a song
of death as it hurled its long, sleek length down toward the lifeless world below. The phonograph played on.

Brewster had lost all sense of time when he got out of his chair. The end was moments distant, he knew vaguely. His mind was clear and awake, and a thousand swift thoughts raced torturously through the various levels of his consciousness. Even now, he knew, he was unable to accept the inevitable blindly, and though part of him recoiled at the notion that had seized him, his desire to know what was happening was stronger—to be there, a final witness to catastrophe, though the evidence would be buried with him.

His mouth was a thin, set line as he raised an edge of the steel shutters and looked through. For a moment he was blinded by the impact of whiteness on his eyes. He saw only an illimitable expanse of chalky land, the outlines blurred with the colors of the spectrum, and colored concentric rings swimming up toward him. Then he saw the surface of the moon, its placid sweep of empty valleys, its dry ravines, its mountains like ivory sculpture. . . .

It was during these fleeting instants of sight that Brewster realized that the ship had stopped falling . . . that she hovered perhaps a hundred feet over the surface of the moon!

Dazed momentarily, Brewster let the shutters fall, and whirling around, he climbed through the squatting men and raced down the companionway to the stern of the ship. There he saw that the aft rockets were still spitting their powerful fire. There was power enough in them to have buried the ship in the crash . . . but they hadn’t crashed! What had stopped them?

The ship was levelling off! Slowly, the stern came down until the vessel was hovering parallel to the surface! It continued to drop foot by foot, as imperceptibly as an elevator, until it was no more than fifty feet in the air. The force of the rockets was being uselessly spent in the atmosphere: they had ceased to affect the ship at all!

And something, some prodigious might not resident in the ship had cushioned and eased and stopped its momentum, and was now holding it in its grasp!

Staring down, Brewster knew that his eyes were playing tricks on him. It had seemed to him that there had been movement below, that the soil had shifted, and that the white rocks were moving—then the shattering realization was on him—because the rocks had moved! Only they weren’t rocks! They were beings of some sort, life!

Suddenly two thin bars of white substance reared up from the ground, higher and higher, until the topmost ends leaned against the sides of the ship. There were crossbars all the way up—it was a ladder! And now, separating itself from the ground, something white was climbing up that ladder to the ship!

SPELLBOUND, Brewster watched the being come up. It was only when the thing was a few feet below that he saw it was human—or as near human as any living creature could be without actually being human. It was a man, no more than five feet tall, with a pale skin and deep, luminous, black-red eyes, and hair the color of platinum. He was swathed in a voluminous white cloak that blended perfectly with the landscape, and it was only when his head appeared from under the cloak that Brewster understood why he had thought at first that the rocks were moving.

When the man had climbed to the level of the ship, he clenched his hands and began beating against the sides.
Brewster heard the faint boom of his hammering and did nothing. The man reached inside his cloak and held a cone-shaped rod in his hand, and from the apex of the cone a thin, green stream like liquid fire played on the metal sides. It had no effect on the ship.

Then, quite by accident, though the man seemed alarmed and was looking about, the man’s eyes lifted until he looked through the stern port where Brewster was standing, and his eyes met Brewster’s.

What was he saying? Brewster gazed into the ruby eyes and watched the little man gesticulate and mouth phrases. He was trying to tell Brewster something. He was indicating that Brewster come down, that he leave the ship. Was this, thought Brewster, one of the beings responsible for the mighty force that had inexplicably saved the vessel? Why was he so perturbed? What made him assume that Brewster, or the men in the ship, were friendly beings? Why did he seem to think that they could leave the ship at all?

His mind working slowly, still unable to comprehend fully what had happened, Brewster gazed at the man and saw his chest moving, saw his nostrils dilate. He was... but of course he was breathing. Why shouldn’t... Brewster shook his head violently. He had to be able to think clearly. The man was trying to tell him something, something that was evidently of great importance.

Suddenly Brewster had made his decision. Back he ran, down the ship, to the vaulted doors of the air lock, paused a moment, then went into the control room. The men looked up at him in a stupor. It would be impossible to rouse them. He opened a stowage chamber and began piling out oxygen helmets and tanks. Laboriously, he fixed a helmet on each of the men, and took one himself.

Joe Abbott stirred and looked through his helmet at Brewster. His eyes unconsciously darted down to the wrist watch he had hidden under a sleeve of his leather coat, and suddenly he was roused. He got up unsteadily and took Brewster’s arm.

“What happened?” His voice echoed through the helmet speaker with metallic resonance.

“See that the men are all right,” Brewster snapped, “then come to air lock!” Something was telling him to hurry.

When he got back to the lock there was no hesitation. He threw in its power switch and stood back. Slowly, the massive door began to swing open. Brewster had fastened a glassite belt around his middle, expecting a tremendous rush of air from the ship to the outside, but when it came its mildness amazed him.

With the door opened, he gripped the edge and peered out over the side. There was no movement down below, but the man on the ladder at the stern was still there, still hammering. As Brewster’s helmeted head stuck out of the ship, the man saw him.

All at once, another ladder seemed to raise itself from the ground, reaching up to the lock. As the first man swiftly slid down his ladder, a second appeared, climbing up the new ladder. Up he came, several rungs at a time, until his head was level with Brewster’s feet. He looked up at Brewster, and Brewster’s hand tightened on the automatic pistol he held.

“Quick!” said the man. “How many of you are there?”

He had spoken in English... in slightly accented, yet unmistakably accurate English!

“Answer at once!” the man cried. “How many?”
"Fourteen," Brewster choked. "Take them out at once!" the man cried. "Come down below to us as quickly as you can! Your lives depend on it!"

Brewster turned back toward the control room, and in turning he bumped into Joe Abbott. Abbott was standing there as if paralyzed. "Come on!" Brewster shouted.

CHAPTER III

BY THE time Brewster had half carried the first of the crew to the lock, the man had disappeared from the ladder. When he looked down there was no one in sight!

Brewster regarded Abbott and said, tersely, "You're too unsteady. Get the men in here. I'll carry them down." He lifted Stewart's inert form over his strong shoulders and lowered himself to the ladder. The ladder was as smooth as glass to his touch. It was a long way down.

Reaching bottom, he stepped carefully on the crusty soil and deposited Stewart, then quickly went up again. Almost at the top, he glanced down. Stewart had disappeared, and on the spot where Brewster had left him, only his helmet remained!

Suddenly the soil moved, and Brewster saw what had happened. There were many men down below, all of them carefully camouflaged with white cloaks. When they lay quietly on the ground, and the stiff cloaks formed haphazard folds, they were indistinguishable from the terrain. One of these men had hidden Stewart with a cloak. Now he reached for the helmet he had taken off Stewart and covered that.

Startled, Brewster climbed into the ship and took off his own helmet. The first experimental breath reassured him. The air was cold and dry, but sufficiently dense to breathe. He found nothing strange in this; matters had long since passed the stage of normal reaction.

Several men had already assembled at the lock, and Abbott came in, dragging Tom Drake. "You think you can go down yourself, Peters?" said Brewsters. "And you, Callahan?" Both men nodded, though they seemed to be having trouble standing erect. "Go ahead," Brewster said. He lifted Drake like a sack and slowly edged back on the ladder. By the time he had reached bottom, Peters and Callahan were gone. He put Drake down, and a cloak swirled up and hands pulled Drake away, under it.

He started the long, perilous climb up again, fatigue pulsing through him, numbing his body. Abbott had taken the helmets off the others and had doused them with water, but only Purdom seemed to be aware of his surroundings. Lindstrom had struggled to his feet, and Rogofsky was blinking his eyes and groaning weakly. The others were too drunk to move or do more than look around, stupefied.

At a word from Brewster, Purdom started down, and Lindstrom, staggering, went after him. Doggedly, Brewster lifted Rogofsky up and went back to the ladder. He saw only Purdom climbing down, halfway from the ground. A few feet from the bottom of the ladder he saw Lindstrom. He had fallen and hit the ground in a grotesque posture. A cloak moved to him and covered him up, and the man who had been under the cloak began to climb swiftly up the ladder.

The little man reached the ship. "Leave the others!" he said. "The Jeggites are coming. To be caught by them is death!" He pointed toward the horizon. A clustering group of dark stains were advancing.
"But we can’t leave these men here!" cried Abbott.
"Help Rogofsky down, Joe," said Brewster, quickly. "I’ll take Morrow instead."
"But what about—"
"We’ll come back for them."
He eased Rogofsky down after Abbott. The moment they were clear he ran down the companionway to the stowage hold. A moment later, carrying an enormous carton, he returned and stooped down under Morrow, adjusting both burdens. Powerful as he was, his face tightened in pain as he reached the ladder, and oddly enough, a single thought went through his mind. With the lesser gravity of the moon he should have felt much more weightless, much stronger. But he felt only weariness, and the ground below seemed to waver as he gripped the ladder with one hand.

The little man remained in the ship until Brewster was halfway down, then followed. He jumped down the last rungs and began tipping the ladder over. Abbott cried out and clutched the ladder, starting to say something, when Nick Brewster gripped his arms. Abbott wrenched free and Brewster pursued, winding his arms around Abbott’s throat, pulling him down.

From somewhere a huge cloak was thrown over the struggling men, and hands pulled at them until they both fell over, lost in the folds and choking in the swirling particles of dust. Relentlessly, Brewster tightened his murderous embrace.

"You must be quiet!" a voice close to them whispered. "Our one chance against the Jeggites is surprise." A body moved cautiously, close to them, parting the folds until a transparent portion of the concealing cloak was disclosed... and suddenly, Abbott stopped fighting.

There, on the brow of a hill, thirty yards away, stood three strange vehicles. They looked like deep bowls balanced on a tripod of three wheels. They were colored a dead, dusty white that might have remained invisible even though they had stopped on the crest of the hill and higher hills behind them had to supply protective blending. But men came out of the vehicles, four men out of each of them, looking up at the Trailblazer II.

They looked like men, though they were utterly unlike the little white men who had concealed Brewster and the others. They were tall, at least six feet in height, dark-visaged, and dressed in tight-fitting uniforms of black, shining cloth, with peaked caps on their heads.

Brewster felt the anticipatory chill of danger as he regarded them. These were undoubtedly advance guards of the larger group that he had seen from the ship. They seemed uneasy as their eyes swept the valley below the vessel. They waited for minutes, without speaking to each other, until the larger party reached them.

There were perhaps fifty men all told, standing abreast in a long, precise column that extended over the hill. As they started down into the valley, behind them an enormous vehicle rolled up to the crest. It was made of a dull, reddish, substance, mounted on numerous wheels, its sides covered with gleaming instruments beside which black-clad attendants walked, keeping pace with the machine. From the top of the machine protruded a squat, hollow tube like a cannon, revolving with the ease of a weathervane as the vehicle moved, so that the tube remained always pointed at the Trailblazer II, high above them.

BURNING with curiosity, Brewster watched the long column march
into the valley. He felt an intense admiration for their precision, for their silent thoroughness. They were military men, he knew, and . . .

At that moment, without an instant’s warning, dozens of fiery green streaks of light blazed into being! There was a scarcely audible hissing sound, and more than half of the advancing column tumbled over and rolled down the rest of the hill. Half the remaining men fell flat on the ground, taking whatever cover was afforded by the lined, pitted valley, and from their hands, holding small cones, came an answering fire—not a haphazard, wild spray, but a series of patient thrusts, each to one of the spots where green light had issued.

The other half of the platoon raced back to the bowls, but before they had reached them, the peaks that surrounded the valley, that towered over the low hill, were filled with more of the green, thin flames. Man after man slumped over as the concealed fire kept blazing. There was no knowing which arid spot of land would suddenly become a deadly stream of fire. But the men in black never wavered, never broke.

Somehow they contrived to give each other a secret signal, and all together they began backing to the vehicles, firing steadily as they retreated. Of the more than fifty who had been there a moment before, three lived long enough to gain their vehicles. Of these, one toppled over at the door. The second vehicles remained where it stood. The third whirred and slowly moved away.

Immediately there was action in the valley. Scores of cloaks were swept aside and gathered up. The man in Brewster’s cloak scrambled to his feet; he was holding a cone he hadn’t had occasion to use. There were hundreds of the little men in the valley. A large number of them, more than twice the number of the dead tall men, had been killed, but the outcome of the battle had never been in doubt. The tall men had been outnumbered at least six to one.

Already many of the little men were running out of the valley. Numerous voices called out in English for the men from the Trailblazer to follow. The men hesitated in confusion, for though the monstrous battle they had witnessed had swiftly restored their minds, they heard Abbott shouting for them to wait—and they saw that somehow the Trailblazer had settled down until it now hovered no more than ten feet from the ground!

Abbott was running back toward the ship.

“Go back!” a dozen voices screamed in alarm. “There is no—” Several of the little men were running after him when Brewster knifed through their ranks, hurled his body forward and brought Abbott down.

At that moment the Trailblazer’s bow kicked into the air. A muffled explosion roared out and a jagged hole appeared just short of the prow. A second, than a third blast rocked the ground together, and the thunder of the explosions, freed by the gaping wounds in the ship, rolled out from the stricken vessel with such force that the rush of air alone knocked scores off their feet. Again and again some mighty agent within the ship roared, blowing away huge sections of metal, strewing the valley with debris and dust. Finally the midship smashed apart, flying in every direction, and seeming to do it so slowly that it looked like a terrible flower blossoming. . . .

When it was over, and Brewster and Abbott arose, they saw, without fully understanding, that many of the little men had been killed by the
convulsive explosion of the ship. And of their own, Morrow’s face had been splattered away by a chunk of metal. He lay dead, a few feet from the remains of Lindstrom.

Four men had been left in the ship. There was nothing there now but sections of molten carcass. A fire licked yellowly in the white sand.

His head still reeling from the impact of the sound, Brewster heard faintly the cries of the little men. They were pointing to the direction from which the Jeggites had come. Far off, a new black wave was speedily advancing toward them!

Brewster remembered little after that. He and the others fled, following the little men. Misty impressions remained in his mind; the sight of many little men who stopped running and lay down again under their white cloaks, waiting to ambush the new pursuers. The pools of drying blood... the sudden surge of bitterness as he remembered leaving the carton behind... the tremendous exhilaration he felt when he finally climbed out of the valley, as if he were flying, for every step sent him bounding into the air, covering twenty feet at a leap!

It was the same for the others from the ship—as if invisible shackles had been broken. They leaped high above their guides, frequently outdistancing them and forced to wait. Once, when Brewster looked behind, he saw green flame again in the valley, and dark bodies falling. And then, running into a tortuous zigzag of peaks, a small cavernous opening gave from a mountainside, and they were following the little men into the shelter of darkness...

“YES,” said Brewster, slowly, staring down at the two mutilated bodies. “Their names were Hoake and Worth. They were combustion engi-

neers on the first Trailblazer with Dr. John Stevens...” The corpses were mummified and shrivelled, the features scarred and broken.

“You see,” said the little man, earnestly. “Only six survived out of the entire crew. Though the Jeggites had been waiting for a ship to leave your world for centuries, they were unprepared when it came, and it crashed. Of the six survivors, we know that Dr. Stevens is still a prisoner of the Jeggites, and perhaps three others are still alive.” The little man’s eyes glinted as he looked at the bodies. “But these two men were tortured to death. We stole their bodies from a ship that intended to carry them away...”

“But we don’t undestand,” said Abbott. Wearily, he brushed a hand across his face. “We don’t know what you’re trying to tell us. All this about the Jeggites and... We don’t even known how you speak our language...”

Abbott turned to Brewster, as if to speak to him, but changed his mind when he looked at Brewster’s curious expression. Brewster shrugged as if to say that it was useless. They had been talking to one, then another of the little men, and the hurried conversations had all been the same—nervous, repetitious explanations that got nowhere, that explained nothing ultimately, though they seemed overburdened with fact.

All that time there had been feverish, though it seemed aimless, activity around them. They were standing in one corner of an enormous-domed cavern, and there were scores of the little men about. They had been leaving and arriving in steady streams through the winding catacombs buried in the bowls of the mountain. Many of them sat along the tiers that formed an amphitheatre of the cavern, little beings
wrapped in their white shrouds, looking pale and ill in the light that flared from numerous torches.

“But you see we do speak your language,” said the little man, as if he were helpless in the face of the fact. “Our spies among the Jeggite servants learned it from the men of your first expedition, and the Estannar teachers taught it to all. People of all the races can speak it. We learn it as the language of freedom.”

“What kind of freedom?” said Brewster.

The little man frowned and looked more helpless than ever. He answered in a tone that implied that his answer was very obvious. “We want only one freedom—freedom from the Jeggites.” His anxious eyes looked from Brewster to Abbott and traveled along the faces of the other men. “You do not believe me,” he said, “but soon one of the Estannar will be here. He will tell you the same things, and then you will know they are true.”

He gestured toward the mumified bodies. “That is why we kept these bodies—to show you that we spoke the truth, and that you must go with the Estannar when he comes to take you away.”

“Take us away?” said Abbott, perplexed. “Where?”

“To safety, where you can help in the plan of the Estannars.”

“Who are the Estannars?”

“They are our teachers. Some of them were sent here to live with us and direct our tasks. Everyone knew that once a ship had come from your world of Kren, others would follow. The Estannars worked out the plan to steal you from the Jeggites.”

ABBOTT groaned in despair. He said to Brewster: “What do you make of this mess?”

“Save your breath,” said Brewster. “Can’t you see they’re all idiots? He’s told us a dozen times that these Estannars rule them, and one of them seems to be expected, so let’s wait for that.”

“You do no understand,” said the little man. “The Estannars do not rule us. Only the Jeggites rule.” Hatred blazed in his voice so fiercely that it gave a new dimension to this vapid, muddled being. “The Jeggites rule the Borons, Estannars, Ermos, Phylades, Hruthes...” He broke off, as if unable to continue a list so terrible to him.

Sudden, keen interest flickered on Brewster’s expressionless face. “You mean these Jeggites rule the moon, and all the races of the moon are rebelling against them?” The little man nodded and would have spoken if Brewster had let him. “Think of it!” said Brewster, softly, with an ironic twist on his lips. “The barren moon! Hundreds of thousands of people of different races, locked in a terrific fight against one of them!”

There was a fresh burst of activity at the far end of the cavern and a string of torches emerged from one of the tunnels that gave into it. As if it were a long awaited signal, the men seated in tiers rose and a subdued murmur swept up into the half-darkness.

The torchlight revealed a man walking quickly toward the group of humans. His rapid stride parted the white cloak, which, like his torch-bearers and escort, he wore, and revealed an undergarment that looked like a suit of mesh armor, composed of hammered, beaten rings, gleaming as bright, fiery gold. He was scarcely taller than the men around him, but he appeared to tower over them. It might have been his erect carriage, or the way he held his head—he had a high, impos-
ing forehead and wore his blond hair short—but whatever it was, there was something purposeful and strong about him.

When he stopped before the Earthmen, standing on the other side of the dead, leathery-hued corpses, and looked at each man individually, they met the frankness of his steady, blue eyes. He was a very handsome man by an Earthly standard, which was the only standard one could have applied to him, for there was no difference at all between him and an Earthman.

He said: “Do you have a spokesman?”

“I’m the spokesman,” said Brewster. “I am Dramon, an Estannar. Tell me your names.”

THE Estannar stepped around the corpses and shook hands, like an Earthman, first with Brewster, then with each of the men as Brewster gave their names: Abbott, Stewart, Peters, Callahan, Drake, Purdom and Rogofsky. “There were six more of us,” said Brewster, “who were—”

“I know,” said Dramon. “They were lost in your escape from—”

“Four of them were blown up!” Abbott interrupted suddenly. The anger and baffled helplessness that had churned in him overflowed, as if here, finally, was someone who could be held accountable. “We don’t know where we are,” he said, “or what we’ve gotten into, but whatever—”

“Suppose you let me tell you,” said Dramon, quietly. A brief smile lit his face up. “We seem to be interrupting each other. Since we have little time now, and I have the answer to the countless questions I know must be in your minds, let me tell you what I think you have to know immediately.”

He made a little gesture with his hands and he said, “You have been plunged into a situation of enormous complexity. At this moment the most important element of that situation is its danger. Though you have had no part in its creation, that danger threatens you more immediately than any of us. I speak not only of the danger to your lives. It is much more than that. But since I cannot undertake speaking to you now, I can only ask for your trust and your willingness to follow me.”

“Where?” said Brewster.

“I want to avoid the questions that must follow that answer.”

Brewster said: “I’m afraid you can’t avoid them.”

“Very well,” said Dramon. “Our plans are almost completed. We are taking you to Estannar.”

“I thought Estannar was the name of a race.”

Dramon breathed in audibly. “It is also the name of the place where that race lives. You know Estannar as the planet Venus.”

In the stunned silence, the Estannar’s intelligent eyes traveled over the semi-circle of men before him. “Yes,” he nodded, slowly, “it is an overwhelming conception for you. I understand . . . .”

“The universe is filled with life—life that will appear familiar to you, and life so strange that its existence will be utterly incomprehensible. There are different races on each of the planets, and there are many breeds among these races. All the life of the universe, save yours, is the domain of the Jeggites—the inhabitants of the planet you call Mars. The Jeggites . . . the Martians . . . are the lords and conquerors of the universe.

“The Martians have waited centuries for mankind to come, for only you can help them complete their conquest. Only through you can they hope to
conquer the planet we call Kren, and which you call Earth.”

NICK BREWSTER tried to find coherence in the chaos of his mind. He looked away from the blond man before him, then he looked back again. His lips moved uncertainly, and finally he laughed. It was a troubled laugh. He didn’t know where to begin.

He said: “You’re saying that you—I mean all of you, these different races you speak of—can space-travel?“

“Interplanetary commerce existed a thousand years ago. Our sciences developed differently, more quickly on some planets than others but in many ways interplanetary science far outstrips your own. The destructive power alone of the Martians is prodigious, though—”

“If the...the Martians,” said Brewster, pronouncing the word hesitantly, “wanted to conquer Earth, why didn’t they try?”

“They’ve never stopped trying. The atmosphere that surrounds the Earth, hardly paralleled in density anywhere in the solar system, created such friction that the Martian vessels were burned. Martian vessels have reached the Earth, but only as cinders.”

Brewster said: “It didn’t burn our ship.”

The Estannar made his gesture again, turning his palms outward and closing his fists. “I must ask you again to trust me. I can tell you everything, but not now. There is no time, believe me.”

Brewster’s eyes were clouded as he stared at the Estannar. “We don’t know anything,” he said. “We don’t begin to understand you, let alone trust you. All we know is we’re in the middle of something that’s so big it...it...” Brewster said: “We’ve no reason to trust you.”

Dramon held his fists closed so tightly that white spots appeared over his knuckles. “The Martians were waiting for a ship like yours,” he said. “Our sciences never mastered metals. We created what your Dr. Stevens called a plastic civilization. Our plastics burned where your metals didn’t. That is why we destroyed your ship—to make certain that it did not fall into the hands of the Martians.”

The Estannar held up a restraining hand as Brewster said something about Stevens. Brewster flushed and went on speaking, but Dramon turned from him to the others, and instead of raising his voice as Brewster had done, he spoke more quietly.

“I cannot hope for your understanding,” he said. “The Martians are beyond your understanding. The universe they rule is an empire built on hatred and violence. Its teeming billions of people are the slaves of Mars in one form or another, and all, to varying degrees, pay it tribute. Mars is a world of unreason, with a morality of its own, a morality so repugnant to the rest of the universe that it has fought the Martians for centuries.

“You are now part of that fight. You belong among us. But whether or not you want to help us—for potentially you are the greatest of our allies—returning to your own world is now impossible. Therefore, I must again ask you: will you come with me?”

The Estannar stepped back and regarded the men, and then, as he saw their eyes turn to Nick Brewster, he waited for Brewster to speak.

A CHANGE had come over Brewster. Listening to the Estannar, a host of conflicting thoughts and emotions had raced through him. His deep-set eyes glinted greyly as he asked, “Would you say that the things you’ve
told us are facts—or opinions?”

"Facts."

"No one would disagree with you?" Brewster persisted, quietly. "There aren’t races... individuals, people, say, who see these things a little differently?"

"What are you trying to say?"

Brewster stroked his chin reflectively. "I’m saying it," he said. "I don’t see why we must assume you’re telling the truth."

Somberly, Dramon said: "It is a tragic fact that since I am of Estannar, I always speak the truth. I cannot lie."

Nick Brewster smiled. "I won’t pretend to understand that. I do know, however, that every fight has two sides. At least two. It might just happen that we had fallen on one side, when we might have chosen the other, given our choice."

The little white men who were standing behind Dramon came in closer. Softly, the Estannar said, "You might choose... conquest... murder... slavery... injustice?"

"It depends," said Brewster. "It depends on your point of view." He faced his companions as he went on: "Not that we approve of murder, but murder, violence, injustice—even if they exist—are just words, opinions. The Indians of our west burned people alive, and from their point of view they were right because they were defending themselves. The pioneers conquered them, and from their point of view they were right because they needed land where they could live. If you, as an Estannar, landed in the Indian country a hundred years ago, the Indians would have told you that the pioneers were conquerors and murderers, but it would be only a partial truth. Maybe, if you’d had a choice, you’d have chosen the pioneers. Maybe they’d turn out to be more our kind."

The Estannar said, "You speak more to your friends than to me, but I do not see how you can think the Martians might be more your—"

Brewster interrupted. "Do we have a choice?"

"Earthmen!" said Dramon. "Speak for yourselves! Brewster will not believe me, but what do you say, Drake? And you, Purdom?" He had remembered the names perfectly. "What have you to say, Abbott?"

Joe Abbott said: "I believe you, if only because you saved our lives."

"Did he?" Brewster snapped. "We were stopped from crashing by a machine, but the Martians had that machine!"

"What you say is true," the Estannar admitted, as the men waited. "The Martians had the machine, but it was stolen from us. We Estannars, Venusians, invented the machine long ago, anticipating—"

"Not interested!" said Brewster. "We don’t know whose the machine was. We know the Martians used it. If we’re to be thankful for being alive, we’ll thank them!"

"It seems to me, Mr. Brewster—" Glenn Purdom began.

"Shut up!" said Brewster.

Dramon said: "But their purpose in saving you was only to—"

Brewster demanded: "Do you have a choice?"

The Venusian let his hands fall limply to his sides. "No," he said, very quietly. "There never has any question of a choice. You forget that more than your desires are involved." He flung his cloak over his shoulders and spoke a few words in a strange tongue to the little men around him. They cried out his orders, and the cavern echoed with their voices. "You will do
as I say,” said the Venusian to the Earthmen. “If you disobey, we will be forced to kill you.”

“That,” Brewster sneered, “is tyranny enforced by murder.”

Dramon nodded. “If you prefer.”

The little men had come pouring down from the overhanging tiers. They formed triple lines along the cavern floor, each of them holding a cone in his hands. At a signal, they started walking quickly into one of the tunnels from which many of them had come. Torchbearers went in with them at regular intervals, as the immense cavern emptied its lights into the tunnel, it grew more shadowy and dimensionless.

When half the little men had gone in, Dramon told the Earthmen to follow. All eight men preceded him, and behind Dramon came the rest of the little men.

The tunnel roof was low enough to force all the Earthmen except Rogofsky to stoop. There was no sound now save the patter of hundreds of feet in soft, powdery soil. The dust rose in a thick pall through which the torches burned feebly. The men coughed as they trudged on, holding bits of rags to their mouths, feeling along the devious turnings of the tunnel. The coughing grew more painful, the dust thicker, like a hot, dry mist.

Once, when the torches ahead disappeared around an abrupt turn, and those behind had not come up quickly enough to break the sudden descent of darkness, Brewster was startled by something that glowed weirdly, swinging near him. It turned out to be the luminous dial of Abbott’s watch. The hands said 5:40. Wildly, Brewster thought: Six hours ago I was home....

The tunnel straightened and inclined down for a short distance, and Brewster peered ahead and saw the ghostly rows of figures swathed in cloaks, moving forward silently like bleached shadows in a white fog. Though full realization of what had happened to him and his men had not yet come, nor would it for some time, strangely, it seemed to Nick Brewster that of all the things that were going on in his mind, the memory of home was the most unreal....

An hour later the column stopped.

Dramon went ahead, returning in ten minutes to ask the Earthmen to follow him forward again. When the group reached the head of the column, they were once more in a cavern. This cavern was very long and narrow, crossing the tunnel at a right angle, like the cross-bar of a capital T.

Four other Venusians were there, standing around a jutting stone on which lay a mass of tunics made of the shining armor which Dramon alone of these five wore. When the Earthmen came into the cavern, the Venusians started to give each of them one of the tunics. Dramon stopped them, speaking to them in a foreign tongue.

Dramon said: “Come with me.” The Earthmen followed him into the cross-bar for a few hundred feet, swallowed up in darkness. They heard Dramon scratching and digging, then something heavy rolled away from the wall of the cross-bar.

They were looking out on a vast plain. It was nightbound, but its face was clearly illumined by what seemed to be great black pots of fire. The fire was unlike any the Earthmen had ever seen. The tongues of flame spread out evenly in all directions, forming a blazing rosette, and what little movement there was in each of these many petals of fire was slow and almost purposeful. The light that came from these pots of fire was white, faintly tinged with am-
ber, and this light too was evenly spread over the plain.

Two hundred yards away, one-third hidden in a pit, though they saw all of it because they were looking down, was a spear-shaped ship. It was like a queer, bright orange fish, with huge, sloping fins, and tiny lighted windows in its head like many sightless eyes. It was about four hundred feet long.

Beyond the ship were other ships, none of them very near. They were of varying shapes and colors and most of them were larger than the orange ves-
The little valley was a hell of flaming green rays and battling men. Then in a rush of blinding illumination a space ship leaped toward the sky.

In the center of the plain were several low buildings. Most of them were circular and lights blazed in them. People were moving about on the plain, but there were not more than ten near the orange ship. These were all men dressed in black.

From behind the orange ship, a bowl-shaped vehicle rolled away. Far over to the left, a small vessel shot into the sky. It left a trail of glowing cinders behind it. When its roar and sibilant hissing died away it was quiet again.

Dramon pushed the stone back in
place and shut off the view. The Earthmen had heard footsteps passing them in the cross-bar all this time. One or two torches along the shallow length of the cavern revealed that the little white men had all taken positions parallel to the Earthmen.

"That ship you saw not far away," said Dramon, "was waiting to take you to Mars. The Martians are confused by what has happened. Most of the armed strength of their colonial regiments are scouring the lighted portions of Boron, your moon. At a given signal we will all come out of the mountain and seize that ship. It is a warship, faster than most, and with a good start, it may outdistance all pursuit, or, if overtaken, it will have a good chance of fighting its way out."

"Where do you intend taking us?" Brewster asked.

"I don't know," said Dramon. "My orders will come later."

Brewster asked: "What happens if the attack fails?"

The other Venussians arrived, carrying the armor tunics. There was a hurried consultation between them and Dramon, and when it was over one of them took all the armor and went back with it. The other three stayed.

Dramon then answered Brewster. "If we fail, death is the best alternative. The worst is capture by the Martians. Remember the bodies of the men from the first ship."

He looked up at Brewster in the gloom. "What you are thinking is correct," he said. "I decided against giving you the armor. Since you will have no part in the fighting, you will be in no danger if we succeed. If we failed, it would only aid in your capture."

Brewster said: "You mean the Martians want us alive, but if you fail it'll be easier for you to kill us this way."

"If you prefer," said Dramon.

He said something to one of the little men, and his words were passed along. In a moment, down the length of the cross-bar at intervals of a few feet, the little men pulled away stones that blocked the cavern off from the plain below the mountain slope.

"Stay here until you are told to leave," said Dramon.

He raised an arm quickly and brought it down. A moment later he jumped out of the cavern and started running down the mountainside, and behind him came a wave of the white men, the Borons. Another long row of Borons swept out of the shallow cavern, then a third, a fourth.

The first row was almost halfway down before the group of black-clad Martians saw them coming. They hardly had a chance to do more than that. They dropped to their knees, and scores of thin green lances were already piercing them. One by one they flopped over.

Suddenly the pots of fire nearest the orange ship flared up in streamers of flame. In an instant it had spread over the field. The petals seemed to join hands and form single, immense pyramids of fire that lighted the field with the brilliance of sunlight. From far off a series of chiming, high-pitched notes sounded. And now the pots of fire died down to a dull, eerie glow that seemed darker than night, with one fantastic difference—the Borons were clearly visible in that glow, though nothing else was!

Martians had long since come pouring out of surrounding vessels, meeting the attack. Now they were lost in the darkness. Lines of Borons, gleaming with phosphorescence wherever their skin showed, swept past the place where the orange ship had been, carrying the battle ever deeper into the plain. The
Borons covered themselves with their white cloaks, and as long as they remained under them, were as invisible as the Martians. From their weapons came streams of green fire that covered the plain with planned, intricate patterns as delicate as spider-webs.

WHERE the green burst against a ship, it spluttered up momentarily in showers of sparks. Where green answered green, other streams of fire, suddenly coming into existence under the level of the patterns, put an end to those answers.

All at once there were lines of liquid fire pouring down from twenty feet above the plain. Again and again a score of green streaks would stab all around it, until the overhead attack would stop, but only from that one spot. The Martians, with strength accustomed to much greater gravities, were leaping high into the air! Their targets were frequently visible, and several Martians had leaped past the fourth line of Borons, to attack them from the rear, from everywhere at once.

The field was a silent chaos of motion, motion that was described only in terms of light. Little by little the Borons edged deeper, cutting a clear path of destruction behind which there was calm and solid darkness. Little by little the green fires died away. Suddenly lights streamed out of the portholes of the orange ship.

"Now!" cried one of the Venusians to the Earthmen. "Run for the ship!"

As the Venusian stooped to go through the hole, Nick Brewster seized him by the neck, swiftly raised him overhead and hurled him at the two remaining Venusians. Instantly, almost before they had hit the opposite wall of the cavern, he smashed into them, his fists flailing like pistons. It was over in seconds. Brewster felt in the darkness for the cone-shaped rods each had carried. He found them and got up.

The other men had sensed and felt, rather than seen, what he had done. Abbott cried out some incoherent query. The sound of the brief scuffle and Abbott's voice brought approaching footsteps.

"Duck outside!" Brewster whispered fiercely. He grabbed at the men nearest him and shoved them through the holes. He jumped out after them and waited for the others. He couldn't be sure that they were all there, so he whispered, "Up the mountain. Hold hands and jump." He clutched hands on either side of him, then leaped up as high as he could. He landed sooner than he expected; the slope was very steep at that point, and as the men crashed into it, their line broke. They felt for each other again and jumped once more, unevenly this time.

A pencil of green fire careened over their heads, seeking them out. The men scrambled for shelter, lying flat against the slope. The green came closer. The sound of their breathing was giving them away. Brewster fumbled with the green cones, but nothing happened. A beam of fire bit off pieces of rock near him. A second beam joined it.

BREWSTER crawled away a few feet and got to his knees. He took a deep breath, tensed his muscles as he crouched, and let go. His leap carried him at least fifty feet down the mountainside, behind the origin of the green streaks, and slightly to one side. He edged in closer and judged the distance. Then he threw himself up and forward. He came down on two forms standing close together. His knees hit one in the back, and as he toppled forward, he spread his arms and encircled the other. A violent stab of pain hit his forearm and crept to his shoulder.
and he rolled over on one side and kicked with his feet. He got up too quickly and overshot his mark and the green flame brushed his throat. Then he jumped almost straight up, and when he landed, immediately dove forward. One of his hands thudded sickeningly against flesh that broke under the force of his blow and fell away.

He lay very still, trying not to breath, waiting. Something scraped less than five feet away, downhill. He rolled over suddenly, and when he got up, he was holding a squirming body high in the air. He swept his arms down and smashed the body in his grip against the rocks. When he opened his hands, the body rolled down the slope.

He stood up, sick with pain. Nausea rolled through his body and he vomited. He felt numbness coming over him, and he staggered as he started back up the slope. "Joe," he called out, weakly. "Joe." He sank down on one knee, then fell. Moments later, he hardly realized that Abbott had found him.

It seemed to him that the world was on fire. Something crashed and roared in his ears. He had no way of knowing that the orange ship had blasted off. The pots of fire had blazed up again, and their light had revealed scores of bowl-shaped vehicles on the plain. From these rolling monsters, which had come up under cover of darkness, jets of green flame spatured. The Borons, helpless now, scattered, falling by tens under the raking fire from the vehicles.

Abbott stared down into the brilliant light of the plain, watching the carnage slowly come to an end. In his arms he held Brewster's head. There was a bewildered light in his eyes as he looked over the field and heard Nick Brewster mutter, with his last conscious breath, "The Martians...will... save... us..."

Brewster's body jerked convulsively and he was still.

TWO sounds marred a depthless quiet. One was a constant, low-pitched humming that was barely audible. The other was sporadic, a hissing noise which lasted for a few seconds at a time. The second sound was made by little bursts of air that came from a tube placed in the center of the fluted ceiling. Nick Brewster had figured it out after staring at it a while, feeling the air around him freshen after the hissing noise.

He rolled over on his side, just a little. A stout, though somewhat flexible, belt pinned him down. Across the small cubicile, one atop the other in a sort of double-decker bunk, lay Paul Stewart and Bucky Callahan. Brewster wondered whether they were dead or asleep. He monkeyed with his belt until he pressed a button that opened it, then he swung his legs over the side of his cot and sat up, his legs dangling some four feet from the floor. He peered down and saw little Rogofsky lying in the cot underneath.

After he eased himself to the floor he tried shaking each of the three men, but nothing happened. Nevertheless, they were alive; he felt their breath against his hands, testing them... then he saw his right arm. The leathern sleeve had been cut open and there was a long, pink scar from wrist to elbow. He touched his throat and felt a chunk of knotted flesh. He remembered a little, then gave it up.

He looked over the small, windowless chamber. It, and the furniture, was made of a smooth substance that felt like the ladder the Borons had used. A plastic? Then so was the belt, though it was pliable. The bedding felt like wool, but it was as spongy as rubber. There was a crack along one of the two
free walls. When he touched it, it parted and the two sections slid out of sight, forming a door that gave on a narrow passageway.

Brewster walked down the passageway, turned with it, and came to a dead end. Suddenly the small section of the floor on which he was standing began to descend. It went down for about ten feet and fitted into the floor of a large room. It was severely furnished with a few chairs and tables. Along the opposite wall was a series of cots, in each of which lay sleeping Martians.

Brewster spent a long minute looking at the Martians before he resumed his wandering. Individuals though they were, they shared in common their slender, long faces, skin that was a deep, coppery hue . . . and something more . . . something unrelaxed about them, though they slept.

The adjoining chamber was divided by a raised platform in its center. The ceiling was a maze of wheels and dials, and the walls were covered with colored panels, each of which bore a different symbol. Four Martians slept in cots below the platform. At the far wall was an open door. Brewster went through it and found himself in a slightly curving passageway again. It was lined with windows.

At first he saw nothing when he looked through. Then the blackness became pierced with points of light. He walked along the passageway from window to window, noticing the different colors of the lights. When he was near the last window, he saw a circle of light, like a diffused corona around a smaller circle of darkness. Beyond it he saw a much larger greenish sphere—then suddenly, for an instant—a relief map of mountains and plains.

Now he knew where he was. He was in a Martian spaceship. The corona was sunlight, glancing off the Moon; the green ball was Earth. The Martians had come around to the dark side of the Moon.

He went to the end of the corridor and was in another chamber of sleeping Martians. He retraced his steps along the windows, sensing he was going to the bow. He climbed up three stairs, pressed against a door and was in an oval room. There, strapped in a reclining chair, silhouetted against an orange, transparent wall, was a Martian. Brewster walked up to him and saw that on the other side of the chair was an inclined panel of tiny dials and buttons. Through the transparent wall he saw the planets, gleaming like jewels.

As Brewster stood there, the Martian’s eyes opened. After a moment, the Martian sighed and said: “Have you been awake long?”

Brewster said: “About ten minutes, if you understand that.” The Martian let breath out slowly and nodded. “I’ve been wandering around the ship,” Brewster added. “Everyone’s asleep.”

“Not asleep,” said the Martian. It seemed difficult for him to speak, and he inhaled several long breaths before he said, “They took a drug to avoid the effects of the first few minutes after a take-off. I use less because I am in command of the ship, but the others should soon be awake.” He motioned and said, “I should like to talk to you. Sit down, if you will.”

“Where?” said Brewster, but as he turned around, he saw that a chair had come up from the deck. He sank into its softness, watching the deck open again as a low table rose up.

Brewster gasped in bewilderment. He looked from what was on the table to the Martian and saw the thinly veiled amusement in the Martian’s grey eyes. Brewster said something inaudible and
began to open the carton. For on the table was the huge carton that had been the last thing Nick Brewster had taken from the *Trailblazer III*. His hands were trembling. He took out several long envelopes, dug in past the phonograph and the pile of records and other wrapped parcels and brought out one of several dozen cartons of cigarettes.

The Martian smiled as Brewster fumbled in his leather coat for a pack of matches. Brewster struck a light and took a long drag. The Martian's smile deepened as the first grateful plume of smoke blew out.

Brewster said quietly: "You don't know what this means to me."

"But I do," said the Martian. "We were very careful to bring it along after the Borons abandoned it." He let Brewster smoke a while before he resumed what he had been saying. "We didn't drug you because you remained unconscious after our surgeons operated on you."

Brewster touched his throat and said nothing.

"I wasn't sure."
"You couldn't be sure. But what if you guessed wrong?"
"Did I?"

The Martian's keen eyes flickered.
"How strange and varied you Earthmen are," he mused aloud. "We can stand on the plains of Boron and see your world plainly, with the naked eye. If we use our powerful telescopes, we can look down into individual streets of your cities, see your gardens, animals, rivers. We know so much of the externals of your world, and so little of its people... ."

He murmured: "What if I were to tell you that the Venusians cannot lie? Cannot—if you understand that."

"I don't," Brewster said. "One of them told me the same thing."

"It was true. It is the outstanding characteristic of the Venusian race. An organic impossibility... ." he shrugged contemptuously, "...like an animal that must run toward light... . a seed that must grow in soil. The one vital flaw in the destiny of Estannar—of Venus. They cannot lie!"

Nick Brewster shifted uneasily in his chair and regarded the impassive Martian. He started to say something and stopped as another Martian appeared in the passage leading to the bow. The two Martians exchanged a few words and the second withdrew.

"How fortunate we are," the Martian said, as an aside, adding, "Will you look in your coat pockets, please?"

Brewster felt the pockets of his leather coat, and from one of the inner ones he withdrew a strange, soft sheet of folded paper. He unfolded it and read a dark-inked, neat handwriting.

*To Whom This Message Is Delivered:*

*You have fallen into the hands of*
madmen. No matter what you see, no matter what you are told, believe only the words of this message, for they may be the last I will ever write. Torture, unbelievable suffering and eventual death wait for you, and from these there is no escape unless the Venussians can help you. If they fail you must destroy yourselves. I have no way of knowing how many years separate us, but if you are a human being, believe these words or live to curse the doubt that prevented you.

Dr. John Stevens, Commander of the Trailblazer I.

"A forgery," said the Martian.

Brewster passed the paper to him. "I know the handwriting," he said, with no particular expression.

The Martian read the paper, and when he had finished, he held it in one hand and struck it gently against the open palm of the other.

"Rather florid," he remarked, coolly. "As a matter of fact, your Dr. Stevens has been in such poor mental health since he survived the wreck of his ship that he could not possibly have written this. Were you friends?"

"I paid for his ship."

"Interesting," the Martian commented, thoughtfully. "I plan to prove that this is a forgery at dinner. It will be a fascinating diversion for you, observing how the Venussians use their extraordinary intelligence in wild, futile attempts to smash our empire. Dramatic as it is, this adventure is less remarkable than many—"

HE BROKE off for some reason, and looking into Brewster's eyes, he allowed himself to smile. "You know," he said, "we Martians fancy ourselves as somewhat clairvoyant. We like to think that we are the forerunners of a telepathic race. But you are an uncommonly enigmatic subject. Tell me, do I bore you with this... this...?"

"This information on the Venussians?" Brewster finished, dryly.

"Ah, but now you have quite given yourself away," the Martian reproved him, toying with the paper. "Well then, I was describing the Venussian resourcefulness. They knew as well as we did that someday another ship would come from your world, and they prepared a surprise for us. Realizing that you were our chance to unite our civilizations, the real surprise is the fact that they did not kill you immediately. Certainly their hatred and envy are equal to it. Some plan, which as yet has escaped our vigilance..."

"We still do not know," he resumed, after a reflective pause, "how they managed to smuggle themselves to Boron. Without Venussians to guide them, the Borons would be helpless; they have the minds of children. With direction and weapons, they are magnificent fighters. And though there aren't many of them left—we spread a disease among their females—they have made our colonial outposts on Boron pestilential and dangerous, because of the Venussians.

"The Venussians," he repeated slowly, grimly, "and their truths."

He unfolded the paper, and in a lighter tone that pretended not to realize the significance of his words, he reminded himself casually: "Oh, yes, I meant to explain that. Naturally, I meant they always told the truth as they see it. That isn't always the same thing as being unable to lie, is it?"

And now that he had completed the conversational circle, he studied Brewster watchfully, noting Brewster's rigidity relax the least bit, almost measuring the hardly audible sigh that escaped him.
Brewster said evenly: “I’ll take your word for it. I’ll take your word for anything you say because I’ve a lot to learn. But if you want to tell me—tell me. Don’t play cat and mouse with me.”

“Catandmouse?”

“It means I don’t like being played with.”

The Martian nodded. “We all have a lot to learn. For example, the Vensians made a fatal error in assuming they could force you to their will.” Slowly, he began to smile again, until his manner was warm and friendly, more so than it had previously approached being. “I like you,” he said.

He rose from his chair. “And now,” he said, returning the sheet of folded paper to Brewster, “I have my work to do, and you, doubtless, are anxious to see your friends again.”

Brewster started, and a quick flush spread over his face. He rose beside the Martian. They were almost the same height.

“You’d quite forgotten to ask about them,” the Martian said, with an odd twist to his smile. “The other four were put in a room similar to yours. Any member of the crew will direct you—most of them at least understand your language.”

BREWSTER picked up the carton, caught the questioning look on the Martian’s face, put the carton down again and began to empty it. “Do you want me to explain these things?” he asked. “There’s nothing in here except some pictures, a machine for playing music, cigarettes, and these.”

He lifted out two heavy, blue-glimmering automatic pistols.

“Metal. And very handsome,” the Martian murmured, appreciatively. “Do you have much ammunition?”

“About five hundred rounds.”

“Bullets, that is? Ah, well, when we have more time to continue our discussion, I’ll show you some of our weapons. You should enjoy them. Until dinner, then, Nick.” He held out a firm hand which Brewster took. “Your friends told me your name. I am Captain Akar.”

Brewster grinned and observed: “It sounds like a laxative.”

He put the guns back and took the carton with him as he left. Retracing his steps, he found activity everywhere; Martians attending the gigantic, complex instruments, repairing, adjusting. Brewster lingered long enough to satisfy himself that he had the freedom of the ship before asking for his companions. When he was directed, without even an escort offered, he felt happier than he had been for... but when he suddenly looked at his watch, it had stopped.

The men were on the upper deck, in a semi-circular observation room, fronted by a concave, transparent wall that revealed the starry void through which the ship silently forged.

When Brewster entered, the talking he had heard stopped so abruptly that first Callahan, then Drake, tried to pretend that nothing untoward had happened. Brewster let the carton down and looked at the men, and though he had not the least idea of what might have been going on among them, one thing he knew as a certainty—it was not his sudden appearance, in itself, that had stopped the talking. He sensed the hostility that lay in the room. The sense of freedom, almost of well-being, and of looking forward to the unfolding of events greater than he could yet realize, disappeared.

He said: “You can tell it straight to me.”

Joe Abbott walked toward him. “You’re right, Nick,” he said. “Anything we’ve got to say we’ll say in front
of you.” He faced the men a moment before continuing. “It’s this,” he said. He opened his palm and revealed a sheet of folded paper.

BREWSTER knew what it was before he opened it. It was a duplicate of the warning signed by Dr. Stevens. He looked at it without reading it and gave it back to Abbott.

“Stewart found it in his coat,” said Abbott.

“In his coat,” Brewster repeated. “But there seems to have been a question as to whether you were going to tell me about it.”

As Abbott hesitated, Glenn Purdom stood up and said: “You’re right, Brewster.” It was the first time any of the subordinate crew had refused him the formal Mister. “All we know is that something too much for us to understand all at once... anyway, you’ve taken things in your own hands, and you haven’t seen the things we’ve seen—”

“What things?”

Abbott answered: “You were unconscious. We were on the Moon for more than twenty hours after the Martians got us. We’ve seen enough of their slave system and their senseless murdering—”

“They’ve treated you all right, haven’t they?”

“So far. But what if the Venusians were right?”

“They lied!” Brewster snapped.

Peters spoke up. “We’ll make up our own minds.”

Peters took a step forward and Brewster said: “I’ll break you in half if you come any closer.”

“Stay where you are, Matt,” Abbott said.

Brewster took out the warning he had found in his own pocket, and together with the copy Abbott had given him, handed both to Abbott.

“What does this do to your pet theories?” he sneered. “Here’s a copy of that paper that the Martians gave me!”

Conscious of the impact of his words, he stood there, savoring the effect as he watched the men. Then, as each came forward to look for himself, he disregarded them, busying himself instead with the carton, from which he broke out a pack of the precious cigarettes. He threw the pack to Drake.

“From our enemies,” Brewster said.

Nick Brewster felt he had won a complete victory. The gratitude with which the cigarettes were taken was subordinate only to the shock of his revelation. It seemed to him that the tension vanished with the clouds of smoke. How sweet the tobacco smelled!

Abbott smiled wanly, quoting: “Beware of a Greek bearing gifts.”

“What about looking a gift horse in the mouth?” Brewster grinned.

“All right then. Did you find out where we’re being taken?”

The question jarred Brewster. “It was a short conversation,” he said. “We didn’t get to it.”

“Strange,” Abbott mused. “It was the first thing you asked the Venusian. You insisted on it.”

THE thoughts raced swiftly through Brewster’s mind. Yes, it was strange. He had forgotten all about it... as he had not long before forgotten to ask about his friends... his crew, at any rate. Why? Was it because he felt a more trusting instinct for the Martians? There was no reason for it. But so too, there was no answer. “I’ll tell you this,” Brewster said.
"When I do ask I'll get a straight answer—not an 'I don't know.'"

"But the Venusian didn't know!" Abbott exclaimed, and tried to check the exclamation too late.

"Really..." Brewster breathed, somehow aware that he was stumbling into something important, something concealed, and in which every other man in the room shared. "And what makes you so sure, Joe?"

Tight-lipped, Abbott said: "Nothing. I just felt it."

Now Brewster knew that the hostility he had felt when he had first entered the room had never disappeared. He was baffled by the reason for it, enraged as much as mystified. But he had to go easily, to find out what was up without destroying his chances entirely. He took the pack of cigarettes from Drake and lit one, offering another to Abbott, who had not yet taken any.

Abbott shook his head. "No thanks, Nick. I don't want to offend you, but I couldn't smoke one of these without remembering that you chose to take them when instead you might have saved one of the four men left behind in the ship."

Nick Brewster stared into Abbott's eyes. His mouth opened the least bit and he licked his lips as if from a bitter taste. Then, with the hand that held the freshly lighted cigarette, he slapped Abbott viciously across the face. The cigarette flew out in a shower of tiny sparks, leaving a dark smudge over a reddening welt on Abbott's cheek.

Abbott had fallen back a step. He made no move. The other men came up and gathered around him. Brewster picked up the carton and left the room in a deathly silence.

The silence had persisted until now. Brewster glanced at Captain Akar, noticing how the Martian's unstudied gaze swept the length of the table, at the head of which he sat. The eight Earthmen who were his guests at dinner sat four on either side of him, having seated themselves in such order that Nick Brewster had been left the chair to the Captain's right, seemingly by chance. Below them sat three Martian officers, their rank indicated by the number of black velvet bands on their sleeves, of which Akar wore three.

Brewster knew that the Captain was aware of something irregular. There was little or no conversation. Though the food was strange and excellent, and this was the second meal for the Earthmen in many hours, there was no enthusiasm. The Captain and his junior officers had made efforts to get the men to talk. The Earthmen asked about a fruit or drink, but never touched any of the countless things the Martians might reasonably have expected them to ask about.

But Akar's eyes were too casual, Brewster decided. Probably he knew or had guessed that there had been a falling out. What he was now trying to fathom was the reason for it, and in this he knew no more than Brewster, because, Brewster realized, the wall between the crew and him was there long before he had struck Abbott. The note that Akar had called a forgery was part of it, and Akar had said he would prove his charge at dinner.

The dessert was the most elaborate of all the dishes. It was a huge pastry made of iced fruit that tasted like pineapple. Brewster reflected on the unusually rich food that these stern, stoical militarists ate, and yet the dining hall itself seemed to prepare one for luxury. Of all the ship, this chamber alone was obviously fitted with an eye for comfort; the walls hung with tapestries, the chairs deep and reclining, the lighting soft, the floors smoothly car-
peted. It was a contradiction that Brewster was to ponder many times before he came to understand it.

"And now, gentlemen," said Captain Akar, "we have prepared a diversion for you." He said something to one of his officers, who left the room, and added, "I hope it will cement our friendship."

When the officer returned, several members of the Martian crew followed, carrying a heavy chair. It was an odd chair. Each of the arms terminated in a red, translucent ball, and this same gleaming substance formed a hollow headrest on the chair's back. When it was placed on the floor not far from where Akar sat, a small machine was attached to it. One of the Martians tested the machine by throwing in a switch. Its effect was to bring the red substance to startling, gleaming, sparkling life. It shone brilliantly, and crackling noises issued from the little sparks that flew from it.

The demonstration ended, the machine was turned off. Captain Akar rose from the table, and standing beside the chair, began to speak to the Earthmen. "Gentlemen," he said, "because of an organic deficiency—or construction, if you will—the Venusians are the only race in the universe that are unable to speak a falsehood. They cannot lie."

THOUGH his opening sentence was a bombshell, Akar continued without pause, speaking directly and simply, telling them what he had told Brewster some two hours before, including his accusations against the Venusians and their work among the Borons. And though he made no apparent effort to convince the Earthmen that he was telling the truth, and his sole intent seemed to be the bare transmission of information, Brewster knew that his words were more effective than the Martian knew. For all the Earthmen, Brewster realized, thought back to that moment when Dramon, the Venusian, had sadly said: "It is a tragic fact that since I am of Estannar, I always speak the truth. I cannot lie." And here, from the lips of a Martian, was corroboration!

"I intend now to show you," Akar concluded, "that even truth can have several sides, that what is true for a Venusian is not necessarily a truth for all." His face was expressionless.

He pointed to Joe Abbott. "Will you please sit down in this chair, Mr. Abbott?" he requested.

After a moment's hesitation, Abbott got up from the table and crossed over to the chair. The Captain placed Abbott's hands so that his fists closed around the balls on the chair arms, and he adjusted the headrest to suit Abbott's height.

"I'm going to ask you a question, Mr. Abbott," said Akar, quietly. "An unimportant question. I want you to resolve not to make any reply to it."

Abbott said: "I'm to try to say nothing at all?"

"Precisely. Now, Mr. Abbott, how did you like your dinner?"

As Akar spoke, he pressed in the switch. Abbott cried out and leaped out of the chair, and the next instant smiled in chagrin as he rubbed his palms together.

"You found it painful?" the Captain asked, surprised.

"What do you think of Martian cooking?" said Akar.

Abbott's fists grew white. His clenched hands trembled and his tight lips parted.

"Wonderful!" he blurted. "It's the best..."
And he stopped speaking the instant Captain Akar released the switch!

“You found it impossible to keep from speaking, did you not, Mr. Abbott?” Abbott nodded. “Well,” said Akar, with a slight smile, “I am most pleased to learn that you like our food, but I would like to demonstrate that all this clever chair does is to force you to speak, not necessarily to speak the truth. You were caught off guard that time, Mr. Abbott, but now let us try again. And this time, resolve not only to remain silent, but to lie when you answer me.

“Mr. Abbott, how old are you?”

The Captain threw the switch in again. After a short struggle, Abbott answered, “A hundred and forty-two.”

“And your sex, Mr. Abbott?”

“Female, damn it!”

The Captain released the switch again. “Well, gentlemen, unless we are to assume that Mr. Abbott is an old hag, I think we will agree that this amazing chair has no effect on what one says—but merely makes one speak.” He matched Abbott’s embarrassed smile as he asked, “Do you agree, Mr. Abbott?”

Again Abbott nodded. Then he said: “Would you mind turning it on without asking me anything at all?”

Akar again switched the chair on. After a moment’s silence, Joe Abbott unaccountably said, “This is a helluva'n idea. When I was a kid back in school we had a teacher named Miss Happy. I guess I just feel like babbling. Will you turn it off, please?”

“So you see,” said the Captain, “that it makes one speak, if only to talk nonsense. If you sat here long enough, you could talk yourself into exhaustion, and you could tell us anything, lies as well as facts.”

He waited for Abbott to get back to his seat at the table before adding, with soft emphasis: “But what if one couldn’t speak without speaking the truth?” His eyes searched the men’s faces. “This chair would then have a new function and value, would it not? It has that function and that value when we Martians deal with the sworn enemies of our civilization.”

At a motion from the Captain a door opened and a Venusian was led in. It was the same Venusian who had been in the cavern—the one who had taken the armor away!

Akar said: “This important capture, together with penetration of secret recesses in the mountain, we owe to Mr. Brewster’s aid.” The Venusian was seated in the chair, his hands strapped down to force him to hold the ruby balls, his shoulders pinioned until his head fitted into the headrest.

A dramatic hush came over everything. The Earthmen leaned forward in rigid interest. Two of the junior officers left the table and stood close to the chair.

“What is your name?” Akar said to the Venusian.

The Venusian stiffened and remained silent. He betrayed no fear, but rather a grim defiance in the face of inevitability.

Captain Akar threw in the switch. Slivers of sparkling crimson shone through the white of the Venusian’s shivering hands.

“What is your name?”

“Pollo.” The word was torn from him.

“When did you come to Boron?”

“Since four revolutions of Boron.”

“Your capacity?”

“Technical instructor in use of armor.”

“Your task?”

“To assist Dramon in the raid. To equip the Earthmen.”
"What preparations for the raid were you aware of?"
"That Borons, under our combat instructors—"
"How many combat instructors?" the Captain interrupted.
"I met three. I know of no others."
"Continue."
The Venusian continued exactly where he had been interrupted. "... had carried out systematic attacks on Lightside patrols and captured large numbers of weapons."
"Is that all?"
"Yes."

Akar's disappointment was brief. For the first time he faced the intent Earthmen. "You see," he said, "though there are a great many questions we should like to have answered, it is useless to ask. The Venusians, knowing that capture means that we have access to their secrets, protect themselves by limiting their knowledge. If ten men are to go on a mission, only one knows what the mission is, and even then only to a limited extent. Their plans are shared among many of them—"
"For instance," Joe Abbott broke in, "would you say that it was entirely possible that none of the Venusians knew where they were to take us after they had taken us off the—off Boron?"

Captain Akar smiled through a frown. "I see they could not satisfy your curiosity," he said, shrewdly. "Undoubtedly it was true. What they had arranged was a rendezvous at some specific point. Only one of them knew that point, and since this fool was an armor technician he wouldn't even know that point, though we shall examine him minutely later on. They can take advantage of any loophole in a question to evade it without actually lying."

Nick Brewster observed: "What happens if the one man who knows where to go happens to be killed or captured?"

The Martian shrugged. "Failure for all." He waved to the Venusian and said, as if it was self-evident, "Only demons would persist in the face of such tremendous difficulties. These Venusians are as tenacious as lice. I have caught Venusians who were at great meetings, only to find that everyone present was blindfolded, to avoid knowledge of their number or identities. For instance, observe how little this one knows."

Switching the machine on again, Akar said: "Do you know anything of the make-up of your new armor?"
"No."
"Where is the armor hidden?"
"I gave it to a friend."
"His name?"
"I don't know."

To the Earthmen, Akar observed, "And if he did know his name, and if we fortunately captured this friend, undoubtedly we should find that this second one had given it to a third, the third to a fourth, until finally it had been given to a Boron to hide."

He asked the Venusian: "How did you know exactly when the Earthmen were coming?"

Captain Akar shrugged and was about to continue questioning when the Venusian answered. "We posted watches on all your gravity cushions. We knew that you would arrest the fall of the next Earth ship, and that if you moved the gravity cushions, the Earthmen were coming."

"And to find out where they would land?"
"We detailed forces to cover all movements of the cushions."

The Captain nodded and showed slight satisfaction, observing, "This
is something our friend here should not have known, though it is common sense enough. Valueless as it is, it tells us something. It tells us that he overheard things he shouldn't have—a condition which was possible only through a relaxation of discipline and order. What is true for him must be true for others, and when our forces have brought in some of those others, they too will know things they shouldn't. Perhaps we may discover what new type of bomb destroyed your ship so effectively. Perhaps another may have a clue to the schedule they use for smuggling Venusians past our space patrols on Boron. . . ."

The Martian Captain paused, as if reflecting, and his flashing eyes swept the room. Brewster had seen him do this more than once, and each time he had felt a vague uneasiness, as if, he thought, he could fathom the same feeling in the Martian. He wondered why he assumed it at all. Certainly Akar was capable of hiding anything he wanted hidden. His face was an obedient, expressionless mask, altered only when it suited him. Why then did Brewster feel that he understood this being?

Now Akar said: "Has it occurred to you to wonder why this Venusian answered in your language, English? Why did he not speak in Martian, certainly a more natural language for him?"

"Why Martian?" Brewster asked. "Why not Venusian?"

"There have been no other languages but Martian since the spread of our civilization. Ours is the language of the universe."

"Then why did he speak English?" Brewster asked.

Akar said, quietly: "We are dealing with a highly intelligent being, remember; an individual whose brain is capable of many twistings and turnings. To understand his thought processes, let us make one assumption—that he had something to hide both from me and from you. By answering in English, he calculated to make me think that he had nothing to hide from me. As long as he is safe from me, he is safe from you, for only I know how to ferret out his secret."

Brewster shook his head. "I don't see it."

"I know you don't. Not yet. But let us go further. Assuming that he had something to hide from me and from you, he could now choose to answer either in Martian or in English."

"Now, the moment he came in here and saw that I was going to question him before you Earthmen, he guessed that I might have some suspicion, that I was going to try to make him admit something to you that he didn't want to admit. Knowing that, he could have played safe. By answering only in Martian, he could prevent me from getting his answers to you, because I would be forced to translate them. . . ."

"And if you translated?" Brewster asked.

"Would you believe me? Especially if I claimed to be translating an extremely damaging confession?" Akar let himself smile. "I wouldn't expect you to believe me. Neither would this Venusian. But the price of keeping his secret from you would be practical admission to me that he had something to hide. And since he wanted to keep this admission from me as well, he answered in English, hoping I would thus assume he had nothing to hide from any of us. Do you see it now?"

"Only partly," said Brewster, thoughtfully. "But suppose we don't assume that he had anything to hide? He might very well have answered in English even in that case. You haven't
proved he actually had anything to hide.”

Akar nodded somberly. “Nor could I by reasoning alone. I have tried to trace his thought processes to show you what we are dealing with. Because the fact is that he had something to hide, as I knew all along.”

Brewster asked: “And what is he hiding?”

“The fact that he knows the notes hidden in your clothes, supposedly written by Dr. Stevens—are forgeries!”

The effect of these words was tremendous. Even the Martian officers seemed to react. Brewster knew that the accusation itself had stunned the men, but he too felt surprised to learn that Akar had known of the other note and done nothing about it.

Presently, Joe Abbott said: “You haven’t proved it yet.”

Captain Akar turned to the Venusian, from whose face all blood seemed to have drained. The switch went in with a snap.

“Did Dr. John Stevens write those warning notes?”

The Venusian gasped. “No.”

“Did he know anything about them?”

“No.”

“Was he capable, as far as you know, of either writing or dictating them?”

“No.”

“Are the notes Venusian forgeries?”

“Yes.”

The Captain switched off the machine.

As quietly as before, the Captain said: “Shortly after we left Boron, a dispatch came to me with the information that a captive Venusian on Boron knew of certain warning notes intended for the Earthmen in the event that they were rescued by us.

“We had already rescued you. How could the notes now be delivered? Only by a Venusian. Where was there a Venusian close enough to you to hope to deliver such notes? There was a Venusian prisoner on this ship, being taken to Mars for expert questioning. And deliver the notes he did, though how is a small detail to be taken care of yet.

“But consider this important fact—this Venusian was captured by accident. Surely, therefore, he could not be the one originally intended to deliver the notes. The original bearer probably let himself be captured easily, hoping to get aboard this ship. When he didn’t he passed the notes on to this one here. That was a great mistake, though probably unavoidable. For while the original bearer probably knew nothing about the notes, this substitute knew too much. He knew enough of their origin to know they were forgeries! That knowledge couldn’t be hidden! And that was the knowledge he tried to hide from you; by first hiding it from me!”

Brewster scratched his chin. Somehow he was more troubled than before. The more he thought about it, the less it added up.

“Excuse me,” he said, getting up. “Suppose everything you say it true. Why shouldn’t he have spoken Martian just the same?”

Akar hesitated. “But I explained—”

“I know, I know,” Brewster interrupted. “If he spoke Martian he would give himself away to you. So what? All he cared about was getting the notes, and he had already seen to that. After that, for all you could do about it, he might as well have walked in here and told you he’d given us forged notes ... and you could never get him to disprove those notes as long as he continued to answer in Martian!”
THE edge of resentment, almost of arrogance, with which Captain Akar had met Brewster's objections, disappeared. He ran a slender finger along the line of his lips. Softly, his voice incisive, he said: "Then perhaps you can infer why he chose to answer in English?"

"I don't know," Brewster mused, "but your assumption that he was hiding something is a good one. He may be hiding something—something so important to him that he even took the chance of having to admit the forgeries in an effort to cover up this other thing."

"But what could be that important to him?"

Brewster said: "Ask him."

Thoughtfully, Captain Akar began to speak in Martian, when Brewster hurled himself across the room, his outstretched arms sweeping the Captain off his feet! Two thin lines of green fire hissed in midair over Brewster's head and started slashing down.

They never reached the floor. Lying on his back, Brewster fired his automatics from inside his pockets. Across the room, the two junior officers fell as if they had been smashed down by weight alone. The walls reverberated again and again as the pistols fired. When Brewster got to his feet, the third junior officer was still standing woodenly, his slender weapon halfway out of his tunic, his face blank, seemingly paralyzed by the explosions and their ghastly effect.

Captain Akar rose beside Nick Brewster. A quick glance told him that the Venusian too had escaped assassination. His voice was steady and completely controlled as he said to Brewster, pointing a finger at the third officer: "Kill him."

Brewster brought up one of the automatics and pressed the trigger. Thunde
on Boron, imprisoned there with several others. That was the secret he hoped to keep from me, hoping also that if it were attempted, that you might all be killed in the uprising.

"My junior officers, having questioned this Venusian while we were still on Boron, discovered that he knew of their plot. There was nothing they could do about it, for they were being held responsible for his safety. When they found the forged notes, hidden here—"

Captain Akar tore away the Venusian's tunic, baring his torso. He turned the stolid captive around and showed them his back. There was an imperceptible cut along the lateral surface of the skin. The Captain carefully took hold of the skin and pulled it. It came away—showing a little pocket that had been formed under the skin!

"When they found these notes, they told the Venusian they were going to deliver them for him. In that way, by binding themselves into a secret compact with him, they hoped to secure their own safety, for if he mentioned them at all, sooner or later he would have to tell about the notes he hoped to have delivered . . . !"

At length, Brewster sighed. "I see. They gave him a stake in keeping his mouth shut altogether. And when did they deliver the notes?"

"Sometime before the ship left Boron," Akar said. "They had ample opportunities then—and the note was already in your clothes when you woke up aboard ship before anyone."

In the silence that followed these words, the Venusian sagged forward against the bindings that held his arms. His head slumped against his chest, and his breathing came faintly. Without saying anything further, Captain Akar left the room. Soon, crew members came in, carried out the chair. . . .

"Later, sitting together in the observation room, after each of the men had spoken to Nick Brewster, Abbott sat with him before the huge transparent wall.

"You know, Nick," he said, "I don't have to tell you how sorry I am about this whole crazy mess. The others have told you what they think, but I feel worse than they do because it was my—"

"Forget it."

"It was lousy of me to make that crack about the cigarettes."

"Sure it was." He sat there, watching the plume of smoke rise from the tiny butt he nursed, wondering what unnatural luck had made him watch the Martian officers so carefully. And he had really been right with his guess about Akar's uneasiness. How strange it all was . . . "Nick."

Abbott broke in on his thoughts. Brewster met Abbott's eyes momentarily. "Nick, you're still not satisfied, are you?"

Brewster carefully ground out his butt. He played with the tinfoil from the empty pack. "Nope," he said, quietly. He stood against the concave surface of the great window and when Abbott got up beside him he whispered, "Be careful. We're being listened to."

"By the—no—you must mean . . . Captain Akar?"

Brewster nodded. "How else did he find out we'd quarreled?"

"But why should he spy on us?"

"He didn't explain that when he was being so honest with us."

"You don't trust him?"

Nick Brewster smiled. Through his teeth he said: "Stop being a kid. Did you see that Venusian—the way he never batted an eye when I fired those automatics? And the way he passed out at the end? Why? The Martians
had exhausted him before they brought him in. Why? Maybe they just wanted him to answer questions without getting off any speeches on his own hook. That chair forced him to talk, but maybe if he'd had some energy, he could have added interesting facts too."

"Do you think what he did say was the truth?"

"Sure. Only trouble was—the questions weren't the ones I would have asked. And that last conversation in Martian—what really went on between them? Not that I doubt the general story, but why did our host, the Captain, forget to mention the most important fact in that deal of the Venusian and his junior officers?"

"What fact?"

Nick Brewster smiled again. "You better stay close to papa," he said. "The Captain told us all about that deal, except why any officers should deliver notes like that. How could the Venusian know whether or not they would deliver the notes? Evidently the Venusian assumed they would. Why?"

Slowly, Abbott asked: "Do you know why?"

"No," Brewster sighed. "But so far it looks like even the Martians are divided. Remember what I said about falling on one side when we might choose the other? If the Martians are divided, how do we know if we want to be on Captain Akar's side?"

Joe Abbott turned and faced the men in the interior of the room. They had cut up sections of paper and made a crude deck of cards and they were playing for imaginary stakes.

Abbott said, in a subdued voice: "Then why did you kill those other Martians, if you weren't sure?"

There was an irritated edge in Brewster's voice as he answered: "I didn't know then what I know now, and I'd have done the same even if I knew. For my money, the Captain's still our man. But just in case I'm wrong... just in case, understand... knowing what I do, and being one step ahead of him... I can still change my mind."

And very softly indeed, he added: "As long as I have my wits. And my guns."

"And us?" said Abbott.

"Sure," said Brewster. "Smoke?"

CHAPTER IV

AKAR said: "The city's name is Ho-Tonda. It means Great Tonda, and since the word Ho is used only for those of the dynasty, in this sense it means also that it is the Emperor's City."

Nick Brewster nodded but made no attempt to keep the conversation going. In this last hour, as they had hovered at space-anchor over Mars, Captain Akar had more than once shown how pre-occupied he was. But he had invited Brewster to his quarters for the landing, and he kept speaking to Brewster, in the midst of his activities, for the sake of politeness.

The city was well named, Brewster thought. Even from their great height—the ship hung almost motionless miles above it—Ho-Tonda seemed vast and sprawling. It had been laid out in interlocking geometric patterns which constantly changed as one's point of view altered. At the center lay a huge hexagon, which Akar said was the walled inner city of the Ho-Ghan Lyrio, the Emperor. Ho-Tonda was a maze of colors, of gleaming towers and tinted ribbons of roads, but the inner city was predominantly crimson, with spires and steeples that glinted in the sun and gave the hexagon the effect of an enormous red diamond.

Akar had several times looked below through an instrument which Brewster guessed was a telescope. He had not offered it to Brewster. Something had
been bothering him from the time that three escorting warships had appeared, coming up suddenly to meet them. It had happened almost simultaneously with Brewster’s entrance to Akar’s quarters, and a few minutes after that the Captain had stopped his own ship. He had conferred with two of his officers and spoken heatedly—the first time Brewster had had an indication of Akar’s temper—over a small phone attached to the panel at his elbow.

After that he had continued to talk to Brewster, but his mind was elsewhere, and his growing anxiety ill-concealed; there was something in the way he watched the three wheeling warships, the way his eyes narrowed in silent judgment, that indicated a deep hostility. And Brewster had noticed that the hexagonal design emblazoned on the three warships’ hulls was a duplicate of the formation of the Inner City.

Suddenly one of the row of buttons on the panel began to flick on and off. Akar reached for the phone, listened briefly and quickly pressed down the flicking button. Across the room, a metal shield imbedded in the deck rose horizontally and tilted at an angle that faced Akar. Its underside held a round screen. A red light flashed across the screen once and then the screen remained blank another moment.

Slowly, the irregular form of a small stone appeared on the screen. It was an ordinary stone, pale-hued and lined with bluish veins. Suddenly, as if from within it, an amber flame burst out, devouring the stone, filling the screen until nothing else was left. When the stone had been burned away, the fire died and the screen was empty again.

Akar let his breath out in satisfaction. He returned the screen to its position in the deck and deliberately pressed several of the panel buttons. Immediately afterward, the ship shivered a little and Brewster felt the slight impact of the rockets starting again.

“We’re landing,” Akar smiled. He glanced out through the transparent bulkheads of his small oval room and saw the warships lying alongside and one leading the way.

“What was that I saw on the screen?” Brewster said.

Akar’s smile remained. “I continue to like your direct manner,” he said. He rose, adding, “There was some confusion about the escort. I had not expected it and would not land with direct orders. The orders came through, and what you saw was the sign of Jev Thyle, my lord.”

“Sort of a seal or coat-of-arms?”

“Exactly. The five Jeys each have their own, and they cannot be duplicated. The Jeys, you see, are the War Lords of Jegga and the commanders of the five armies. Together with the Regios, who are the civil governors, they are the administrators of the Empire. As a warrior, my allegiance belongs to Jev Thyle, Lord of the Flaming Stone.”

“And the Emperor?”

“Naturally. The Imperial hexagon is made up of the five-sided Empire and the Ho-Ghan, who represents the dynasty. Our allegiance to the Ho-Ghan is paramount.”

Both men stood in silence now as the ship descended, Akar again busy with his thoughts, Brewster subdued in contemplation. Ho-Tonda, as they drew closer to the ground, resembled nothing so much as a dream city, and whatever beauties it had displayed before were multiplied a hundred times by closer scrutiny. Its buildings, varied and arresting, were magnificent affairs of colored stone and glass, massive structures that lost no grace or delicacy. Though each building was in itself a
work of art, with pillars and abutments and arches and open walls of glass like lacework, the buildings formed larger groups of unified effect, and the colors spread to complex harmonies.

And on the roofs, and in the windows, and as the streets became evident, there too, tremendous crowds milled. The tiny dots of color that were their clothes were like innumerable bits of confetti, contributing to the holiday effect. The ships, on their way down, had not come near the inner city, but now, passing over what seemed to be the outskirts of Ho-Tonda, Brewster saw a huge canal. He might have thought it a great lake except for its perfectly straight shore; it was many miles across and stretched away to either side until it was lost in distance. Its water was tinted a pale red, and its surface was dotted with numerous craft that moved about with the erratic speed of waterbugs.

The ship's bow swung down sharply and went into a deep glide, and for a moment, flaring bow rockets cut off the view, but when they let up Brewster saw a great field under them. The field was ringed by small, conical green structures, and as the ship swept by them, they glowed vividly even in the full light of day. A group of small, extremely ornate buildings, like miniature cathedrals, stood in the center of the field. At several places near these buildings, groups of ships sat on the ground with their bows tilted upward. Like the escorting ships, all were crimson and marked with the Imperial hexagon; Akar's ship alone was orange-amber.

"We will be down in a moment," said Akar. "You will want to join your friends again." Brewster nodded and started to leave when Akar added, "We are being received by the Imperial Guard, the Argyres. It would please me greatly if you and your friends made no mention of what happened aboard my ship."

"Meaning what?"
"The Estannar and the—ah—slight case of mutiny."
"Mentioned it to whom?"
"To anyone."
"All right," said Brewster.
"You see," said Akar, "since the Argyres are taking you over, it may be a short while before we meet again. Until then, I should like to feel that our secret remained—"

"All right," said Brewster. "Anything you say."

CHAPTER V

THE Argyres were strange. Brewster first saw them through the transparent wall of the observation deck, when he rejoined his men. As the ship slowly settled down, the Argyres marched to the ship, forming a double-filed lane back to the buildings from which they had come. There were some five hundred of them. By comparison with Akar's crew, they were all exceptionally tall, at least as tall as Akar's second in command, Kaenas. Their uniforms were cut like those of other Jeggite warriors, but their alternating horizontal stripes of black and red gave them a bizarre, harlequin effect, which was heightened by their swift, stiff-jointed gait and the startling unison with which their red peaked helmets bobbed up and down. They were completely expressionless.

By the time Brewster joined his men, the ship had landed and the men went down to the locks. They were dressed in the meager clothes they had salvaged, in grimy coveralls and jackets, not talking much. Once or twice remarks brought laughter, but it was self-conscious and expectant. Yet they had taken on a certain bravado that was
close to swaggering, and when Brewster surveyed them, he liked their look.

The Argyres were directly outside. Kaenas supervised the opening of the locks. They opened slowly, and then the Argyres were outside, but none of them came forward, nor did any of them speak; their officers, who seemed to be marked by heavily-jeweled tunics, just looked into the ship and regarded the men.

The pause became awkward, and Brewster said to Kaenas: “We seem to be waiting for something.” But the next moment, as Akar came down the corridor toward the locks, not hurrying, Brewster saw that they had been waiting for him. He stood at the entrance of the locks, very erect, and exchanged sharp, silent salutes with the Argyres. Then he turned to one of his crew, who was carrying Brewster’s precious carton for him, and said something to him.

The Jeggite went up to the lock, not stepping out, and held the carton out for someone among the Argyres to take. The officers’ expressions remained stoic, but none moved. One of the Argyres finally let a bitter grimace cross his face and he cried out something, and far down the line, his words were repeated.

In a few moments, two short, stout little men dressed in spotless white came running up. They took the carton from the Jeggite and ran back with it. Then, smiling, Akar said to the Earthmen, “Goodbye,” and as they filed out, he shook hands with each.

Later, remembering the scene, Brewster wondered if the others had understood it, or had shared the sense of isolation he felt after Akar’s ship had blasted off. He thought not. They were glad to set foot on land again. The day was warm and clear and invigorating. One of the officers made a short, formal speech, declaring that the Argyres were honored to take the Earthmen to Ho-Tonda. . . .

They rode in vehicles that were transparent tubes, slender as ships, entirely enclosed and kept in balance by some gyroscopic device. Brewster, Abbott, Callahan and Drake went in one of the larger vehicles, together with four Argyre officers, the other four men with four more officers in the one ahead. The two large vehicles were kept in the center of the procession; smaller ones, seating two men, of which there were scores, kept fanning in and out like highly disciplined gnats.

It was a short ride to Ho-Tonda, and a silent one. Once Abbott started to say something about the episode at the locks, but Brewster shook his head. He didn’t want to talk just then, but what was more important at the moment, they were already entering the city, and the scene that greeted them needed all their attention.

Their reception was beyond their wildest fancy. It was not so much the fantastic din that the jammed streets of people raised, though their vehicle fairly shivered from its impact, nor was it the dense clouds of streamers and banners and strange, gaily-colored spheres that floated in air and kept exploding, as much as the people themselves that made the scene what it was.

For they seemed to be of every conceivable size and shape and color. There were tall Jeggites in flowing robes, and much taller, brutish people with a green cast to their skin, and short, stout ones such as they had seen at the landing field, and short, thin ones who were very dark, with skins that were oily and purple-black, like eggplants, as Drake remarked. And still there were others, with slender, elongated heads and bright rings on their arms and throats, and some who were as coppery
as the Jeggites, but who were small, with thick legs.

But one thing they possessed in common—their resemblance to humans in general, for they were, naturally, much more similar than they were different. And though there was a great variety to their clothes, there seemed to be no recognizable uniformity in what each of the different races wore. Ho-Tonda told its own story eloquently at a glance: it was a melting-pot, the great cosmopolitan capital of the Empire, and it had turned out in force to welcome the men from the world of Kren.

In all that mad ride—several times the Argyre patrols rode into the crowds when they overflowed—Brewster and Abbott spoke once. That was when Brewster pointed out a group of Estannars. Abbott nodded and made no reply when Brewster remarked that they hardly looked like prisoners or rebels, the way they were cheering and waving. Abbott had seen many other Estannars in the streets of Ho-Tonda.

Slowly, the procession wound its way to the heart of the city, and here it stopped before a pink, massive stone wall. Then the wall parted, opening a low, flat panorama of fields and gardens, and hundreds of heralds inside the wall began a mad tooting of horns, all of them in low pitch, like the sound of shell-horns used by primitive fishermen.

The wall itself was some forty feet deep, and from square niches that opened from its inner face, scores of mounted Argyres came riding to join the procession. Their mounts were clean-shaven, coal-black animals that looked like a cross between a horse and an antelope, larger than either, extremely nimble and sure-footed, with double, curved horns that added to their fierce demeanors. And the Argyres who rode them wore instead of the peaked red

helmets, masks that were made to duplicate the heads of their mounts, and the masks completely covered them to the neck.

They had left the people of Ho-Tonda behind. Brewster guessed that they had entered the Inner City. But he could see nothing ahead for at least a mile except another wall. The fields on either side were empty. There were strangely beautiful trees, and enormous flower beds that were riots of color, and pale pink streams that meandered lazily but there were no people. Only the Argyres in their vehicles and those on their mounts were in evidence, and behind them they heard the horns.

They reached the second wall and went through, and here were more heralds, in entirely different costumes, and more horns. From the interior of this wall hundreds of vehicles, twenty feet high, came riding on their one wheel. They were like moving pillars, each with a diameter of some five feet, studded with green cones like spikes in the hard, dull red, lustrous substance of which they were made. Their occupants, if there were any, were not visible, and these too joined the procession.

The land that lay between the second and third walls was covered with ridges. The valleys grew tall, blue grass and held ponds like pools of wine, and the hills held small forests that grew in geometric design. And still no people.

By then Brewster had noticed an odd thing. He had seen birds flying about several times, never close enough to make out clearly, but they had passed many dead birds. They lay in the fields, sometimes quite near the straight white road.

It was another mile to the third wall. This wall was shorter than the others, made of a strange substance, its top regularly spaced by small white domes.
As the procession passed through, Brewster let out an involuntary gasp, echoed by the others. For, though they had seen nothing beyond the wall from the other side, as they went through, a great palace seemed to materialize.

Its intricately curving, convoluted walls must have been half a mile in length. It was surrounded by gigantic flower beds and orchards, and streams with foot-bridges. It was made of something that looked like pink alabaster, with archways and windows and columns. Whole expanses of its walls were covered with detailed reliefs, many of them colored, shining like gold and ruby. It had three levels of terraces and great stairways, and innumerable banners hung in the breeze. And everywhere, there were people, dressed in various colors, but all of them with some red in their costumes.

This was a world of almost unimaginable splendor, the product of centuries of might, of rulers with incalculable labor at their disposal, but there was no softness to its luxuriousness. Rather there was a barbaric strength and vigor, a clashing that often bordered on the savage, and this only added to its beauty.

There must have been a thousand heralds in the gardens before the palace, and several times that number of Argyres, differently dressed, carrying strange lances and swords, until the eye lost the capacity for detail. The Argyres lined the paths and foot-bridges and terraces, and when the heralds stopped, and one could hear the voices of the thousands of people—the Argyres alone were silent—it sounded like the buzzing of all the bees in the universe.

Finally the procession came to halt in a large declivity, like an inverted, colossal mother-of-pearl shell, and the Jeggites opened their vehicles. The Earthmen came out and stood together without speaking until one of the Argyre officers motioned them to follow him. They walked across a stone foot-bridge and came to an enormous white stairway that led to the lowest terrace.

A LEAN, aged Jeggite dressed in a long robe of red with a great many stripes of different colors along the sleeves, walked down the stairway to meet them. Halfway down he stopped and began to intone a long speech. It was next to impossible to understand him, not only because his pronunciation was terrible and his voice high and cracked, but because no one stopped speaking while he made his speech. But when he was through, he inclined his head and evidently waited for the Earthmen to come up the stairway.

Only Purdom started forward, and then, seeing that the others were all looking at Brewster, and that he had not moved, Purdom came back. Brewster looked at his men. His head was reeling. He felt completely drained of feeling, and the same exhaustion lay on the faces of his men. It had been too much for them.

Brewster took a step forward and shouted: "Did you say you were taking us to a reception?"

As he spoke, a hush fell over the people. They were hearing an Earthman speak. The Jeggite inclined his head and said, "The Ho-Ghan is waiting in his hall."

Brewster shouted back: "We're tired!" His voice was too loud in the new silence, and there was irritation in it that he could not control in spite of himself.

The Jeggite said, in his quavering voice: "The Ho-Ghan is waiting in his hall."

Beside Brewster, Abbott whispered, "Careful, Nick."
Brewster jerked his arm away and shouted, louder than before, "We want time to rest. Tell the Ho-Ghan we'll meet him later."

They could not hear what the Jeggite said; his words were lost in the great flurry of conversation that followed. From the expressions of those he saw, Brewster knew he had shocked them. But he was angry now, and he stood belligerently, his eyes scanning the terraces and balconies, his lips set hard. His men and he were not going to be placed on exhibition to suit anyone's plans, or orders, for that matter. They were tired, and there was an end to it. Somehow he had felt a sense of power, the knowledge that they could assert themselves. But he would have done it no matter what he felt.

The Jeggite had been speaking all this while, but when silence returned again, and the Earthmen remained where they were, he bowed and motioned to an Argyre officer near him. He spoke to the officer, and the Argyre came down the stairs to Brewster.

"You will follow me," he said.

"Where?" said Brewster.

"One of the palace wings has been reserved for the use of the honored visitors from Kren. You may rest there."

"Thanks," said Brewster.

They walked up the stairway through a dead silence.

* * *

"And you still think so?" said Abbott. "On no evidence?"

Brewster leaned on the balcony and stared into the descending twilight. Everywhere little lights were springing up, like fireflies in a gray woods. Far off he could see the walls of the Inner City outlined by twinkling ruby lights, with quiet pools of grey land between them.

"It depends," Brewster said, reflectively, "on what you call evidence. Take that little episode when we landed. Akar not only took his time coming down to meet the Argyres, but he insulted them by having one of his crew try to give my carton to the Argyres. It was clear enough; the Argyres are above menial work. They sent for porters. But it was a deliberate act on Akar's part...."

The serving girls were returning with more food and drink, and their giggles floated out to the balcony. They were, as they had told the men hours before, from Hruthes, or Uranus, and they were small and round like the porters at the Argyre field, and like them, dressed in white robes trimmed with red. They had first appeared shortly after the men had been ushered into their quarters in the palace wing, and they had brought food and drink and gaiety with them, but the men had been unable to eat or enjoy their rather pretty, silly wholesomeness.

Instead, the men had slept for a few hours. The palace wing which had been given them contained twelve rooms, eight of them with huge beds, but the men had slept on couches in one of the four main rooms, preferring to stay together. They had found some rest, but not from the sheer splendor that covered every corner of the palace, from tapestried walls to giant carvings and soft carpets, and elaborate furniture of every conceivable substance, to high, vaulted ceilings and sculptured railings on the balconies of the four main rooms.

It was on one of these balconies that Brewster and Abbott stood. They had awakened almost together, before the others, and they had eaten while the men slept, and then gone out on the balcony to talk and smoke. Soon the Hruthian girls and their giggling had
awakened the others, and the men sat down to a strange, wonderful dinner.

Everything here was wonderful. In the settling dusk, the palace had become a fairyland, a world suspended, its boundaries suggested only by myriad lights. Below the jutting balcony lay a portion of the third terrace, its tiled surface bathed in amber light from concealed sources. On three sides, across the gardens and terraces, hung other sections of the palace, and wherever they looked, there were huge, beautiful rooms and people moving about. From everywhere there came laughter and gay voices, wafted along with the garden perfumes and the warm night air.

In the midst of all this, Abbott’s voice persisted in the conversation that Brewster had ended more than once. “But maybe it was just an incident. You’re attaching too much importance to it.”

“Maybe,” Brewster said. “I suppose in the end it all comes down to a feeling. I felt the hostility there. And,” he added, “I’d say it was you who’s attaching importance to things. What the hell are you so worried about? Why should you care so much what I thought?”

Abbott stood away from the railing and looked into Brewster’s face. The light that came from the room shone on the two men, one with a faint smile on his lips, the other almost grim. “Because, Nick,” said the grim-faced man, “I wouldn’t want you to make decisions that might affect the rest of us.”

BREWSTER turned away without answering. He leaned out over the balcony and smoked reflectively, and when he turned his head back to Abbott, he saw that Abbott had gone back inside. After a few moments he followed, curious about the general laughter that was coming out.

The Argyre officer who had led the men to the wing earlier that day had returned, and with him were two others. Evidently at his suggestion, several of the men had begun to put on the clothes that the Hruthian girls had brought with them, and it was the sight of Drake and Callahan in those clothes that made the others laugh. Heavy, horned-fisted Mike Callahan was strutting about, chest puffed out, crying out in an exaggerated brogue, “If only me father and five brothers were here to see me, dressed in the garments o’ the heathen an’ lookin’ every inch the fine lady!”

Brewster smiled. The clothes were two loose tunics like dresses, one of which reached just under the knees, the other to the waist. Both were a deep crimson, with a large horizontal band of pale green, very light and silky. Over these came a long, flowing cape of lustrous green, fastened at the shoulders and reaching the floor. The shoes were thin-soled, single-strapped, red sandals, sparkling with gems.

Abbott brought Brewster a pile of clothes. “We’re going down to a reception after all,” he said. “Seems the Ho-Ghan is still waiting.”

Slowly, Brewster began to change. Once two of the Hruthian girls started coming into the room and the men howled them out. The wines they had had with their dinner had put them in high spirits. Brewster said quietly to Abbott: “If you get a chance, remind the men that they’re to keep their mouths tight about what happened on Akar’s ship.”

“Why?”

“I promised.”

“They didn’t,” Abbott said, dryly. Brewster’s lips thinned to a narrow line. When he was completely dressed, he stood for a moment feeling the freedom of the clothes. Not for a moment
had he relaxed his scrutiny of the three Argyre officers as they stood near one of the doors, aloof and silent. He felt himself breathing rapidly, as if from some mysterious excitement. Uneasiness swept through him; it had come on him gradually, persistently, a sense of something impending. It was the kind of feeling he had come to know when hunting—the smell or knowledge or intuition of danger.

He could not shake the feeling off. The others were still busy. He ran his hands along his sides, and then he left the room passing through three doors to the third bedroom, which was his. His carton was in a corner of the room. He dug his hands in and pulled out a wide belt with two attached, flap holsters. Then he took out his automatics, put them in the holsters and strapped the belt tightly around his hips, under the outer tunic. The guns didn't show.

He heard the door behind him opening and he whirled. A stout little Hruthian porter stood there, holding out a hand. When Brewster didn't move, the Hruthian threw a folded bit of white paper toward him, closed the door and was gone.

Brewster picked up the paper and unfolded it. It said:

Don't be a sucker, Brewster. There's more to winning bets than playing the odds—find out what you're betting on. Interested in palace revolutions, maybe? It's a juicy two to one, in the bag, and you lose either way...

CAREFULLY, Brewster re-folded the paper, and as he did so, he looked up and saw Captain Akar coming toward him, coming through the rooms from the one where the other men were. Brewster put the folded note into one of the holsters.

Akar wore a new uniform. It was a black, tight-fitting warrior's tunic like his other, but much more richly adorned, with the bands of his rank in encrusted jewels, and a jeweled representation of a flaming stone on his chest. He strode through the intervening rooms so quickly that the long crimson robe he carried over his arm trailed after him. He came into Brewster's room and saw the carton.

"Your guns are missing, aren't they?" he said quietly. "It is nothing. They will be returned to you in a little while. Let us go down together," he finished, holding a hand out to Brewster.

Standing there, Brewster realized what it was that had slowly impressed itself on his mind. It was the silence in the room he had left. The voices had stopped. It was an odd thing, that silence near at hand, a still core in a world of noise, like walking into a vacuum. Through the frames of the three doors that separated him from them, he saw two Jeggite officers. They were backing away from something.

Brewster shot a glance at Akar's grim face. He started for the door, but with a quick step Akar backed into the doorway and blocked it. "Your friends," he said, "are waiting for you in the corridor. There is an exit closer at hand the other way."

Brewster backed off a step. The corners of his mouth twitched.

"I don't think you want to go in there," Akar said.

Brewster said: "You're wrong. Don't make me prove it."

Strangely enough, Akar bowed his head and moved aside without a further word. Swiftly Brewster went back through the rooms to the one he had left a few moments before. When he entered, the four Jeggite officers who were there turned to look at him. He
stood rooted to the spot, his eyes fixed on the sight on the floor.

The three Argyre officers who had been in the room were lying on the floor, sprawled grotesquely, face down. Something had burned deep, bloodless terrible wounds into the small of their backs just under the shoulder blades, and from these wounds, as in a small fire-pit, tongues of amber flame spread to devour their bodies. They spread evenly, with incredible speed, enlarging the horrible wound and racing along the limbs, and a slight hissing sound, almost the sound of a kiss, came from the flames. The room was filled with a sweet odor.

Over the flames, a little behind them, stood Kaenas and another Jeggite officer. The two Brewster had seen before stood to one side of him, and on the other side Akar stood, intent on the scene. Brewster felt a violent reaction in the pit of his stomach, but he turned back to look again, fascinated.

Now, as the flames destroyed the dead men, they divided the bodies into sections, and as they reached the ends of these sections, the four Jeggite officers bent over quickly and held cupped hands out to the fire. In their hands were gleaming receptacles. The several fires ate the last remaining shreds, flickered an instant as if they were searching for something, and then one after the other they leaped across the intervening inches of space into the waiting receptacles, which received them and were snapped shut. Then the Jeggites put the receptacles back into place. They were the blazing center jewels in the representation of the flaming stone that all of them wore.

SILENTLY Akar picked up a wine flagon and poured Brewster a glass. Brewster shook his head. He fumbled for a cigarette, remembered that he had left them in his trousers, and went to take one. His mind was so far away from what he was doing that he started when his lighter flicked on and the yellow flame danced in his hand. He took a long drag and let the smoke out, and he looked again to the floor where the Argyres had lain. No trace of them remained, not even an ash.

Akar walked over to him. "I told you once that you would be interested in our weapons. I would have preferred another occasion."

"This one was all right," said Brewster. "What was it?"

Akar smiled darkly. "A question of politics, shall we say, and leave it at that for the while?" He had, Brewster thought, a really smooth delivery for understatements. "A complicated question," he added. "I spared your friends this disturbance—perhaps it would be better if you made no mention of it."

"Look," said Brewster, "I don't know what's going on here, and I'm willing to wait on your say-so, but don't get the idea that I'm going to hold out on my friends too."

Akar nodded soberly. "As you wish, then."

A minute later Brewster and the Jeggites joined the Earthmen in the corridor. Three more Jeggites were with them. Following Akar, the entire group walked down the corridor. Suddenly, as they made a turn, a door thirty feet farther down the shining wing opened and six Argyres came out. Following them was a small, thin, very dark man with a nervous step, and behind him came four Hruthian porters. The porters were carrying a rigid stretcher, and on it lay a body.

The first of the Argyres to emerge had tried to go back, but the others had followed too quickly. They remained where they were, exchanging precise, formal salutes when the Jeg-
gites passed. As Brewster went by, he looked at the body on the stretcher. It was the corpse of the little Hruthian porter who had brought him the strange note. There was not a mark on him, but where he had had bright, curious eyes there were now empty sockets, gaping at the ornate ceiling.

"Nick, what is it?"

At the moment Abbott spoke, Akar had turned around to look back at the body, and before he turned back he swept Brewster with a long, searching glance which he made no attempt to hide—as if the chance of finding something on Brewster's face was worth the transparency of the effort.

Brewster kept walking without answering Abbott. He had halted involuntarily for an instant when he first caught sight of the Argyres; probably too, he had reacted to the sight of the body. But he was confident he had shown Akar nothing. He wasn't quite sure why, but he felt it was important that Akar should have seen nothing.

CHAPTER VI

She was tall for an Estannar. She was slender as a reed, and her hair fell in a pale golden shower almost to her waist, its sheen soft in the thousand lights. Once, when she danced by near him, Brewster thought he had never seen such flashing eyes. Their bottomless depths were more violet than her robe, and her lips were full and redder than the sandals on her feet.

The sight of her almost made Brewster forget everything else.

The Earthmen were on a slightly raised platform, the lowest of a group of several, in the great hall of the Ho-Ghan. They had entered without causing more than a little ripple of interest, coming in through a side door, but inevitably word of their presence spread among the more than three thousand people there. Yet this great hall, more dazzling than anything the Earthmen had seen, with its glorious sheer white columns rising from a deep ruby floor, its transparent walls through which the surrounding gardens were visible, its shimmering masses of gorgeously costumed, different peoples, its glitter and excitement and noise—all this was lost on Brewster after he first saw that lovely girl.

He might never have seen her if the awaited ceremonies had begun. But they didn't, and except for those who maneuvered into positions where they could get a close look at the Earthmen, whatever had been going on before their arrival continued with no interruption. Hruthian servants, scores of them, scurried about like an army of white ants, carrying enormous trays of food and drink; whole circles of friends stood talking with no regard for the dancers who had to dance right through them, and everywhere people jostled and called and laughed.

It had seemed to Brewster that a squad of Argyres far down the hall, at an enormous entrance, kept milling about and looking toward the platform. Looking about him, Brewster saw that numerous other Jeggite warriors, many of whom wore unfamiliar symbols on their tunics, had congregated in the vicinity of the platform, engaged in casual conversation, leaving occasionally to dance but always returning. But there were a great many Argyres in the hall, and Brewster was watching those nearest him when he saw the girl.

When she moved, a dozen men followed her. When she drank, she had to choose from a score of goblets that flashed before her. When she danced, the men she left took no other partners. Brewster couldn't take his eyes from her.
BESIDE him, Akar was talking about something, but Brewster hadn't heard a word of it. He was watching the girl dance an oddly graceful dance to music from an orchestra of massed strings, coming from some hidden source, and Akar's voice kept droning on. He turned to Akar then with a vacant look on him, and he interrupted: "Mow much longer are we going to wait here? Any idea?"

"Until the Ho-Ghan arrives."

"Do we have to stay here on this platform?"

Akar nodded. "Ritual forbids commerce with anyone in this court until you have been presented." As he spoke, the path of his gaze lay beside Brewster's. "Her name," he observed, somewhat absently, "is Suba, of the great Marannes family. Be patient, my friend."

Brewster scowled and turned to see what the others were doing. Callahan was matching Drake and Stewart huge draughts of wine. Purdom and Rogofsky were talking to Kaenas, asking questions and toasting the answers. The holiday mood was stronger than ever. For a brief moment, Brewster felt a twinge of danger. He couldn't place it, but it was there. He didn't like the way they were drinking. Even Abbott, who had been standing with Matt Peters a few feet away, came toward Brewster.

"What's eating you, Nick?" he asked with a loose smile.

Brewster shook his head, looking at his men, and then he took the glass Abbott held out for him and gulped it down. "Wow," he muttered, and when he turned around, the girl was quite near him. He gave Abbott the glass with a grave gesture, and without another word he stepped off the platform and began walking across the floor toward the girl.

The few people in his way stepped aside, so that a path kept opening for him. He walked with an arrogance that perhaps he himself did not realize, a lean, strong man with a face set as if for some perilous undertaking. He knew she had seen him coming, for the path to her had cleared moments before he reached her, as if by magic—or, he realized, as if more people than he expected had noticed the way he had kept his eyes on her, but she gave no sign until the last.

He touched her partner's shoulder and murmured politely, "Thanks, old man," and brushed him aside, and taking the girl's hand, he fell into the rhythm of the strange courtly dance.

She had smiled at him before she began dancing, so he didn't care much about the miserable job he was making of it. The steps were far too complex for him to have mastered from observation. But suddenly the music stopped, and the next moment the soft, gay strains of a Viennese waltz were filling the great hall.

HE STOPPED short. A glance at the platform showed him Joe Abbott and Akar smiling, and Abbott raised a hand and made his fingers do a jig in mid-air. By then Brewster had recognized the music—it was one of the records he had brought with him! At another time, any time but this, the circumstance would have started him to thinking, but now his gratitude asked no questions. It was perfect. He bowed gallantly and swept the girl into his arms. And then, to his added surprise, he saw numerous others in the hall join the dance!

Suba laughed. "We learned your dances in your honor," she said. "We were to have danced them after your presentation to the Ho-Ghan."

Brewster laughed with her. When he looked again to the platform, it was
empty. They were all dancing now—even Akar had taken a partner. So Brewster danced as he had never danced before, unthinking, letting the smooth waves of music sweep him along, and Suba Marannes was a magnificent partner. On and on the music went, until the world had become a whirling thing and the smooth floor had ceased existing. When he opened his eyes again, he saw that Suba and he were dancing alone in that vast ballroom!

So he stopped, beautifully poised and not the least whit embarrassed, and with a slight bow, he gave Suba his arm and escorted her off the floor. He led her through a door in one of the transparent walls and found himself in one of the lower gardens. Still holding her hand, he walked with her, saying nothing.

The night was full now, and the sky a dark mystery. There were luminous flowers in the garden, he discovered, but he felt no surprise. He wandered along terraces and up great stairways, until he was lost in the intricate vastness of the palace, and the hall seemed far away, its noise like the distant buzzing of insects. There was confusion in his mind, but somehow he felt strangely happy. It was a long time since he had felt the sense of isolation he loved so well, the feeling of being alone that gave him security and strength.

Yet, after a bit, the isolation itself seemed odd to him, for there were no people about, and they passed sentinel Argyres rarely, so that when he finally spoke—after wondering what he would say to her—it was to remark, simply, “There’s no one out here. I wonder why.”

“No one must leave the Ho-Ghan’s hall when he is expected.”

“Then I broke one of the rules?”

“At least one.”

“Perhaps I ought to take you back?”

She stopped and looked up at him. “Do you think you could find your way back?” she smiled. “But no, I wanted to get out, and I could never have done it without you.” She held his arm tightly and led him on. “Let’s go higher, as high up as we can, where we can look down on all the world!”

“The world,” Brewster echoed, shaking his head, a curious smile on his lips. “Maybe I’d better not start thinking about that again . . .”

UPstairs they went, past terraces piled on each other, past huge hanging gardens, past dark halls and great chambers, climbing up and up until before them there loomed an enormous circular structure with no openings in its deeply fluted walls. It was like the topmost tower of some immense building, but its roots were lost in the architectural masses that led to it. A long, sloping walk led to it, curling upward from its base like a thin serpent, reaching the very top.

There they went, climbing the walk, and when they had reached the summit, they stood at the edge of an alabaster bowl. A few feet away from the interior of the circular wall were columns that rose for more than forty feet, supporting a slender balcony that went all the way around the rim of the bowl. Except for this balcony, which was perhaps six feet wide, there was nothing over the bowl, and its only roof was the still night sky, and the bright winking stars.

Here, at the very top of the palace, they felt the vigor of the wind. Brewster leaned over the balcony, looking down at the darkly glistening floor of the great bowl, and then he turned to Suba. She stood holding the balcony rail, her face lifted up to the sky, beauti-
ful and strong. The wind played with her hair and caught her robe, pressing it to her body until it revealed every delicate line, the fullness of her breasts, the soft suppleness of her thighs. Standing there she might have been made of the same material as the stone balcony, until she turned her face to Brewster, and then she was too alive and vibrant for him just to keep looking at her, and he felt that if he didn’t speak he would let the moment carry him too far.

But even while he was wondering about it he knew that he had waited too long and that he had lost and couldn’t help himself. Later, he didn’t remember how it happened. The intervening moments were gone, and she was in his arms and he had kissed her. He didn’t know how much like a dream it was then, until it had ended, but while it lasted it was like nothing he had ever known.

Fragments of thoughts drifted through his mind, images like the swift review of life before the eyes of a drowning man. He knew again the intolerable cold brightness of the Moon before the crash, the amber fire burning the dead Argyres, the weary Estannar gasping an answer in the chair of truth, the myriad faces in the streets of Ho-Tonda, the first cigarette Akar had given him, the laughter of a Hru-thian girl... they passed through his mind without apparent meaning...

Or was it that in less than four days he had lived a lifetime? It was a dream, unsubstantial and chimera-like, filled with fantasy and half-truths. But this he knew to be true—this woman in his arms, soft against his throat, and the sky and the wind and the stars, and nothing else, not even, finally, his thoughts.

He dropped to his knees beside her. Through the hewn fretwork of the inner balcony rail he saw a white light moving over the floor far below them. It came from a long, taper-like object in the hands of a Jeggite, its nimbus so small that it illuminated only the upper half of his body, so that he had the appearance of a disembodied trunk floating erratically in the hemming gloom.

Erratically, because he was running, but never quickly. As he moved across the floor he changed directions again and again, and each time one of the columns near him glowed with a weird, white, opaque glow and opened like a tubular shell, and from its interior a Jeggite warrior would step out to stand in his path. Retreating then, he would take a few steps in another direction only to be confronted by new warriors, until finally he stopped and stood quite still, satisfied that there was nowhere he could go anymore. Yet the remaining columns—there must have been fifty or more—kept coming alive in the darkness and opening up and releasing warriors like black moths from cocoons, until they had formed a large circle around him.

Gradually also, these columns had spilled their light into the bowl, so that its interior was filled with a shallow, diffuse light, and this together with a line of slowly moving lights that now appeared, as if from over an invisible horizon at the far end of the bowl, provided enough light for Brewster to see everything.

He was a middle-aged man, dressed in a full robe of deepest crimson, with a stern though reposed face and long iron-gray hair. He stood in the center of the circle, turning from one warrior to the next with an expression that seemed merely curious, and this curiosity he turned on the advancing lights...
when they broke through the circle and came towards him, for they were long tapers such as he held, in the hands of five masked Jeggite warriors, and they formed a smaller circle around him, but none were closer to him than fifteen feet.

Though they wore masks, Brewster knew, their identity was plain, and was meant to be, for these were no ordinary warrior officers, both by their manner and their dress. The emblazoned insignias they wore were so splendid and large that they covered the upper half of their black-sleeved, red tunics. One wore three bolts like unfeathered arrows of emerald jewels. The second displayed a fiery red streak like the wake of a rocket. The third bore the amber flaming stone, and the fourth carried an ensign that might have been the amorphous, quivering mass of some protozoid, its body blue and its many eyes a deeper blue-black. On the tunic of the fifth was a pattern of diamonds, like a field of well-ordered stars. And all the other Jeggite warriors in the larger, still circle, and all Brewster had previously seen, wore one or another of those blazing heraldic symbols, though smaller ones.

In the hush that held the threescore men below, the central Jeggite suddenly spoke out. Though Brewster could not understand a word of what he heard, the deep acrimony in the voice and the casual imperiousness with which they were delivered impressed him, as courage and contempt for fate always did. And there was courage in the man, unmannered, insolent, controlled. He made only one gesture, and that was to thrust a finger at the one who wore the flaming stone, his robe whipping around him in great folds, his forearm muscular and knotted, and then he was through. He had spoken for less than a minute.

Still no one moved, and the center Jeggite laughed and threw his taper to the floor where it exploded with a tremendous white flash, and nothing of it remained. Then the five warriors moved in on him, their tapers held high, and one after another plunged the feebly glowing points into his body. He gave them no resistance, standing with his hand at his sides, and even after the five white shafts had sunk deep into his body, in his breast and his back, he stood there swaying, looking at them, the shafts moving with the effort of his breathing, until he sank to his knees, then to his hands, and then quietly, so quietly, he rolled over, as far as the shafts would allow him on his back.

Within a minute of the time of passing, the floor of the great bowl was empty—but strangely, though everything that had occurred until then had been precisely arranged, and the assassination had been accomplished with the simplicity and inevitability of a drama, its end was chaotic; it disintegrated rather than ended. The five warriors stepped back, their eyes for a time still on the dead man, and one by one they left the bowl in the direction from which they had come, hurriedly, not speaking to each other, some attended by officers who joined them, some alone. And those officers who remained went back to their columns and they too were gone, quickly, as though none wanted to be the last to leave.

But even after they were gone, the graceful columns retained much of their light, losing it so slowly that for several minutes the floor shone with the reflection of their luminous pallor. Gradually the light grew more faint, and the spaces between the columns were the first to return to darkness, so that the light formed fingers which pointed to the dead man, and the fingers shrunk
One of the five figures advanced, plunged his glowing weapon into the central figure's body...
away until the body was alone in the darkness and silence. Only then did the dead body begin to glow weirdly, with an inner radiance the color of blood, and the focus of the light came from five tangential points—and so bright did this light become that at one point Brewster could see that the dead man had worn only one sandal, as if he had not had time to put on the other.

That was the end, though none had stayed to see it. Soon there was darkness again.

**Nick Brewster** got up. He looked over the balcony to the floor below but he could see nothing. He closed his eyes momentarily, and the scene came alive again for him, though with the distant quality of unreality. It had come at such a moment that it might have been a dream, but what he felt within him was real. He met Suba's steady eyes for a moment before she turned away, and though he had already guessed the answer, he said to her, "What did it mean?"

Facing away from him, she stretched out an arm and pointed to the surrounding fields, to the walls that protected the inner city. Far away there were occasional flashes of light in the fields, streaks of livid green and once the sudden flare of amber.

"They are destroying the loyal Argyres," she said softly. "The War Lords have killed the Ho-Ghan. The dynasty has been overthrown. It has not happened in a great many years."

"But why did they do it?"

She made no answer, and when he turned her to him, her face was weary, drained of feeling. Again he asked her. "But you know," she said wearily. "You must know. It was because of you."

"What are you saying? What do you mean because of me?"

"I meant all of you—the Earthmen. They wanted to receive you quietly. They wanted the arrival of the Earthmen to remain a secret, so that they could use it to ferret out the members of the Estannar underground, for all who knew would be traitors. And they had quarreled with the Ho-Ghan until they knew there could be no retreat..."

"Who do you mean by they?"

"The Jevs, the War Lords. The Ho-Ghan had killed two of them secretly as soon as you landed on Boron. The Jevs were determined that your oath of fealty would be to one of their choosing. They took no chances on which side you would pick."

It was her last words that stopped Brewster cold. He still did not understand her, but there was something in her phrasing—and as he thought of it, in the other things she had said—"Because of us, you say?" he repeated, slowly. "Then you knew this was going to happen? You led me here so that I could see it! That's it, isn't it?"

She remained silent and he gripped her arms, holding her close to him. "Answer me!" he demanded. "You led me to see it!"

"Yes."

"And these other things you know—you've no business knowing them, have you? How do you know about these quarrels? How do you know what the War Lords wanted? How do you know so much unless you... you..."

"Yes."

"But why?" Brewster cried. "Tell me why!"

"I'll tell you why."

**Brewster** whirled around as he heard a hard, incisive voice behind him speak these words. He was face to face with Kaenas. The Jeggite had
silently come up behind them. He stood there, inches taller than Brewster, a dark figure with a darker face, so still that the dull gleam of his jeweled tunic did not waver, the wind whipping his cloak around him.

"Because the Estannars sent her to poison you against us, to use her beauty to blind you and make you believe the lies she—"

At that moment Brewster struck. All the strength in him lashed out behind that blow, and his fist smashed squarely into Kaenas' face and sent him staggering against the outer balcony rail. There he braced himself for an instant and Brewster was upon him, raining blows on his face, hammering his fists into the Jeggite's body, until he doubled and fell forward. And then, before he could think about it—though of course he had thought about it already, thought it through to the end—he lifted Kaenas high over his head and threw him out over the rail into space, down the precipitous drop from the tower's summit. For an instant his figure seemed to hang in air, shrouded by his cloak, and then he was gone, lost in the night.

Brewster stood at the rail, steadying himself, and Suba came to stand beside him. He took her hand away from him. "Let's go down," he said. "Let's get away from here."

"You believe me," she said.

Brewster looked out across the slender rail. Whatever had been happening in the fields of the inner city had long since stopped. From far off, welling up from below, he heard the muffled roar of drums, and he looked down toward the sound trying to create some meaningful form out of the confusion of lights. His hands trembled as he held the rail and his breath was still shallow and rapid.

"You were sent to get at me," he said. "Let me tell you in my own way. It isn't—"

"Answer me my way. I want to know."

"But you knew it your way before you killed a man to save me."

As her hand touched him he turned and seized her wrist and flung it away. "Get this and get it straight," he said, a soft, sullen fury in his voice. "What I did I did for myself, for my own reasons."

"And not because you love me?"

Her words stopped Brewster short. For a long moment he looked at her, and then he said, "You've got to understand that you've failed, if that's what you wanted. Don't make any mistakes—I don't want any part of this fight between you and them."

"Even before you're sure you know what it's about?"

"That's it. And you can get that simple message to your friends."

She stood before him defiantly, her eyes flashing, but when she spoke there was only sadness in her voice. "What you want doesn't matter. You're in this whether you want to be or not, and blind and vicious and selfish though you are, we need you. And we will have you. You've killed for me and you'll lie for me and kill for me again."

Brewster shook his head and sighed. "That makes two things you shouldn't have said," he said, softly. "Now get me the hell out of here before I say something I shouldn't."

But before he followed her, Brewster had to take a last look around again. The lingering sensations of a man waking from a dream were still with him. He could not believe that he had felt the things he remembered feeling, nor what he had seen... or done. When finally he looked down into the bowl he saw nothing, but he knew that somewhere in the darkness a body was lying
propped against strange white shafts that would not let it rest. Two murders had been done up there, and the reasons for either were not clear in his mind. . . .

WHEN they had almost reached the lower gardens, Akar came racing across a terrace towards them. All the way down they had kept picking up an escort of Jeggite warriors—the sentinel Argyres had vanished—and some of these had run ahead, evidently to where Akar had been waiting for word of them. He ran up to them, his usually impassive face torn between relief and smouldering irritation, and he addressed a terse, irate remark to the girl in his own language and then to Brewster, "Quickly! Follow me—there is still time for you to be last in line!"

As Brewster left the girl—she silently waving him to go—and ran along with Akar, he started to say, "It was all my fault. She didn’t want to. . . ." But he didn’t finish. He was startled at the realization that he was lying for Suba Marannes!

For some minutes before he had heard repeated blaring of horns and ruffling drums, but in his state of mind he had scarcely wondered what they might mean, aside from some kind of pageantry. For after what he had seen, he knew that the awaited presentation of the Earthmen to the Ho-Ghan would not take place, so that his first view of the court in its formal arrangement, glimpsed through the transparent walls, puzzled him.

When they came into view of that glistening facade, Akar stopped running and continued the rest of the way at a decorous pace, leading Brewster into the great hall through the side door they had first used. And here Brewster stepped behind Matt Peters and Tom Drake, who were standing apart from the rest of the Earthmen, while Sam Rogofsky stood before the lowest platform, between both groups.

The hall was arranged in masses of color, with the thousands of people in the court separated according to their races, making perhaps a dozen fan-shaped formations which faced three central, ascending platforms. On the lowest platform stood five men, all Jeggites, their robes red and their sleeves striped with many colors. One of them, Brewster saw, was the aged man who had addressed the speech of welcome outside the palace. Above and behind them were some forty Jeggite warrior officers—among them Akar, though Brewster couldn’t see how he had gotten there—dressed as Akar was dressed, each with the sign of his Jev.

On the highest platform, and Brewster’s breath escaped in a sigh when he saw them, were the five Jevs, the chief protagonists in the drama he had so recently witnessed.

They were unmasked now and he could study their faces, but there seemed to be little difference among them save in age. Resplendent in their tunics, cold-eyed, dispassionate, they seemed characterless except for their extreme military bearing and the might which lay on them. The eldest, his granitic face lined with age, was the one who bore the flaming stone; the youngest, who seemed no older than Akar, with a heavily scarred cheek that did not detract from his insolent handsomeness, was the one who wore what Brewster thought of as a protozoid.

Flanking the platforms were rows of drummers and trumpeters and dozens of robed officials, one of whom stood beside Rogofsky and spoke his name toward the platforms. Rogofsky bowed his head, accepted an enormous volume from the official and crossed
over, very unsteady on his feet and smirking, to where his friends waited. At a sign from the official, the drums and trumpets went off again and Peters stepped forward to have the brief ceremony repeated.

WAITING his turn, Brewster glanced around. The atmosphere of the court had changed tremendously; he had not thought this gay, almost frivolous court capable of such restraint. But it was more than restraint. When he looked at the faces of the people nearest him, they seemed dull and stupefied, as people look when they are drunk . . . or very frightened. Was it possible for an Emperor so mighty as the Ho-Ghan to have gone to his death so easily? Had there been none to fight for him? Were there none to mourn him? Was there not even to be a semblance of tribute, however mocking, to the memory of the ruler of so great an empire? But the drums were rolling for him and he went forward to receive the heavy volume, to stand with his companions.

He had no sooner taken his position when the entire court bowed their heads. A hundred men rapped their staffs like the crack of lightning. All who stood on the three platforms turned so that their backs were to the court. A single herald blew on a deep horn, a low, majestic, melancholy note, and all the lights in the great hall faded to darkness. And then, from behind the other platforms, rising so that it was higher than they when it stopped, a fourth platform rose up, illuminated by a soft, blood-red glow, the only light in the hall. On it, in a great, gleaming throne that seemed to have been carved from a single, unbelievably enormous ruby, sat a man whose face was covered by a silken veil that hung down from a pointed hood.

He was dressed in a robe of purest red, exactly as the man Brewster had seen in the tower had been dressed, and he was built the same way. His hands were clasped in his lap.

He nodded once, and lights sprang to life at the feet of those who stood on the platforms facing him. He nodded again and lights went on under the feet of the Earthmen. He nodded a third time, and officials ran behind the Earthmen, always facing the throne, and they hung something heavy and gleaming around the necks of the Earthmen. Then the throne began descending and the horn blew again, and when all the lights went on the throne was gone.

Still in silence, the five Jeffs left the platform and walked slowly through the length of the hall and disappeared. The instant the last one was gone, the formations broke and everyone seemed to be talking at once. The presentation was over.

"Well," Abbott breathed, evidently moved, "that was something."

BREWSTER watched Akar coming towards them. He fingered the pendant that had been placed around his neck. It was an uncut, jagged emerald hung on a silk green and red cord. The volume in his hand was bound in green leather. The first page bore Brewster's name written in gold script. The next page held the legend: An Introduction To The Civilization Of The Empire Of Jegga.

"For you," said Akar, beside him. "It will tell you much of what you will need to know of the interstellar worlds. They were prepared especially for you and inscribed by the Ho-Ghan."

"That was the Ho-Ghan we saw?"

"Yes. These jewels he presented you are the sign of his friendship and benevolence. Did you enjoy the ceremony?"
"A great deal." Brewster beckoned a porter and took a goblet off the preferred tray, Akar and Abbott doing the same. "Why does everyone seem so excited?" he asked. "No one’s bothering to dance."

Akar sipped his drink and nodded. "I imagine they were confused by the new order of precedence," he said. "You see, caste and rank are very important among us, and the order in which the ranks were placed tonight were quite different from previous ones."

"How so?"

"Excuse me," Abbott said. "I see a young lady I greatly admire."

"Your interest in us seems unique," Akar observed with a slight smile, indicating the other Earthmen who were all scattering, some to take partners, some to talk to other officers. "As I was saying, the old order held only three ranks. The bottom platform was for Jews, the one above them for Regios, and the third for the Ho-Ghan. Tonight, due to the Ho-Ghan’s gracious command, the Regios were lowest, and a new caste, the warriors of Jegga, were placed over them, followed by the Jews and the Ho-Ghan."

Brewster waved his glass. "From the commotion it caused, it seems to have been quite a change."

"It was," Akar acknowledged. "What about the Argyres? There were a lot of them around."

"You’re very observant."

"I’m more accustomed to drinking than my friends."

"Or perhaps the night air helped," said Akar. "The Argyres represent the Regios, the civil governors, forming a sort of civil police. In Ho-Tonda, the Imperial City, they were, naturally, the Imperial Guard, but with the elevation of the Jews and the warrior caste, many of their functions will fall to others. I trust you understand?"

"Everything except that remark about the night air."

"Your pardon. I have no wish to intrude. I merely meant to comment on the change that appears to have come over you since you left the hall with Suba Marannes."

"I didn’t think it showed," said Brewster. "Tell me about her. Who is she? What does she do? I can’t make her out." He had been looking for her all this time without being able to find her.

"Her family has lived on Jegga for many centuries. They are very wealthy and influential people, merchant princes. Her grandfather is a widely respected man, having twice been decorated by the Jeggian Regio for service to the Empire. She herself is—how shall I put it?—occupied chiefly with the social world, with travel and sport and with whatever man seems to suit her at the moment."

"She’s had a lot of men?"

"She has been married five or six times."

"What?" said Brewster, considerably surprised. "It’s incredible!"

"But true. If you get to know her, you may understand, though I doubt if she will remain in Ho-Tonda much longer. One doesn’t enjoy seeing one’s friends fall from power. Like most Estannars, she generally moves in circles close to the Regios—a natural enough preference since Estannars dislike the inflexibility with which we warriors handle their venomous rebels. After tonight, Ho-Tonda may not suit her tastes."

"I see. It’s all very complicated. I thought at first that all Estannars were rebels, but of course I was quite wrong."

"Quite," Akar agreed, "though there are several schools of divergent thought
on the matter. It is an age-old question."

Brewster was silent then, leaning against a nearby pillar as he sipped his drink and looked on thoughtfully. Had the tension he had felt before been the work of his imagination? There was noise and gaiety again, and drinking everywhere. Glenn Purdom whirled by, dancing, calling out something that was lost in the confusion and Brewster absently waved to him. His mind was a seething turmoil, filled with countless questions, and a heavy weight lay on his heart. Suba was nowhere to be seen. . . .

Presently he turned to Akar and bade him good night.

But there was no sleep for Nick Brewster. Several times he had dozed off, only to toss fitfully and awake again, to hear the music from below still going on, hearing the laughter, the luxury of his bed strange and oppressive. Now it was quiet. He listened to his own breathing, unable to understand why it was so quick and troubled. A heavy smell of smoke seemed to lay in his lungs.

He sat up and flicked a button which turned on a soft night lamp. A thin veil of smoke hung in midair, passing slowly to the next room. Beside him lay his guns and a pack of cigarettes. He took a cigarette and lit it, then he put on a robe and went through the adjoining rooms to the central ones that had balconies. The other beds were empty, but on the balcony he found Joe Abbott, still dressed. The horizon was lit up luridly by a great fire in the distance, smudged by clouds of smoke.

"I thought you were asleep," said Abbott. "I sneaked into your room before and helped myself to some cigarettes. Felt like talking. What do you think that fire is? It's tremendous."

"Be damned if I know. Where is everybody?"
"Gone, by now. They left almost half an hour ago."
"Who left? What are you talking about?"
"Don't you know?" said Abbott. "I thought you knew. The officers said you did. They've gone away—Stewart, Peters, Callahan, all of them. Funny your not knowing."
"Where did they go?"
"To a city named Lacus. It's not far from here."
"But what the hell for?"
"Some of the Jeggitte officers invited them. There's some sort of party going on there and, well, they'd been drinking and they had women with them and," Abbott shrugged, "they just went, that's all."
"Why didn't you stop them?"
"What for? They wanted to go." He looked at Brewster, adding, "Don't you see yet, Nick? No one's giving anyone orders anymore."

Brewster kept looking at the fire, not saying anything. When Abbott struck a match to light a cigarette, Brewster saw that Abbott was still regarding him.

"What the hell are you looking at?" said Brewster.

"A guy with something on his mind, I think. That's why I stayed behind. I thought maybe you'd want to talk it out. It's time, I think."

Presently Brewster said, "Maybe it is, Joe." He exhaled a long, thoughtful drag on his cigarette. "Joe, have you thought much about what's happened to us? What are we going to do here? All right, we're pioneers and great explorers, and we've come into something that . . . that," he cast about for words, and not finding them, he said, almost angrily, "—we're in a world that can't take us back to our world. Where do we go from here? What happens
tomorrow, the next day? Where do we go from here? Have you thought about that, Joe?"

"A little," said Abbott, slowly, "if I understand you. You can't mean that there's no way for us to get back. There are at least four of us who know enough about metallurgy—but hell, it's not the chemicals and blast furnaces and converters you're talking about. We know we can build a ship capable of taking us back... so what are you talking about?"

"About the things I saw tonight," Brewster began, but he stopped there. He had been on the verge of telling Abbott everything, but something stopped him. He had never confided in anyone, and he could not now. He had started something he had no desire to finish; he had already said too much. He ground his cigarette out, looking at the fire in the distance, then he turned to Abbott and said, "I'm sorry, Joe. I don't feel much like talking anymore. I'm very tired."

HE LEFT then, and returned to his room, surprised to find it in darkness, for he seemed to remember that he had left the light on. But when he turned the lamp on, he saw Akar sitting in a chair near his bed.

"I am very pleased that you didn't continue your conversation," said Akar, quietly. "I like a man who has the strength to stand alone." He nodded, adding, "I came here to tell you that I will be away for a few days. While I am gone, you may do whatever you like. I took the liberty of arranging for you to visit Dr. John Stevens. For the rest, I wish you a pleasant holiday." He rose to go, then, as an afterthought, he picked up the tunic Brewster had worn and turned it in his hands. He found a slight tear in the fabric of the green stripe, where part of the cloth was missing. From a pocket of his own tunic he took out a small piece of torn cloth and fitted it to the tear. It matched perfectly.

"Where did you get that?" said Brewster.

"The fragment? It was in Kaenas' hand when we found him. I took it before anyone saw. It might have been difficult to explain, though you are Kaenas' superior."

"Then you know I killed him?" said Brewster, slowly.

"Yes, I know."

"And you're not going to do anything about it?"

"But what can I do?"

"It was murder," said Brewster.

Akar shook his head. "One cannot murder one's inferior. One may take life away, but that is quite a different thing, the privilege of a superior. Kaenas' life belonged to the Jev Thyle, and he could punish you if he chose—but how can he learn of it unless I tell him? And how can I tell him, who owe you my life, my elevation from a lowly Captain of a warship to full nobility as Lanne, and the honors heaped on me because of the ring of conspirators you discovered."

He paused at the threshold and said, "If you leave the inner city within the next few days, you will be well guarded, but be careful. We are striking at the Estannars, and they may try anything in desperation."

"That fire outside?" asked Brewster.

"We are burning their quarter," said Akar, and he left.

It was early morning by the time Brewster fell asleep. . . .

CHAPTER VII

THE days that followed were tranquil, but none was without some event that wove an inner meaning in
Brewster’s life. From the day that he first saw the ruins of the fire in the Es-temporar quarter, to the time that he witnessed the capture and execution of a small cell of rebels, to his meeting with the mysterious, beautiful Vrita, to his visit to Dr. Stevens, to his unspoken quarrel with Joe Abbott—but it was an endless list, for each day brought something new, often strange, and Nick Brewster found himself in a life that fascinated him, a life in which time slowly ceased to have its old meaning.

From the very beginning, the volume that had been given him was an amazing storehouse, filled with fact and theory, stimulating him as nothing had in years.* He read and re-read it, familiarizing himself with this strange world in which he found himself. Its frankness, both in what it said and what it left out through ignorance, surprised and pleased him, and it brought him to begin learning the Jeggite language, to which he devoted an hour each day. He roamed the palace from one end to another, except for the Ho-Ghan’s own palace. Comparing what he had read of the inviolability of the Ho-Ghan’s life and what he had seen, he felt a cynical amusement and nothing more, and if he wondered who was now occupying the Ho-Ghan’s palace, it did not trouble him.

Whatever doubts and misgivings he had had faded away. As he had admired the discipline of the Jeggites, and been overwhelmed by their achievements, he discovered he liked the way they lived. If he did not believe everything he read, if their stands occasionally dismayed him, if new events came of the greatest Jeggite warrior in history, the one who had commanded the armies that first conquered the universe. And as the dynasty of Ho-Ghans owed their eminence to their force-walls, so too did each of the five Jevs owe their position to some invention of an ancestor, and the title and its secret was handed down through the years. To these inventions and secrets the Empire itself owed its security and existence, which accounted for the Imperial hexagon. The force-walls were deemed the greatest because they alone provided the impregnable defense. Without it, no weapon, no knowledge, could continue to dominate.

The five Jevs were of equal rank. The Jev Azevedo was known by his symbol of star-fields, for the first Azevedo was the one who had devised the secret of celestial navigation, who had constructed the great navigating boards that were still in use. Their construction was secret, and kept by the Azevedo family. No navigation board could be opened without wrecking it. No navigation was possible without it, unless for short distances—but the Empire was vast.

The Jev Ebils was known by his symbol of the fiery rocket. The original Ebils had lived thousands of years before, preceding even Azevedo, and he had invented the rocket ship, and its means of propulsion, so powerful that interplanetary commerce became possible.

The Jev Nastrond was known by his symbol of green bolts. His was the weapon that had made conquest possible. Since the first Nastrond, his descendants had perfected other weapons, all based on the same principle, the heat ray. It was used in small weapons and large, as automatic

---

*The Introduction to the Civilization of the Empire of Jegga was as complete a compendium as any of the Earthmen could have wished. It not only gave illuminating accounts of the history of Jegga, but of its customs and language, and of the interplanetary system as well. It seemed to answer everything; even the dead birds that Brewster had seen within the wall of the inner city were explained, and the explanation turned out to be simple indeed. The inner city had been built to protect the life of the Ho-Ghan, and just as there were walls and warriors to defend it on land, there were walls of force, invisible and unexplained, that kept the skies above the inner city inviolate. Anything that came in contact with these walls, either from above or below, was killed by the force, though the wall could not be penetrated. These same force-walls were in effect on the ground, sheltering the inner city, but the walls of masonry and the warriors who guarded them were added for purposes connected with tradition and grandeur.

The force-walls were the invention of the Lyrio dynasty, and to it the dynasty owed its existence. It was a secret passed on from generation to generation, though occasionally, when a Ho-Ghan was banished and his rule taken away, and a new member of the Lyrio dynasty elevated to Ho-Ghan, the force-walls were discontinued for a year, to demonstrate that the Ho-Ghan ruled by agreement of the Jevs, as well as his own power. The person of the Ho-Ghan was sacred and inviolate. He might be banished but never killed, never, in fact, touched.

As the Ho-Ghan was inviolate, so too were the Jevs. The title Jev itself came from the name (Footnote continued on next page)
along to worry him, they were unimportant beside the good he found. Brewster had lived dangerously, frequently in self-imposed hardship and deprivation, whether on his wanderings or his hunting and exploration trips, and he thus placed a high value on will and the ability and strength to live severely, but his wealth had taught him to enjoy luxury whole-heartedly. Luxury for him meant the time to read, to play, to understand people and life and the world, and it was a sort of state to which he felt true civilization aspired. But he did not worry if it would ever come. He already had it. He was a civilized man.

Still, once or twice, observing the Jeggite warriors, he wondered that they did not relax more often, and he remembered that seeing Akar in the luxuriousness of his wardroom aboard ship had seemed to him to be a contradiction. It was an interesting notion, but it passed. He found his every want anticipated, and because it was so much like the life he had known, there were times when he felt almost at home.

BUT there were shadows, too, and disturbances. The men who had gone to Lacus did not return. Tom Drake came back for a day and then went to rejoin the others. They were making a grand tour of Jegga, going from city to city, accompanied by Jeggite officers and women and hosts of servants. Once or twice, Brewster and Abbott spoke to some of them through Sinju, and their smiling faces were beginning to look worn from too much drinking and dissipation. On the fifth day of their abs-

rayguard and many other ways. Every derivative of the Nastrond Ray was made by the Jev Nastrond and his family.

Supporting the Nastrond Ray was the Jev Thyle's Flaming Stone. It was as strange and inexplicable a phenomenon as the Jev Ahriman's Anzus, for it was more than a weapon; it was a natural force. The Flaming Stone was the symbol for the Jev's control of intelligent fire. Against this fire only the force-walls were impregnable. The fire could devour anything, organic and inorganic, for it was a living thing in its own right and needed no fuel for its existence. Or so it was believed, for the Jev Thyle had said so and there were none to dispute him. The fire could be directed and controlled perfectly. It could, for instance, eat in a straight line, or to a predetermined point, and nothing could put it out except a secret knowledge, which only controlled it. But it was used also as a guard. For example, on Boron, the Earth's Moon, it served as illumination for landing fields, but also because its strange light could illuminate Borons without illuminating anything else. In the years following the conquest, when the Estannars began using Borons as their warriors, in the years when all the system waited for the first Earthmen to come, the fire became incalculably valuable. It was universally symbolized as a flaming stone, demonstrating its power, and was kept in jewels and stone bowls. The original flame was believed to be still in the possession of the Jev Thyle.

The Jev Ahriman's Anzus was a formless animal. It had at least a hundred eyes, usually more, and these eyes, properly controlled, had hypnotic power. The range of this power depended on the size of the animal and the focus of its eyes. An Anzus with two hundred eyes could hold more than a thousand men, dictating their thoughts and actions, directing their will. But the Anzus could be cut up so small that it was only the size of an eye. The eyes could hold men as far as a bright beam of light of 1000 dures (or some 5000 candle-power) could be seen, but if it could be seen, seeing it was not dependent on volition, for it could travel, unlike light, through closed eyes. In effect it was a transmitter of the thoughts of those who controlled it. There were believed to be countless thousands of them in the possession of the Jev Ahriman, and it was probably the most secret. But it had its limitations. In space its eyes could be seen, or felt, for fabulous distances, but the ships of the Jev Nastrond were known to be impervious to it, and it was believed he had used the Nastrond Ray in some new way to overcome it. Moreover, for some reason it would not live long away from Jegga, though it had first come from Phylades. It was, when large enough, very cumbersome and difficult to move, with no method of locomotion except by means of pseudopods, and if it had to move it often rolled over its own eyes, blinding itself. It had a distinctive characteristic odor, moreover, which was not pleasant, and which sometimes could be smelled, if several were together, farther than its effects could be felt.

These were the Jevs. There had been others, but their titles were lost in antiquity, or their secrets had been fathomed and their right to the title of Jev stolen and made common property. For the Jevs owed their positions to their might, to their lack of continued defense against each other and their consequent interdependence. Each
sence, Brewster spoke to Rogofsky in
the distant city of Chorcha and learned
that he and Stewart were taking a
spaceship to Hruthes. At first inclined
to order them both not to leave Jegga,
Brewster ended by wishing them a
pleasant voyage.

But he didn’t like it, and later that
day when Abbott put in one of his in-
creasingly rare appearances, Brewster
spoke about it. “I don’t like it,” he said,
soberly. “I didn’t like the idea of their
going in the first place and I don’t like
their splitting up this way.”

“Why not?” said Abbott, disinter-
estedly. “Afraid they’re not in good
hands? Seems to me you’re doing what
you want to do.” He paused in his
packing and asked, “Got a carton of
-cigarettes you can spare?”

“In my room,” said Brewster, and
when Abbott returned: “Going some-

had his army, his warships, his domain, but since
their power to govern was superseded by the
Regios, the boundaries of these domains were
fairly tenuous.

The Regios governed by virtue of a decree
from the Ho-Ghan. They were supreme in their
regios, or domains. They were appointed for life,
and their office could not be inherited, though fre-
quently the Ho-Ghan would appoint a descendant
of a previous Regio. The Regios had their own
armies, known as the Regis, or, in Ho-Tonda, as
the Argyres, and the name Argyre spread until all
the armies of the Regios were known by it. Of
all the armies of the Empire, only the Argyres
possessed all the weapons of the Jews—but none
of their secrets. The weapons were only lent to
them to enforce civil law, and as tokens of the
Jew’s loyalty to the Ho-Ghan and their subserv-
ience to the Regios.

Of the extent of the Empire itself, and of its
nature, much was said. The most recent census
had counted more than two thousand heavenly
bodies in the Empire. Though most of these had
been uninhabited during the centuries of conquest,
they were later settled by various peoples of the
System. There were several chapters outlining
the hardships of life on some of these bodies, and
the amazing nature of compensations that the
Jeggite scientists had developed to make life on
these bodies possible. They had, for instance, had
to irrigate, to produce oxygen, to prevent the
continued splitting of some planetoids, to duplicate
comfortable gravity levels, equalize air pressure,
and so on. Here too was to be found a survey of
the nature of interplanetary commerce, listing
some five or six thousand different articles of
manufacture, chemicals, vegetation, and other
things.

Included also were several essays of a philo-
sophical nature, examining the phenomenon of life
in the universe. Life had been found on all of
the other eight planets of the universe, Earth
alone excepted from the Empire. Not only was
this life more or less intelligent, but, within cer-
tain limitations, it was similar, at least in its dom-
inant form. For while there was a bewildering
variety of interplanetary life, with creatures of
every size, shape and description, the ascendent
form was more or less alike. The colors of their
skins might be different, or the ears pointed or
longer, or the chests larger, but basically they
were alike. And this, said scientists, showed that
Nature repeated a pattern, and this pattern had
everywhere proved superior to the other patterns
of Life. Some went further, to the history of the
Sun and the planets, but their arguments were
theoretical. The essential sameness of dominant
Life throughout the System was demonstrated by
the fact that inter-marriage and inter-breeding was
possible among all of them, and, in fact, there
were countless numbers of variously interbred
peoples along with the pure types.

The Regios governed as follows: One Regio for
Jegg, or Mars; one Regio for Estunnar, or Venus;
one Regio for Usau, or Mercury, and Hruthes, or
Uranus; one Regio for Ernos, or Saturn, and
Dorsis, or Pluto; one Regio for Ania, or Neptune,
and Phyidas, or Jupiter. In addition, Boron, the
Moon of Kron, or Earth, was governed by the
(Footnote continued on next page)
Suba Marannes or Vrita. He had been seeing them both. But it didn’t seem likely that they could mean Vrita, though he knew nothing about her, not even her full name, because his meetings with her had been secret. The mystery about her spiced their visits.

He had met her two days before, toward evening. He had spent part of the afternoon at the Sinju, tuning in Jegglan cities and places of interest on its broad screen, fascinated by its range and full color. He had only to call to a central switchboard to be transported to the cloth mills of Bundokari, the great plastic foundries of Jesudar, the farms that stretched for miles in the agrarian Toctai province, or the bustling canalport of Kardandan, transferring to the waterways the products of the System, newly landed at the Kael spaceport.

LATER in the day he had left the palace, changing his clothes to a grey civilian Jegglite robe and looking very much like a Jegglite in it, and eluding the nuisance of his ever-present bodyguards by a series of quick shifts through the connected balconies of the palace wing. He had left the inner city and hired a tyar, a two-wheeled vehicle similar to the ones the Argyls used, but which could unfold wings and blades and become a helicopter plane for longer distances. In the tyar he had gone to the uncultivated plains and woods some miles from Ho-Tonda.

The day before, Abbott had attempted to tell him of the samples of Regio of Estannar. The rest of the Empire was colonial, split among the Regios, and administered by a great many vice-regios and minor officials. There followed several chapters describing the physical and intellectual characteristics of the various races. Aside from such frank statements as those which referred to the brute strength of the Phyladrians, or the stupidity of the Hruhtians (though they were docile and good-natured) and the ugliness of the Ermosians (which caused them to be barred from most public places), there were accounts of the virtues and vices of the Jegglites and Estannars. Both were admittedly the most intelligent, but the Estannars were said to be without true inventiveness, without organizational ability, undisciplined, stubborn, and worst of all, effete. But, withal, they were often charming, witty, talented, and frequently rose above their inherent weaknesses. The Jegglites were strong, inventive, highly disciplined, natural leaders and governors, imaginative, and with little patience for weakness or inefficiency or stupidity.

The end of the volume concerned itself with history and law. Curiously, there were several essays which claimed that the Chinese people of the Earth had originally come from the Earth’s Moon. Actually, they were Jegglites who had, countless centuries before, gone to the Moon on their way to the Earth. All their attempts failed, and through the years a quarrel among them developed which split them into factions. These factions then attempted, individually, to reach the Earth. Finally one such faction did break through, landing in Asia, as Earthmen called it. But the entire faction went together and none ever returned, and the secret was gone with them. In time these people populated parts of Asia, and thousands of years later they produced the geniuses of the Jenghiz Khan, who was followed in six generations by the great Kubla Khan. The evidences of the same racial inheritance showed, however, in the similarity of many of their names and cities, and, in fact, the palace of Kubla Khan was a smaller replica of the palace of the Jegglite Ho-Ghans. And the symbol of modern China was still the Moon.

Going back further than that were accounts of early life on Jegga, how it had overcome its aridity with the genius of its canal builders, how the canals had influenced its early civilization. At first they had traveled along these waterways, developing vessels of great speed, which were still used in modern times. So too, the great cities of Jegga were still on the waterways, and though they no longer served their original purpose, they reminded Jegglites that these canals, with their red water, had been the arteries and life-blood of early Jegga. For this reason, the color of the Emperor was red.

Last was a catalogue of law—the laws of the colonies, of the various planets, of the Regios, of military law, and of the Ho-Ghan. Here were the laws of superiority and inferiority, worked out like tables of equality, so that, for instance, the same act performed by a Hruhtian and a Darzit was, on the one hand, a crime, while for the other it was a legal act. These laws filled fifty pages of fine print and concerned everything from property to ethics.

There was also an appendix which listed many common phrases in Jegglan and their translation, and a great map of Jegga.—Ed.
limestone and ore he had taken from the soil, for already Abbott had started thinking of the possibilities of producing steel, the first step toward getting back to Earth. But Brewster, busy with his thoughts, had been inattentive, and now he was checking up for himself. He had been unable to find Abbott that day.

He was walking about, climbing rolling ridges on the edge of a woods, when he first saw the second tyar appear overhead. For a moment he gave no thought to it. In his mind he was already seeing the construction of vast steel mills. He knew, and had known before, that every element needed was to be found within the System; he saw the buried coal mines, the limestone and iron ore pits, the flaming converters and open-hearth furnaces, the yellow molten rivers of steel, the bright hell of the ingot-soaking pits, the gigantic blooming mills—all of it he saw in his mind's eye, done as it had never been done before, using the far advanced science of the Jeggites to build his dream. . . .

But then it suddenly occurred to him that it must be Abbott in that other tyar, Abbott seeking him out. Before he could remember that Abbott could not have known where he had gone, he had run toward where the tyar was landing. It was already dusk and the sun was behind him, so that by the time he saw that it was a woman who had gotten out of the tyar, he was already upon it. He stopped then, and would have turned back except for the way she stood there, seemingly to wait for him to come closer, her face tilted curiously at him.

So he came forward to explain, searching his memory for the few Jeggian words he had learned, hoping they might add up to an explanation. "O morra . . . bahazrad . . . o ion," he faltered, confused because he realized he was saying "I am always wrong," and more confused by her beauty. For she was tall, very tall, and her black, lustrous, large eyes reflected the glorious fire of the setting sun, her soft olive skin glowing in that radiance, her long, slender mouth parted in a half smile and the teeth so very white against the red lips, her hair thick and braided, framing the straight forehead and the chiseled long oval face like a portrait of some Egyptian queen. She wore a gray silken robe like his, her waist shaped by a broad jeweled belt, her hips easy and angular, her hands crossed over her breast.

H ow expectant she seemed, how her eyes carefully scrutinized him from head to foot. And when she spoke, that same expectancy was in her voice, in the deep, husky voice that made Brewster think of velvet rubbed against the nap.

"O morra ezad bahazrad," she said. "I am seldom wrong."

"You—you speak English?" Brewster blurted.

"It would appear so, would it not?" she asked, her eyes never stopping their examination. "I caught a glimpse of you at the reception of the Ho-Ghan," she said, after a moment. "You were leaving. But now I see O morra ezad bahazrad. You are indeed a very attractive man."

"Thank you," said Brewster. He had regained his composure by then; a large portion of his twenty-seven years had been devoted to the quest and conquering of feminine beauty, and if he had never lost the ability to react freshly to the stimulus, he had learned to control it. He was proud of the fact that he could think on his feet, that his judgments were as instantaneous as they were accurate, and these and other talents were seldom used so well as they
were on women. It had once been said of him that if he were dying of thirst and a beautiful woman brought him water, he would first concentrate on the woman.

"You know," said the woman, "I like that speculative gleam in your eye. I hoped you'd have a gleam like that."

"You almost sound as if you came here to meet me," said Brewster.

"Ah, I like that. You've been around women. I had you followed after I saw you leaving the inner city, and then I came here. I thought you might enjoy a quiet dinner in the country."

"You have a secluded little lodge not too far away," said Brewster. "We'll be quite alone and we can talk."

"Rather a large lodge, but quite right otherwise. Tell your tyar you won't need him. Make sure to get his number."

When Brewster returned a few minutes later he said, "I'm considered rather a fast worker in my country, so my only request is have a little respect for my reputation. So far this is wonderful and terrible. What's your name?"

"Vrita," she said. "We'll let it go at that."

And as far as talking went, they had let it go at that, and it continued rather more wonderful than terrible. That night, far away in the still fastness of the forest in the Paipurth mountains, had been everything Brewster could have wanted. He had known several women whom Vrita brought to mind, fiery, extremely intelligent, restrained and passionate by turns, mysterious, but Vrita was the synthesis of all and something more, something elusive.

She had returned him to the outskirts of Ho-Tonda the next day, and that night, after he had fallen asleep, he woke up to find her in his room. Fa-
tiqued as he was, his mind filled with the things he had seen that day in Ho-Tonda, he was glad to see her. She refreshed him, she soothed and calmed him, and when for a little while he was able to forget what he had seen, it was easier to forget entirely.

He had gone to Ho-Tonda that day dressed in the civilian robe, for it avoided curiosity and crowds and so made his bodyguards' task easier. He had not attempted to evade his guards that day; he had found new ones that morning, and upon inquiring after the others, he was told that they had been executed for failure in duty.

It had shocked him at first, learning that what had been a light-hearted maneuver for him had cost two men their lives, and then it had infuriated him. He sought out the Jeggite officer, a Lanae, who was responsible for his safety and told him in measured tones that he refused to have bodyguards. The Lanae, old enough to be Brewster's father, told him that his own life depended on Brewster's safety, and that since he valued it, he would not hesitate to execute as many bodyguards as he had to, until this process of elimination would finally furnish bodyguards who could not be eluded.

"That's a damned cold-blooded thing to say," Brewster had said. He found his rage useless against the man's calmness. "That's the—"

"But reflect a moment," said the Lanae. "It is you who is being cold-blooded. The lives of these men now depend upon you."

So that in the end, when Brewster went to Ho-Tonda, he was accompanied by some six or seven Jeggites; he wasn't sure how many there were because he wouldn't let them get too close and they were dressed in civilian clothes, but he had agreed not to attempt to get away. He took a tyar to
the city itself and there walked toward the Estannar quarter.

The fire that had raged for four days had finally burned itself out, though black columns of smoke still spiralled into the sky from smouldering areas. There were dense crowds for blocks around the ruined quarter, milling against the cordons of Argyres and Jeggite warriors, and Brewster found himself unable to get closer than two blocks to the edge of the quarter. But even from where he stood, jostled on all sides, he could see gaunt, charred skeletons of stone buildings and hear the roar of a fresh fire springing to life among the embers. He listened to the conversations on all sides, not because he could understand them, but because he understood enough from their intonations and actions.

WAS there no sympathy for the Estannars among all these people? Vrita had told him the night before, when he spoke to her of the fire that was then still raging, what had happened to the Estannars. She had spoken vaguely, not wanting to talk of it, and he had not pursued it, but he had heard enough to prepare him for something bad. He looked about him, trying to understand.

Here and there would be a sad-eyed Phyladian, towering even over the Jeggitites, their brutish faces impassive and tragic as they gazed at the ruins, but they were the only ones who seemed affected. The others, the shifty Usuaus, laughed uneasily; exchanging rapid comments with the curious Anaians, the slow-talking Darzists, and once, when a group of Argyres came charging through the crowds, chasing an Ermosian and hitting him over the head with long pikestaffs—for Jeggian law forbade Ermosians from public gatherings because of their ugliness—even the dour Phyladians joined the laughter.

They were no different, Brewster realized, from comparable mobs he had seen at such occasions; they were vultures, gawking and gossiping and titillating their nerves with the view of disaster, and they disgusted him no less than other crowds he remembered. He had many times had reason to hate mobs.

His revulsion made him impatient and careless. He began pushing through the people, elbowing them aside. They cried out at him, hurling insults at him, and one stout Phyladian put a hand against Brewster's chest and pushed him back some five feet with a gentle shove. And Brewster, already simmering, boiled over. He surged back at the giant Phyladian, and instantly, where a moment before there had not been room enough for him to pass, there was now a cleared area. The giant saw Brewster coming toward him and came to meet him, his enormous arms stretched out before him as if to seize Brewster and throw him somewhere.

Brewster stood there until the last instant, then he suddenly ducked under the extended arms and buried his left fist in the Phyladian's belly, then his right, then his left again, short, murderous blows that hit like hammers. Then he backed away, and as the giant's head came down, Brewster landed his right fist on the side of the man's face with such a furious, full-bodied smash that the giant literally flew off his feet, landing at the edge of the cleared area. And then, before the Phyladian could get to his feet—for he was rising, though he swayed like a dying ox, one eye closed tight—and, while Brewster waited ready to hack him to bits, over the screams and yells sharp whistles blew on all sides and Brewster's bodyguards surged through the crowds.

In a moment they were joined by Argyres. They would have killed the
Phyladian if Brewster had not stopped them. But stop them he did, and then, when they were taking the bloody brute away, he remembered the fate of his bodyguards and he said: "Don’t do anything to him. I want him brought to my quarters this evening. That’s an order, and if it’s violated, I’ll have a new set of bodyguards in the morning."

The strange language he had spoken, as well as the perplexing circumstance of this apparent Jeggite being so well attended, so inflamed the curiosity of the crowd that Brewster’s bodyguards had to get him away before his identity might be guessed, for then, they told him, it would take an army to clear them. So they hustled him down into the cleared area of the ruins, where he had wanted to go anyway, and there he saw the capture of several Estannars, and there too he met Suba Marannes again.

In the company of his guards and Argyres, Brewster walked through the devastated blocks. It stretched for perhaps a quarter of a mile, two or three blocks deep, paralleling a series of branch canals. Everything, docks, warehouses, piers, had burned to the water’s edge, and though from the rubble and charred remains Brewster knew it had been a natural fire and not the work of the Jev Thyle’s flame, the destruction had been almost as complete.

Patrols of Argyres and warriors were everywhere, poking about in the ruins, but when Brewster had been there no more than a few minutes, he saw patrols running toward a point some distance away where official tyars, the only ones allowed over the area, were dropping. By the time he reached the fire-blackened pier that had become the center of much activity, the place was filled with warriors and officials and a sprinkling of civilians, several of whom were Estannars—the first he had seen that day. There was a good deal of commotion, with the Argyres spreading out in a large semi-circle around the pier, and it was impossible to see what was going on.

Suddenly everyone began moving back. Warriors came up from under the jutting skeleton of the pier, carrying the bodies of five men whom Brewster saw were Estannars. They had been hiding under the ruins, breathing through hollow reeds like the ones which lined the canals, and they were so utterly exhausted that they could not move. All young men, they lay where they fell on the sandy beach, their clothes in seared tatters except for thin belts which hung heavily around the waists, holding several bulky pockets.

Warriors carefully removed these belts, and then a Jeggite officer went among them, examining their faces patiently. After a moment he stood up and pointed to one of the men. A murmur ran through the people near the pier. Looking closely, Brewster saw that the man who had been singled out was odd-looking for an Estannar, with the wiry smallness of a Usau and somewhat darker hair than the others.

They killed that man where he lay. The others were dragged erect and half carried to a waiting tyar. They were taken directly past where Brewster stood, and as he studied their faces, seeing that they were already half dead from fatigue and exposure, he backed into the assemblage of officials and civilians. Then he felt a hand close on his.

So Taut was he, and so swiftly had he turned around that he saw the fleeting change of expression on Suba’s face before she had had time to adjust herself, for evidently she had touched his hand the moment she recognized him.
standing just before her. For a brief instant he caught her surprise and fright—or had it been fright?—but it disappeared immediately and she said something to him in Jeggian, pleasantly, quietly. He understood only one word: "hello."

If it had not been for the constant pressure of her hand on his, he might have spoken. As it was, she had inconspicuously taken him off to one side. "What are you doing here?" she asked, her voice barely audible. "What made you come here?"

"I don't understand," said Brewster. "I'd heard about this—the fire, I mean. I thought I'd look around. What's the matter?"

A cloud had sped over her face. "These men near you are your guards?" she said quietly. By then her quick eyes had seen the guards hovering closely, and her intelligence had organized everything. The cloud was gone and she was smiling, chattering very casually. "I think you've seen everything," she said. "I'll go back to the city with you."

He hadn't wanted to go with her. He didn't know whether it was because he wanted to stay or to avoid her. At any rate, he got no chance to answer, for she walked away quickly. A few yards away several Estannars and Argyres were waiting before an official tyar. She spoke to them and they all looked curiously toward Brewster. They left without her, she waving to the ascending tyar, and then returned to Brewster.

"It's impossible for anyone except officials to get tyars here," she said, "but I'm sure you can get one. Tell your guards to ask a Jeggite officer for one."

Brewster looked at her and saved his curiosity, but he asked for two tyars; he wanted to talk to her alone. The request produced the expected stir. A guard of honor formed and a Lanae who was present introduced himself and provided the tyars with a graciousness that scarcely hid his inquisitiveness. Brewster stood there politely ducking questions until they left.

The moment they were alone Suba's cheerfulness collapsed. Her smile fell off unnaturally and she sat pressed in a corner of the tyar without saying a word until the retreating ruins were out of sight, and then she quietly said, "Your being in our quarter this afternoon was an unfortunate coincidence, but I am greatly obliged for your kindness."

When she didn't say anything after that, Brewster let his impatience out. "I think I deserve at least a rudimentary explanation."

"Yes," she agreed, but several moments more went by before she spoke. "Those men who were waiting for me were my father and two of my uncles. The Jeggites have been pretending to think my family had a hand in hiding those rebels. Your presence there, where they might infer you had been led, was most unfortunate under the circumstances. They might have said you were led there to give rebels a chance to kill you. As it is, they may still say it, but you have been very kind."

"Kill me?" said Brewster, confused. "They wanted to kill me?"

"I don't know. I think they were meant for you."

When she said nothing else, Brewster said, "I don't think I've understood a single thing you said. Not one thing."

She turned to him. "You haven't heard about Chorcha?"

"I don't even know what it is."

"And you don't understand about the fire?"

"I'm not sure. I thought I did."
"What did you think the fire was? Why was it set?"

Brewster hesitated. "I thought it was... well, I thought it was a general punitive measure against the Estannars. I imagine they cleared out the inhabitants and burned down the quarter to force the Estannars to leave Ho-Tonda."

"You think the entire Estannar quarter was burned down?"

"Yes," said Brewster, "though it seems like a fairly small—"

She interrupted. "The Jeggites burned down only that part known as the Marannes quarter, my family's docks and warehouses, and the homes of the people who worked in them."

"I don't understand. Why only that quarter?"

"They had found out that a rebel cell was hidden there."

"You mean," said Brewster slowly, "that an entire section of the city was razed just to get at those five rebels I saw caught?"

"Yes."

"But surely the Jeggites could have found them some other way?" said Brewster. "I know something of their capabilities."

"Yes," said Suba, softly. "They are very capable monsters."

"Look here!" Brewster exploded. "Suppose you stop giving me these half answers and vague hints and questions that lead nowhere! Or if you don't want to talk, say so and..." His anger subsided before her suddenly taut face. It was as if he couldn't hurt such loveliness, he thought, annoyed with himself. He couldn't hurt her and that was that.

But then she began speaking, her voice still soft, and she never looked at him but kept her eyes on the horizon, and he felt that she was very distant from him all the time she spoke.

"Two hours before dawn, on the first night of your arrival in Ho-Tonda, thousands of warriors encircled the entire Marannes waterfront. The warriors had already seized power from the Argyres. The Jeys sanctioned an act that even the Regios would never have allowed. They gave no warning to the hundreds of people who lived and worked in our quarter. A score of fires started simultaneously throughout the quarter. Less than half the people trapped there escaped with their lives, and they ran into waiting cordons of warriors. When the rebels they sought were not found among them, they waited for the fire to subside and then searched the ruins until they discovered them under the pier..."

For a moment she turned to Brewster, her eyes savage with dark purple light. "You say there must have been other ways to find the men they sought—but there was no better way for their purposes. The Jeys could hardly have thought of anything better to demonstrate their ascendancy. They killed hundreds of Estannars and struck a public blow at the Marannes family, not only by their wanton destruction, for we are wealthy enough not to feel even such a loss, but by showing that Marannes property had been used to shelter enemies of the Empire."

Brewster was thoughtful for a moment after she finished speaking, and then he said, "But they were right, weren't they?"

She turned on him, fury in her. "Right? Right to kill—"

"I mean they were right in believing you had sheltered rebels."

"No," she said. "None of my family could possibly have done it."

"I'm not talking about your family. I meant you."

"I had nothing to do with it."
"You didn’t know they were there?"

"No."

"Then it was just a coincidence that rebels were found in the property of a family that has a rebel member?"

She flushed, but her lips were steady. "Yes. I am not lying."

Her words brought Brewster up sharply. He had been about to say that the responsibility for the terrible loss of life, no matter how cruel the Jeggites were, was actually hers. But now he remembered with a recurrence of that queer sensation that he was talking to someone who could not lie—that if she gave him an unqualified denial, he had no choice but to believe her.

He shrugged. "Then how did you know those rebels were here to kill me?"

"I didn’t say I knew," she said. "I only think so." She looked down at the city hundreds of feet below them, the hum and bustle of its life a steady sound in the silence.

"I thought at first the Jews had fired our quarter to injure us, on the pretext of hunting rebels. Today Argyres from Chorcha reported to the Regio. Rebel cells had been discovered in every city your friends went, this morning even in Chorcha where they were expected. The Regio informed my father, knowing how bad it would be for us if they actually did find rebels in our quarter. When they found them I saw it could not be an accident that they were everywhere you Earthmen were—they are special agents called Konos, assassins, sent here from Estannar itself."

"Have you any idea why they chose your quarter to hide?"

"It was clever of them. The Marannes family’s position and well known loyalty would make our quarter an ideal hiding place ordinarily."

Brewster could not help the trace of a sarcastic grin, but he forbore comment. Still, something was definitely wrong with the story as it unfolded. He pursued it. "It seems," he said, "that these Konos were trapped here in the fire the first night we arrived. If they came to kill us, why weren’t your orders in line with that? Or were they?"

"No!" she said, sharply. "My orders were to conciliate you, to win your friendship and trust until you would believe us."

"But that same night there were already men in Ho-Tonda who were here to kill us? Doesn’t that seem wrong to you? Isn’t it possible that you’re mistaken in your analysis?"

"The analysis is not mine. The Konos they found in Chorcha and the other places all told the same story. They had come to kill you."

"It still doesn’t make sense," Brewster pointed out.

"I know," she said, meeting his glance. "It will when I have found out."

BREWSTER doubted it. "Do you know what happened when we landed on Boron, or in the ship that brought us to Ho-Tonda from Boron?"

"No," she said very slowly and quite puzzled.

That was it, of course. After the break on Boron, and after the mutiny on Akar’s ship had failed, the rebels had decided their only answer was to kill the Earthmen. Acting independently, as they had to for safety, they dispatched killers to Jegga. Meanwhile, those who still operated under the previous orders were trying to conciliate the—

What nonsense! Even that neat theory had a tremendous flaw in it! The rebels had planned to prevent the Earthmen’s falling into the hands of the Jeggites—Dramon the Estannar
himself had admitted that he would sooner have seen them dead than taken by the Jeggites. The failure of those plans had decided them to kill the Earthmen. Fine, as far as it went. But —the very fact that Suba had been ordered to win Brewster over already presupposed that he was in the hands of the Jeggites!

What did it mean? Had the rebel chief first sent Konos, then changed their minds and been unable to call their killers off? The ones trapped in Ho-Tonda, perhaps—but what of the ones in the other cities? Was there no communication among them? Or was there more than one source of orders? In any case, the rebels were a badly muddled lot and he pitied their puerile attempts at revolution.

But what of the Jeggites, he asked himself, irritably. Did he yet understand what the mutiny aboard Akar's ship was all about? Did he yet know why Jeggite should have been pitted against Jeggite? Even if he assumed that the mutinous officers had been Argyres—in disguise, say—how did that explain their connivance with rebel Estannars? Then he dismissed it, temporarily. At least there was sufficient order and intelligence among them to have uncovered these rebels. He was grateful for that, though he felt contempt for these confused plotters. When Akar returned, he would have it out with him. It could wait.

He said: "Well, now I understand why you were so upset when you found me at that pier. First you thought I was alone, so you tried to pass me off as a Jeggite before I could spoil it by speaking English. When you saw my bodyguards, you realized it was no use trying to conceal the fact that I had been there. But you might have tried getting me out of there without stirring up that fuss. You wanted everyone to know I was there, didn't you?"

She nodded. "I capitalized on it. I demonstrated we were good enough friends to leave together. If matters grow worse we may need even the suggestion of powerful friends—and you are powerful, make no mistake. The Regio is a figurehead now, and the Argyres quickly made their peace with the Jews when enough of the loyal officers were killed off. You'd think life was valueless to them," she added softly, "but it isn't so . . . not their lives. . . ."

"And your life? Aren't you ever afraid they might seize you and . . . and, well, make you answer some questions?"

"A silly girl like me?" Her laughter was gentle, bitter mockery. "They'd never suspect me. Why should they bother with someone whose only interests in life are foolish rounds of fun? I travel and hunt and dance and have picnics and little else."

Little else except get married, Brewster wanted to say, but he said: "What if any of your family knew about you? What if they were to be questioned?"

He couldn't understand the irritation he felt.

"No one knows. And my family is too powerful, too famous. They wouldn't dare," she said. She said it again, as if to reassure herself. "They wouldn't dare. They never have dared . . . until now . . . ."

Brewster thought she was going to cry. "I meant to ask you," he said quickly. "When they found those five rebels under the pier, they killed one of them immediately, an odd-looking fellow. Why was that?"

She hadn't cried, after all. She turned to him, seemingly surprised that he had asked that question. "But he was a Bheynor," she said. "He was the off-
spring of an Estannar and another race, a Usau, I think."

"Is that forbidden? I don't understand."

She looked at him. "Have the Jeg-gites told you nothing?" she said, unbelieving. "Don't you know that the punishment for intermarriage between Estannars and other races is death for all concerned?"

"I didn't know. Why is that?"

"Why?" Suba echoed. There was a distant look in her eyes when she spoke again, a kind of nonsensical visionary look, as Brewster mentally characterized it, and her voice held a sort of cold passion, more in her words than anything else, for her voice remained quite soft.

"Because sometimes the offspring of such a marriage looks like an Estannar without inheriting the curse of our race—sometimes it can lie. It can go among the Jeg-gites and confound them, and so they call these invaluable allies Bheynors, which means: able to resist. But they are wrong, for in that sense their malevolent empire is filled with Bheynors. We are all able to resist, each in our own way..."

Brewster let the ensuing silence remain unbroken. He was tired of her little orations. They only provoked his impatience. When the tyar landed not far from one of the gates to the inner city, Brewster quickly said his goodbye. "If you can use my help," he offered, "don't hesitate to call on me."

After he had left he was sorry he had offered his help. He had no interest in helping her or any of her cohorts. She was a beautiful woman, but why in hell should that make any difference? When he compared her to Vrita, he wondered which of them he would sooner have taken to the mountain lodge, given his choice and other things equal. Not that Vrita was... hell, no, but there was a kind of innocence about Suba that had a tremendous appeal for him. Strange, that innocence, in a woman who had been married six times. Or five times. Probably an invaluable quality in a spy, that ability to appear innocent.

He had been suddenly stirred for a moment when she told him about the Bheynors. A wild idea had flashed through his mind... something about her marrying so often as a trick, to bear those curious hybrids for her cause... absurd, of course, because her marriages were only too well known. She might, though, marry an Estannar as a blind for mating with someone of another race. Then where were the children—surely so well known a person couldn't hide a brood? If anything, this new aspect that had at first excited him and why?—only galled him more when he examined it.

HE HAD been in a bad mood when he returned to the palace, and the Phyladian who was waiting for him hadn't helped any. He had completely forgotten about him until one of the guards asked if Brewster wanted to see him. They brought in the giant, his huge skull bandaged and his greenish skin discolored and bruised, and Brewster had nodded and told the guards to let him go peacefully.

But then the Phyladian had refused to go, and his deep voice had rumbled on in a distressed monotone, and the guards were preparing to use force when Brewster stopped them. "What does he say?" Brewster said.

"He thanks you very kindly for your mercy, O Fyavo."*

So Brewster had nodded and tried to

---

* _Fyavo—is a word meaning honored visitor, but carrying with it the connotation of princely position and power, conferred by the Ho-Ghan's gift of the emerald._—Ed.
send the Phyladian away, but the giant had still refused to go, and he had made violent gestures with his hands, pointing to the guards. When Brewster again asked what the giant was saying, the guard said, “He is grateful also because you saved him from injury at our hands, O Fyavo.”

“Fine. Now tell him to go.”

“He is very dull witted and does not understand that you cannot grant him leave in the Jeggian tongue, O Fyavo.”

Brewster’s enormous Introduction was lying nearby, so he had shrugged and picked it up, opening to the appendix. He read three different phrases aloud, combining them: “O gaby or-tram jhaba miratro O igo; haftgi; O brui mettaz.” “I wish you the very best fortune for the future; I go now; I bid you farewell.”

The Phyladian’s objections had only increased, until Brewster caught one word, then another, then a phrase, tracing them all. Then he had risen and stood before the guard who had done the translating. “Tell me again what he says,” Brewster said in an even voice.

The guard’s brown face blanched. “Your indulgence, Fyavo, for not listening carefully. He says he fears we will kill him when he goes from here. He has seen you are merciful and wishes to remain here as your bondsman. He says his life is yours.”

Brewster slapped the guard across the mouth. “He stays, and I’ll expect to see him every day. If you ever try this on me again, I’ll break you apart.” He pieced together a few reassuring syllables which he spoke to the Phyladian and retired to his room.

And here again Brewster was uncertain about his motives. Why had he bothered about that stupid brute? Was it merely his anger at the guard’s effort to deceive him? He was sure they had meant to kill the giant. And the brute had said his life was Brewster’s. Great. He was getting to be a collector of lives. First Akar, a noble, now this green-headed brute. He remembered suddenly Suba’s saying: “You’d think life was valueless to them, but it isn’t—not their lives.” How true was it? They seemed to have a sliding scale for the value of life, like their tables of rank and law and ethics.

Before he went to bed, he tried to contact his friends. An officer appeared on the Sinju and said he would pass the message to Chorcha, where the Earthmen were expected the next day. Abbott was nowhere to be found. He had lain awake, falling now and then into a shallow, restless slumber, and then suddenly Vrita had appeared. He hadn’t known where she had come from and he asked no questions, taking the silken loveliness of her body in his arms.

SHE was gone when he awoke, and then Rogofsky had called in from Chorcha, saying that he and Stewart were going to Hruthes by spaceship. He had not told them what he felt, and he had avoided it when he saw Joe Abbott later in the day, before he went to see Dr. Stevens. A call came in from Suba Marannes when he was leaving; he didn’t take it. And not because Abbott had just told him there was talk about him and a woman who could only be Suba, but because she had plagued him and given him a bad day the day before.

Not that this day started out much better. His escort was a taciturn medical officer who spoke less than a dozen words all the way to the hospital where Stevens lay. When he took Brewster into the large room, he jerked his head toward the bed and said, “Hopeless. Spinal injuries and shock. Dying slow-
ly." It was a long speech for him.

When Brewster had last seen Stevens almost a year before, Stevens had been a man some fifty years old, with a finely moulded face and keen, intelligent eyes and a firm, vigorous step. The man who lay in bed with jaundiced, tearing eyes still retained some of the cast of Stevens' features, but nothing more. A dozen scars had disfigured him. The hair on the right side of his head had fallen out, the rest was thin and white as snow. His cheekbones were large and prominent in his wasted skull, his hands gnarled and bony and trembling. Though his tear-filled eyes were open, there was no sign of recognition in their vacant yellow pools, nor did he seem to hear the few words Brewster spoke...

When Brewster returned to the palace, he dug into his carton and took out a pack of cigarettes. He emptied the pack and took out the last cigarette. Instead of tobacco it held a rolled up bit of paper.

Don't be a sucker, Brewster. There's more to winning bets than playing the odds—find out what you're betting on. Interested in palace revolutions, maybe? It's a juicy two to one, in the bag, and you lose either way. . . .

He realized then, reading and re-reading it, that he had stored the question of the existence of this note in some far recess of his mind, as he had stored the note itself. Now it was out again and Brewster had no answer. He realized that he had retained some vagrant idea that Stevens had written it . . . maybe, for some reason I will learn, it was Stevens: that was the way he had stored it in his mind. But now he knew it wasn't Stevens.

Then who was there among these people who could write in slang?

He replaced the note in its hiding place, and the questions in a little receptacle in his mind marked: To Be Opened When Akar Returns. So secure and satisfactory a place was it that he smiled when he held his two automatics in his hands. He had not touched them since the second day. He blew the dust off the guns and put them away.

IT WAS as if someone had been watching him. There had been only that one note in five days, but after the fifth day there was a new note every day. He found them in his food, in his bed, once in a half empty pack of cigarettes. Only the first of this new series disturbed him to the extent that he did something about it.

Get it, Brewster? One by one they're gradually going to separate your whole outfit. Let them! Keep your eyes peeled and your mouth shut, and maybe you'll wind up in the bed next to Doc Stevens. Maybe all of you will.

He called on the Sinju and found that all except Rogofsky and Stewart were together in the Nogansi province, and even those two were on their way back. And Abbott called him briefly to inquire what he was doing. Abbott was in work clothes, making metallurgical surveys in the Totamangu mountains, surrounded by troublesome bodyguards.

After that he ignored the notes, even when one of them referred to Vrita, calling her the first self-appointed satellite of the coming star. For all her secrecy and care in meeting him, he knew that soon or later their meetings would become known, but he was angry at this spying. It was not difficult to deliver such notes, he knew. The palace teemed with servants and attendants,
and even the watchfulness of the Argyres and warriors was not enough—that much he knew from their constant nervousness in challenging even casual passersby, from sudden hurried searches he would see conducted at all hours.

He could have stopped it easily enough. Because of Vrita, he had reduced his guards' functions to merely straggling behind him, and there were times when they would wait for him at appointed places far from where he was meeting Vrita. It was an unspoken agreement between them; he made life comfortable for them, and they stayed out of sight if he required it. Thus, Vrita felt at ease in the mysterious role she still kept up and which still intrigued him. Having pushed his guards into the background, he was reluctant to ask them to watch for the note-bearer.

Not that they mattered, except for irking him. The notes had failed in their primary purpose, he knew. Because they had waited until he re-examined the first one, they had probably inferred that he was ripe for their war of nerves. The opposite was true, because he understood their motives. He completely gave up calling the others on the Sinju. He relaxed entirely, forgetting the passage of time so well that he had to consult the calendar he kept to remember.

Afternoons he spent watching the warriors drill or go through complicated maneuvers in spaceships, even in tyars. Evenings he was with Lanoe and officers, dining with them, present at their entertainments. He was invited everywhere in the palace, until he felt he was one of the great number of nobles who had lived there for years. And always adding a welcome element of excitement was his relationship with Vrita, her sudden appearances, her notes marked with a large, flowing symbol which she would not explain. Trying to understand her became his pastime; he had never met her at any of the palace functions, yet she seemed to be in the palace quite frequently.

Suba Marannes called twice and he refused to answer both times, and then he heard no more from her. One night he overheard the name Marannes mentioned by several people, but it stopped when he came closer and he asked no questions. Once Abbott called in and left word from the Nogansi province. Brewster was too busy trying to arrange seeing Vrita to call back. The next day no one in Nogansi could locate Abbott.

So it went on easily, pleasantly, for days . . .

Twelve days after the Earthmen had first landed on Jegga, everything exploded.

The first grey light of dawn was lying on the open terrace when Brewster woke. Because his head was still heavy from the wine he had had the night before, and because the sudden noise in the darkness had startled him, at first he could not understand what Abbott was saying. His eyes focussed slowly on Abbott's form sitting on his bed, and he listened, then suddenly he sat up and turned on his night lamp. Abbott emerged from the gloom, his face grim and hard.

"Do you understand, Nick? Rogofsky and Stewart are dead! The others are scattered all over this planet! I can't find any of them."

Brewster said, thickly: "How do you know?"

Abbott opened a little bag and took out his Introduction book. He had pasted the flyleaf to the inside cover and formed a pocket. From this pocket he took out a handful of small, wrinkled sheets of paper and thrust the papers into Brewster's hand. "I've had a
special courier service for the past few days," he said, grimly.

Brewster knew what they were the moment Abbott took them out. He went through them carefully. They had been written in the same stiff, heavy handwriting that he had found on his own notes. But they were a good deal more specific in what they said. They gave information and had none of the sarcastic lines he had received. One of them read:

*Who are you making these surveys for? Why don't you wait until you find out? Find out what the Jeggites intend doing with the metal you hope to make. If you want to see how heavily they're banking on you, get to a Sinju alone at the 95th hour. Tune in to 80-77-15.*

"This was the first one I got," said Abbott. "I couldn't get to a Sinju right on time. When I dialed it later, a Jeggite came on and asked what I wanted. I said I was fiddling around and stopped trying. The next day I got this long note, telling me what they had wanted to show me on the Sinju."

Brewster took the paper from Abbott's fingers, lifted his brows at the length of the written message. It was the longest of all.

The second note told Abbott that the Jeggites had long before prepared everything needed for the manufacture of metal. They had laid out the sites of mines of every description, needing only the techniques and methods to put them into operation. It listed some ten different places on Jegga, Usau, Darziz and Ania where everything was waiting. It ended by saying that it had cost the lives of hundreds of men to get that list, and that it might cost his to be found holding it.

There was a note similar to one Brewster had received, warning Abbott that they were all being separated, but it went on to say that the reason for this was because the Jeggites feared if they were kept together, they might combine what they were learning and unite against the Jeggites.

"I checked on that one," said Abbott. "I tried to call the men, but all I could get was that they had been in Nogansi. I called you that night but you didn't call back. I went to Nogansi. The men had been there and gone, some to one place, some to another. They had split up in groups of two. Purdom and Callahan, they said, were in Ulatai. I went there and stayed on their trail until I caught up with them in Pingui. They were all right, but they had a lot of women with them and they were having a fine time. I stayed all day with them trying to get them to come back. When they wouldn't, I tried to get to Casia, where I learned Drake and Peters were. On the way there I got this last note."

*Don't bother going to Casia. You're on a wild goose chase. While you're scuttling back and forth, Rogofsky and Stewart are taking a little trip from which they won't return. They were on the Hruthian ship Mowhana yesterday. Better go back and see what's happening to Brewster.*

BREWSTER put the note down and reached for a cigarette. "How do you know Stewart and Rogofsky are dead?" he asked.

"I kept trying to trace them. Finally somebody told me they had taken passage from Hruthes. I checked all their ship lists and saw that the Mowhana hadn't come in to Jegga. They told me the ship had had to turn back to Hruthes. I called Hruthes on their
Tonju*—that ether telegraph of theirs—but they wouldn’t say anything about Stewart or Rogofsky being there. They just said they didn’t know."

"So that made you decide they were dead?"

"Not that alone. I took a tip from you and put on a civilian robe and ducked my guards. That was in Lucansor, where they told me the Mowhana had turned back. I went back to the ship offices and hung about the place. There were crowds there all afternoon, so I knew something was up. Later that day there was an announcement over the Borju that had dozens of people screaming and crying. Then they hung up some kind of announcement. I couldn’t try deciphering it there, so I began to copy it down word for word.

*I The word Tonju, like Sinju and Borju, derive from the same root: Ju, or news. Their uses, however, encompassed a good deal more than that. The Sinju was a colored screen capable of reproducing images in natural color for vast distances, but not through space. At the same time, the images, which could be magnified to any size, depending upon the receiving screen, were accompanied by voice or natural noises. Such natural noises could be toned down or magnified.

The Tonju was more or less what Abbott called it—an ether telegraph. It was used when communication was wanted between planets, or from ship to ship in space. Once through the atmosphere of a planet, it became possible to use the Sinju. The Tonju did not reproduce voices, but only impulses of some electrical nature, working on the principle of light beams and bent by electricity. There were several regular Tonju codes, and the various Jevs each used their own military codes.

The Borju corresponds to Earthly radio. It reproduced voices, and was able to penetrate some distance into space, though it was seldom used for that except in emergencies.

There was also a device called a Sorju, though none of the Earthmen had seen it. This was a device of limited range, combining the uses of the Sinju and Borju—that is, capable of projecting images and voice or natural noises, but able to perform in space. There were not many of these and they chiefly used for warships, where they could, without any receiving operator, by themselves tune in on images in space, and thus were extremely valuable to warships in battle, since even their limited range outdistanced any other form of vision.—Ed.

"I’d just about finished when some Argyres arrested me. They thought I was an Estannar and wanted to know what I was copying the list for. Not that I understood them, or they me, but when I ended up in the Lucansor prison, there were my bodyguards. So they arrested my guards and gave me a new set and I started back to Ho-Tonda. I wouldn’t explain and I still had the stuff I had copied. When I deciphered it with the stuff in my book, I saw it was an announcement that the Mowhana had been lost in space. The rest of it was a list of passengers."

"Did you find Stewart and Rogofsky listed?"

"No, but would they have put their names on it?"

Brewster took a long drag and smiled at Abbott. "Then all you have to go by is this note saying they were on the ship. What makes you believe this note so implicitly? Have you any idea who’s sending these notes to you?"

"It’s not just the note, I tell you! Why can’t I get through to either Rogofsky or Stewart if they’re alive? And since then I haven’t been able to locate any of the others."

"But what about the notes themselves? Any ideas?"

"Yes," said Abbott, evenly. "I don’t know if you’ve noticed, but these notes are written in slangy expressions, and to me that means that there are...." He took a cigarette and waited until he had lit it. "It means that someone in concert with the rebel Estannars knows our language very intimately...."
there were—at least one—but also that they joined the side of the Estannar rebels.”

“Then you knew?”

“Sure I knew. I’ve thought the same thing for days.” His grin widened. “I had my own little courier and my own little notes.”

“Then what do you think it means?”

“Means?” Brewster shrugged expressively. “Just what it is. We have one or more of us playing the rebels’ game. It’s a surprise, sure it is, but there’s a logical answer and we’ll get it.”

Abbott regarded him steadily. “And Rogofsky and Stewart?”

“One gets you five they’re perfectly all right. They’ve just gone off somewhere and these fools are trying to break you down with their notes.”

“And the others? Peters? Callahan? Drake?”

“You left out Purdom. What are you worrying about? You said yourself they were having a whale of a time. It’s just tough to get in touch with them sometimes. I gave up a few days ago,” he added.

Abbott got up, facing the terrace. The sky was beginning to show pale red streaks through its gray-blue. “And the general idea of there being men from the Trailblazer I here on Jegga, siding with the rebels—and our not being told a word of it—all this just means what it seems on the surface and nothing more? It doesn’t make you wonder a little? It doesn’t stir you in any way?”

“Hold on now. In the first place, we don’t know that there are men from the Trailblazer here. I mean, it might just be one man. It might be someone with the kind of intelligence that Mike Callahan has. He might have been taken in by the rebels’ big talk. Or he might even be a prisoner among them, forced to write these notes. As for our not having been told—maybe even the Jeg-

gites didn’t know about it. Or if they did, maybe there’s an excellent reason for their not telling us. I know this is a surprise, a shock, finding it out this way, but there’s no sense letting yourself get carried away by it.”

Abbott seemed to calm down, but after a moment he shook his head and said, “You may be right about some of this, but not about the Mowhana. If they expected to build any sort of confidence in us with these notes, they’d be crazy to say something they knew we’d find out was wrong.”

Brewster grinned again. “Maybe they had other reasons than just building your confidence. Maybe they wanted to get you in certain places at certain times—so they could take a crack at you, for instance?”

“Then why didn’t they? I went.”

“Sure you did, but our Jeggite friends were a little too smart for them.” He laughed at the way Abbott looked at him and got out of bed. “Okay, okay, I know something, and I’m going to spill it. But we might as well have breakfast. I can see I’m not getting back to bed.”

SO, WHILE the dawn gently flooded the sky, Brewster and Abbott sat out on the terrace under brilliant streamers of sunlight, having a breakfast that Brewster ordered by name, dish for dish, grinning at Joe Abbott. He had even concocted a palatable substitute for coffee, and all this, combined with the really serene morning, finally had its effect on Abbott. He listened attentively while Brewster told him everything he knew. Or so he thought, but there were some things Brewster held back. The thing with Vrita, for instance, and his short-lived romance with Suba Marannes, or the killing of his guards.

But he did tell him about the slaugh-
ter of the Argyres, and the assassination of the Ho-Ghan, and the burning of the Marannes quarter, and then everything Suba had told him. He cautioned Abbott very grimly about ever revealing the source of the information which Suba had given him, but he weighed all of it against a lively skepticism. In the end, Abbott was very quiet. He had hardly interrupted, once asking why Brewster had been worried about the men that day when he, Abbott, had left, and the answer that Brewster had known of the planned rebel ambushes had seemingly satisfied him.

Still, when Brewster had finished, Abbott insisted that they try getting in touch with the men. Brewster had gotten dressed and joined him at the Sinju. When he came into the main room of their wing, Abbott had looked at him peculiarly. Brewster was wearing one of several new tunics he had gotten some days before, a handsome tan and green thing, with a jeweled belt.

"You know," Abbott said slowly, "with that heavy suntan and the clothes you're wearing . . . I don't know, maybe it's the way you carry them, but I don't think I could tell you apart from a Jeggite if I didn't know you."

"Comes in handy," Brewster grinned. "You should hear me spill the lingo. Not just ordering dishes, either."

They spent two hours at the Sinju in fruitless efforts to reach any of the men. Official after official appeared on the screen, all of them professing ignorance, all accepting messages for relay. When Brewster saw that it was beginning to wear Abbott down, he took him for a walk through the palace gardens as a native might escort a visitor. He remained cheerful to the last. The last was when Captain Akar came.

"The news that Akar was back reached them in the gardens, and from the very way it was delivered, it smelled of bad news. The messenger who came for them almost lost his life doing it. Evidently he had seen the two Earthmen on one of the upper terraces, and feeling the urgency of his mission, he had forgotten elementary caution and come dashing at the two men. He was one of a score of Hruthians who were searching the grounds for them.

He came running up a flight of stairs, but he was still twenty yards from them when suddenly the otherwise deserted gardens became alive with armed guards who sprang from nowhere. They might have killed the messenger in his tracks if he hadn't been knocked down when he reached the top of the stairs. In a twinkling the guards were swarming all over him, and Brewster and Abbott came running.

Five minutes later they were ushered into a spacious room where Akar awaited them. "Sit down, gentlemen, both of you," he said quietly, but he remained standing. When the attending warriors closed the doors behind them, he stood a few feet away from both men.

"I have distressing tidings for you," he said. "Two of your men, the ones named Sam and Paul, or Rogofsky and Stewart, as you call them, are in the hands of the rebels. They were taken when the ship on which they were returning from Hruthes was attacked and captured by a rebel warship. The few survivors of the attack told us that your men were taken alive. We do not know where they now are."

He paused a moment, then said, "I see that this news is not as much a shock as it might have been. That is why I wanted you both here. I had information which led me to believe that both of you either already knew or expected this news. The rebels seem to have picked you two out as their main targets for the notes they have sent you. They,
as we do, believe in the principle of leadership, and they, again like us, seem to have decided that you two are the leaders of your group.

"I regret that necessity forced me so long to secrecy about matters which I know must have aroused your curiosity. Undoubtedly we were at fault in believing you could be kept in total ignorance until it suited our convenience, for our enemy is, as you know, extremely resourceful. But matters have now come to a pass where you must be told everything, if we are to retain your trust. Since I am uncertain as to what you already know, I will answer whatever questions you put to me."

"All right," said Abbott, "suppose you tell us why the rebels took Rogofsky and Stewart, and what you think they'll do to them."

Brewster said: "No, we'll get to it. I think it would be better to go about this in an orderly way, taking first things first."

Akar nodded. "And first you would ask...

"About the mutiny aboard your ship. Why should some Jeggites have been involved in a deal with rebel Estannars—unless you Jeggites are divided among yourselves?"

Akar remained thoughtful a moment before he answered. "There is some truth in what you say. Not that we Jeggites are divided in our opposition to the rebels, or in our determination to keep our civilization dominant and our Empire intact. But, as always, there are varying opinions as to how any ideal should be preserved and furthered, and these differences of opinion have in the past divided us on the questions of method. You would like a complete answer, I imagine?"

"As complete as possible," said Abbott. "It sounds complicated."

"It is," Akar said, with a slight smile. "Everything, as you know from reading the volumes we presented to you, revolves around the Ho-Ghan. From time immemorial his position, his dynasty, his very person, has been something sacred. The Ho-Ghan combined civil and military law, ruling Jev and Regio alike, but the Ho-Ghan's power was originally a military one. The first Ho-Ghan was a Jev more powerful than the rest, and nothing more, but in time he took on new attributes. In a growing empire someone had to, and so he became the repository of all civil law as well as military law.

"But here a strange thing developed. In time this military ruler attained such power that he was able to appoint Regios and declare that since they represented him, their power was greater than that of the Jev. From time to time the Jevs rose and overthrew the Ho-Ghan. A new one took his place, but inevitably the new Ho-Ghan followed the path of the others. Since only the Lyrio family knew the secret of the forcewall, only Lyrios became Ho-Ghans, and thus, unassailable, they soon, within a generation or two, elevated the Regios above the Jevs. For generations more the Jevs would endure it, busy with conquests, building the Empire, until they too rose, each time hoping that with the exile of this Ho-Ghan they would permanently resume their rightful position.

"It was always a vain hope, and continued so to this day, but in the lines of this struggle we see the lines that have divided all Jeggite power through history. As there was enmity between Regio and Jev, so was there enmity between Argyre and warrior, and this enmity existed through all their relations. Because the warriors were primarily responsible for the subjugation of the Estannars, the Estan-
nars sought power and influence and friends among Regio and Argyre. And found them, for the Estannars are intellectually gifted, and even their rebellious elements have never been enough to stop the rise of loyal Estannars to all sorts of positions of wealth and power.

"In many ways this friendship has benefited the rebels too. We warriors have always felt the subtle hand of the Regios in our dealings with them. Not that they were traitorous, for as I say, no Jeggite is a traitor to his race, but their caution and regard for the Estannars had many times stopped drastic action where only such action could succeed."

Here Akar paused for some reason, but after a moment he went on.

"WE JEGGITS have waited centuries for men from your world to break through to us—and when you came, you arrived at a time when the Jeys were restless. The arrival of your first ship was unexpected, but it presaged the coming of a second. Waiting for that day, every rivalry became more bitter, every question of policy became a major issue. The Jeys ruled Boron with martial law, but the Regio of Estannar wanted to have Argyres take over and be the first to greet you. The Jeys realized, after your arrival and after the Estannars had made an attempt to seize you, that knowledge of your arrival would establish guilt among Estannars if your arrival was kept secret. The Regios refused. It was more important to them that you be received in great style.

"The final outcome of this struggle was in doubt all the time you were on Boron, after we had gotten you back. We didn't know it then, but when word of your arrival reached Jegga, the Ho-Ghan acted swiftly. He executed two of the Jeys who happened to be in the inner city and ended the struggle. The other Jeys gave up, and acting on orders of the Ho-Ghan, made changes in the personnel of all ships. We waited twenty-two hours until word came to proceed. I still knew nothing.

"I left with several new officers aboard. They were Argyres, dressed in our tunics, sent to make certain there was no trickery by the Jeys. As officers they had the run of the ship, and they quickly examined the captive Estannar aboard, eager to discover if there was anything they didn't know. As you know, among other things they found out that the rebel somehow knew of their plot to mutiny and kill me if necessary. But they had also found the notes he had to deliver to you. To bind him to silence, they proved to them that they had delivered his notes for him, and he could not reveal one without revealing the other. It was a difficult choice for them, but the success of their mission depended on it, and they paid the price.

"We later discovered that the Estannars had ships out after us, and this spy hoped a mutiny might play into their hands—or it might result in the death of everyone aboard, which suited him as well."

Akar smiled grimly at the memory and regarded Brewster. "You saved us for the second time then," he continued. "But when we reached Jegga, an Argyre escort came up and Jeg Thyle ordered me to obey them. The Regios had won. But there never was any question of cooperation with the rebels. It was a continuation of the struggle between the Jeys and Regios, or the Jeys and the Ho-Ghan."

Brewster said: "But that same night the Ho-Ghan placed the Jeys over the Regios and elevated the class of Lanae over them as well."
“Ah,” breathed Akar, “but that was not the same Ho-Ghan—and for that we have you to thank. That was the third time you saved us.”

“Me to thank?”

“Yes, for had you obeyed the wishes of the Ho-Ghan and appeared at his reception that afternoon, it would have been over. We were too disorganized to attempt anything then. Your refusal gave us several hours of grace, hours during which the assembled Regios and high Argyres tried to calm the Ho-Ghan. He was in a wild rage at your insolence. He blamed the Regios for the great public reception they had given you, saying it had given you too great a sense of your importance. He finally threw them all out, in a tantrum all that afternoon.

“THAT was our chance. We brought in thousands of our warriors. When the reception started, the Ho-Ghan was already on his way to exile at a secret destination. The Jews made the Ho-Ghan’s brother the new Ho-Ghan, and he issued the new laws elevating the Jews and Lanae. The Regios were ready to believe anything at the time, and by the time they manifested doubt, the Jews already ruled the inner city. They were ready to use force against the Regios themselves, as they had on the Argyres.

“So the Regios gave in. Since then they have tried to see the Ho-Ghan but the Jews have refused, and the Ho-Ghan sends out word that he will not see them. Meanwhile the vast armies of the Regios are being disbanded, and edict after edict cuts their power. The secret of the Ho-Ghan’s overthrow will be kept until it is safe to reveal it. Less than a hundred people know that the Ho-Ghan who received you that night was a new Ho-Ghan.”

Brewster nodded to indicate his satisfaction with the answer, but more for Abbott than Akar. To forestall the possibility of Abbott pursuing the subject of the Ho-Ghan’s exile—for Brewster had told him of the assassination—Brewster quickly said: “Suppose you tell us what happened to Rogofsky and Stewart?”

“I have already told you what I know.”

“I mean about the notes Abbott and I have been receiving.” He added, very casually, “Why didn’t you tell us that there were other survivors from the first ship besides Dr. Stevens?”

Akar didn’t move a muscle. “There was an excellent chance that we might rescue them from the Estannars. I had hoped to return with at least one of them. To have told you beforehand might have further confused an already bad situation.”

“How do you mean rescue them?” said Abbott.

“I think I am using the correct term. You see your contact with them, brief as it was, still breeds doubt in your minds. They can be very convincing. I say rescue because it hardly seems likely they went willingly with the rebels. They had been on Jegg less than three weeks when they were taken, most of that time in a hospital.”

“How many of them are there?” said Brewster.

“Suppose I tell you the whole story,” said Akar, watching Brewster light a cigarette. “You’ll have to teach me to do that sooner or later,” he smiled. Then he resumed: “There were six survivors from the crash. Two men died on Boron the first day, but their bodies were stolen by the Borons. The others were taken to Jegg. Dr. Stevens steadily deteriorated in spite of everything we could do, but the other three, Harper, Crane and Burke, recovered under our care.”
"Possibly all three are still alive. All we know is that one day there was a magnificently co-ordinated rebel raid and they were all taken. Dr. Stevens was in the hospital, and was thus saved. We turned the System over without finding a trace of the three men. We never again heard anything of them. Until the day you landed on Jegga, it was thought the Estannars might have killed them.

"Our first information that at least one of them was still alive came from that Estannar we brought back from Boron in my ship. Expert questioning brought out an amazing number of things, among them the fact that the Estannars were bringing one of the three to Jegga. We also learned that there were already dangerous agents called Konos in Ho-Tonda itself, hidden in the Marannes quarter."

"And that's why you burned the quarter down?" said Brewster.

"As soon as we knew. The Konos are trained killers, and it could only mean that they were going to make an attempt on your lives. To decrease the danger, we removed most of your men from Ho-Tonda, inviting them on a tour of our cities and provinces, and putting small armies of bodyguards around all of you. Then Argyres discovered that the rebels were following the tour, and in one instance at least, the Estannar espionage was so good that they anticipated a visit to the city of Chorcha itself.

"By that time it was too late to stop Rogofsky and Stewart from their journey to Hruthes, but on their return trip we sent an escort of two squadrons of warships. We still have not received all the details of the attack the rebels made, but it was a characteristically excellent one, planned and executed to perfection. It became apparent that the rebels were expending their full resources in their efforts to get you.

"We didn't want to alarm your men, but the danger of a successful raid was too great. To minimize the danger of losing them all in one huge attack, we encouraged them to keep separating and kept their whereabouts a secret even from both of you, for the enemy might have been listening at any time. But from the way Mr. Abbott here began trailing first one group, then another, we surmised that the rebels had found a means of alarming him.

"We followed Mr. Abbott everywhere, intercepting all the notes the rebels sent him from Ulatai on, but letting him receive them to encourage the rebels to send more. We knew we could disprove what they told him, and it was imperative to try finding the man who wrote them. For we then knew that one of the three was on Jegga, and that he was writing these notes. I imagine you guessed there were survivors in the same way?"

Brewster nodded. "From the kind of expressions we found in the notes. It was what we call a dead giveaway. But you didn't get him?"

"No. We caught four messengers, but they knew nothing. We knew the other men weren't being sent these notes, but we were sure you must have gotten some, Mr. Brewster. We tried to find out, but our men here said you wouldn't even let your own guards near you half the time, and it was impossible to know."

"Oh, I got them, all right," Brewster grinned. He unbuckled the belt he was wearing and took out a small roll of papers. "I got the first one the first night we were here. A Hruthian porter just walked in and handed it to me. Ten minutes later we passed that porter in the corridor. The Argyres were carrying him on a slab, dead."
AKAR'S jaw tightened. Half to himself, he said softly, "Then that was how the Argyres found out there were rebel cells on Jegga. The first clue must have come from that porter, and they killed him after he told them to keep us from finding out. You see," he added, turning to the two men, "the struggle between the Argyres and us affected even your safety sometimes. Both factions were jealous of the privilege of safeguarding you."

Brewster drawled: "I don't care who saved us, as long as somebody did. And a pretty fair job, too, from what I've heard." He tossed the roll of papers to Akar. "Some of these notes get pretty personal, if you'll notice."

Akar quickly ran through the notes. Once he observed, "We could never duplicate this use of your language. We learned it chiefly from your men while they were here, and from the many books we were able to save from their ship. But the rebel Estanners learn it from these men and pass it on, and one of the ways we trap rebels of other races is by finding out that they speak your language but cannot honestly tell us where they learned it."

Abbott asked, "Then there are other rebels besides Estanners?"

Akar looked up at him. "Not many," he said. One of the notes seemed to make him pause. "This reference to a woman called Vrita," he said presently. "Is she a very beautiful woman? A Jeggian? With large eyes and braided hair? Quite a beautiful woman?"

"It sounds like her," said Brewster. "You seem to know her."

"I do know her, slightly," said Akar. He rose from his chair, and it seemed to Brewster that he had put on what Brewster thought of as his impassive expression, not an expression at all, but the too careful avoidance of any expression. "Well, tell me about her," he pursued. "I hardly know a thing about her. She's a complete mystery to me."

"Another time, perhaps. I must go now. We still have ships out searching for your friends. Perhaps something has happened."

Abbott said: "You don't seem to think there's much hope."

"It would be foolish to hope. We have had extraordinary success against the rebels in the time that you have been here, and yet we have failed. Not only have we lost two of your men, but we have been unable to find one of the three they took away a year ago. And the danger is still as great as it ever was, if it has not increased."

"I had no idea the rebels were so powerful," said Abbott. "That is our fault. We seldom underestimate them, but we did not wish to alarm you as long as the situation was under control. Not that we are unduly alarmed even now; we have been their masters for too long not to know how to handle them eventually. As for your other men, you can look forward to their return shortly. The inner city is quite impregnable, and Jegga will be cleared of the rebels in due time."

BREWSTER and Abbott rose to go, but Brewster stopped halfway across the room and turned back to Akar. "By the way," he said slowly, "if you don't want to continue underestimating your Estanners, you might do worse than have a conversation with Suba Marannes."

Akar nodded imperceptibly. "Thank you," he said, quietly. "You evidently do not know that she left Jegga for Estannar several days ago. It is to be hoped that her welcome on Estannar will be warm indeed. We had quite the same idea, but your frankness and
trust in us will not be forgotten. Our debt to you grows daily." And he
touched his forehead in formal salute...

Abbott waited until he was alone with Brewster before he spoke. He
might have said anything then if Brewster hadn't quietly asked, "Well, Joe,
are you satisfied?"

Abbott turned on him, his eyes blazing, his voice filled with scorn. "What
do you mean am I satisfied?" he ground out. "You're the one who ought to
be satisfied! You deliberately turned that girl over to them! You told me
to be careful about revealing anything she had told you and then you turn
around and dump her into their—"

"But you don't understand—"

"I understand only too damn well! That Vrita, whoever she is—that's the
reason! You've got your hands so full with one woman that you can afford
to sacrifice another for the sake of a lousy gesture! For a compliment and
a salute you turn spy for them!"

"Not at all," said Brewster evenly. "These people are our friends. The
rebels are our enemies. It's as simple as that."

"Is it?" said Abbott, his voice growing very quiet. "Are you so sure it's as
simple as that?" He looked at Brewster and there was an odd light in his eyes.
"Yes," he said, quietly. "You've made your decision at last. You've picked
your team."

"And you?"

Abbott didn't answer, and for a long
time the silence lay in the room, heavy
and oppressive. When finally the Hru-
thian girls brought in the mid-day meal,
Abbott walked out and left Brewster
alone. Brewster, however, did ample
justice to the excellent food, and later
he whistled a tune as he stood on the
balcony, smoking and watching several
platoons of warriors go through drill
on a nearby field.

CHAPTER VIII

A

N HOUR or so later when Brew-

ster left the balcony, he found
Abbott sitting alone before the Sinju.
The shades were drawn against the
warm afternoon sun and the great
central room was cool and dark and
faintly astir with the sounds that ac-
accompanied the projections on the large
Sinju-screen. Brewster sank down on
the couch beside Abbott and looked on
as Abbott took the controls.

The green hills of Jegga kept re-ap-
pearing and blurring as the Sinju tried
to bring them into detailed focus. Again
and again the Sinju circled the hills and
tried to close in from a new vantage
point but always the image blurred.

"What are you looking for?" Brew-

ster asked.

Abbott gave no sign that he had heard
Brewster, and under his direction the
screen blotted out and then came to life
again high above a canalport that
Brewster recognized as Kardandan. Far
below moved many small boats and
barges and lines of squat vehicles ran
swiftly along single rails that fed into the
port from the hills in the distance.
The Sinju went along the canal for miles
until it came to a great concentration
of the boats that moved to it from Kar-
dandan. Along the canal shore at this
point there seemed to be a harbor, but
here again, when the Sinju descended
for closer focus the screen lost the
image.

Brewster grunted and was about to
speak when, from across the room, a
voice called, "The Fyavo Brewster."

Brewster got up and saw two warrior
officers standing under one of the arched
entrances. Seeing him, the officers
came forward and met Brewster halfway
and one of them handed Brewster
a black scroll. Brewster broke the hex-
agonal seal, opened the scroll and stud-
ied the large red letters. He frowned, then nodded to the officers and said, “O igi miratro,” to them and walked to his room.

He was dressing in his red and green ceremonial robe when Abbott came in. “Where are you going, Nick?” Abbott asked quietly.

“The council of Jevs wants to see me.”

Abbott looked down at the scroll that lay on the bed and observed, “You really do speak their language, don’t you?”

“When in Rome,” said Brewster. He put on a broad green belt.

“Nick, you know what I was looking for on the Sinju.”

“Yes?”

“I saw you did. That’s why I didn’t answer. You think you’re the only one who knows what’s doing here.”

“All right, I’m not.”

Abbott studied him, then said, “I saw a lot in the Totamangu mountains. The Jeggites have been mining ore and transporting it to Kardandan and then up the canals. They censor the Sinju from coming too close but it’s evident they’ve got everything ready to start manufacturing steel and every other metal they need—if someone who knows enough to fill in the gaps will show them.”

Brewster put his feet into green sandals and picked up the scroll and started out of the room. He turned at the door and said, “I’m way ahead of you, Joe,” and went out.

In the central chamber he joined the officers. In the corridor they picked up a guard of some fifty warriors and together left the wing and started for the council-room of the Jevs. Halfway there, from the direction of their steady ascent, Brewster knew that the council-room would prove to be the great columned bowl where twelve days before Suba Marannes had led him to witness the assassination of the Ho-Ghan Lyrio.

When they reached the tower, Brewster was led into a lower story as huge as the bowl above it. In the darkness of this empty chamber the roots of columns which ascended through the floor to the bowl were alive with a strange glow. The floor was marked with various glowing symbols and to one of these, a circle in the center of the room, the officers led Brewster.

The moment Brewster stepped on the circle, it detached itself from the floor and began to raise him. Simultaneously, a similar circle appeared in the ceiling above, sliding open to allow sunlight to pour into the gloomy chamber. A moment more and Brewster had been lifted up through this second circle to find himself standing on the floor in the center of the bowl.

But he was also enclosed within the loose center of a great pentagonal table around which sat the five Jevs. Each facet of the table was perhaps twenty feet long and a Jev sat alone at one of these facets, the surface of which was marked with his oriflamme. Standing there, Brewster could not face more than three of the Jevs at any one time, and he turned slowly until he had seen them all.

The Jevs regarded him impassively. Overhead the afternoon sun shone down on the alabaster columns and the black-gleaming floor, its rays like fire in the jeweled symbols and the wind ran through the open bowl and fluttered the red ceremonial robes.

Still no one spoke. Then the white columns that rose forty feet to the sky turned a pale crimson and opened and a host of officials came out of them and took their places around the Jevs. Now, though they still seemed to be ignoring
Brewster, the officials began to talk to one another in low tones, consulting with the jews from time to time, and the bowl was filled with the sounds of their voices.

Brewster took out a cigarette and lit it, his lips tight, a thin scowl on his face. When he blew out smoke, every eye was on him and a deep hush descended, magnifying the loudness with which Brewster said in an irritated voice: "Well?"

The silence became meaningful.

Presently the Lord of the Flaming Stone, Jev Thyle, said, "We have summoned you here to discuss with you some way of returning you to your world of Kren." There was no emotion on his aged, granitic face. "We know you would like to return. Is that not so?"

Brewster started to say, "I'm not—" when one of the officials, evidently for the benefit of the attentive Jev Nastrond, began to speak in Jeggian, and Brewster knew he was translating what Thyle had said. At the conclusion, the official nodded to Brewster.

Brewster said, "Eventually, but neither I nor, as far as I know, any of my friends feel any great urgency."

Behind Brewster, Jev Ahriman asked, "Why?"

Brewster turned to him. "Your hospitality, among other things. Jegga is quite a wonderful world, and we have scarcely begun to see it."

Jev Thyle said, "But you will wish to return eventually?"

Brewster turned again and said, "Of course."

At this there was a new flurry of discussion among the officials and Nastrond, oldest of the jews, a rather sleepy and somewhat feeble old man, nodded stonily as the translator summed up the exchange for him. Finally Jev Eblis, he of the red rocket streak, spoke up. "You are aware, Fyavo, that we know little of metals and that if a vessel capable of returning you to Kren is to be built, you men of Kren will have to teach our smiths your metal-science?"

Brewster half-turned to him and said in a louder voice, "Possibly, I said. There's more than one way of looking at it."

Thyle said moodily, "Cease your riddles, Fyavo." He waved an imperious bejeweled hand. "Will you teach our smiths or not? Answer forthrightly and at once!"

Brewster's scowl lay undisturbed. He took a thoughtful drag on his cigarette and blew out smoke slowly, then pointed his cigarette at Thyle and said, "Will you give me your flaming stone?"

Ahriman shouted, "Remember your position here!"

Brewster spun around and said in a level tone, "I intend to—as soon as I've established it." He stared at Ahriman and the young Jev paled with a rage that turned the scar across his cheek to a livid line. Before Ahriman could speak, Brewster jabbed his cigarette at him and said of the blue-black many-eyed Anzus on Ahriman's robe, "Give me that creature of yours with the eyes!" and turning on his heel he said to Eblis, "And your rocket!" and to Nastrond, "And your green heat!" and to Azevedo, "And your navigation board!"

In the ensuing silence Brewster addressed Thyle again. "Have I made myself sufficiently clear, mighty Jev?"

Jev Eblis got up. In one of his hands he held a small red ball. He opened his palm and let the ball drop to the table. It rolled along the smooth black surface until it fell off to the black floor
where it smashed into a hundred fragments. Without a word Eblis turned and walked across the open chamber down a flight of stairs. His expression had never altered from its impassive cast, but there was dismay on the faces of the group of officials who followed him out.

Thyle sat with both hands flat on the table before him, his eyes searching Brewster's lean, hard face. Azevedo watched Thyle and Nastrond was still looking at the red fragments like rubies on the floor. But Ahriman too had risen and in his hand he held a red ball. His voice came softly and venomously.

"The Fyavo would be a Jev?"

Brewster nodded reflectively.

Ahriman raised his hand furiously and flung the red ball to the floor at Brewster's feet and several of the shattered particles fell on Brewster's sandals. Brewster's dull-gleaming eyes traveled from Ahriman to the sandals and back to Ahriman and his lips parted to show his teeth in a wolfish, mirthless grin. He exhaled smoke and turned his back on Ahriman and faced the other three Jevs.

Thyle had not stirred and now Loth Nastrond and Azevedo regarded him as if waiting to follow his lead. In the hands of each Brewster saw one of the red balls. Finally Thyle spoke, his gruff voice still calm.

"You believe your knowledge is worth so much to us?"

"Isn't it?"

Thyle's cruel eyes blinked. "Why should it be?"

"I don't know, but this is one way to find out if it is."

"Then you believe what the Estanners told you?"

Brewster shook his head. "No," he said and smiled a little and added, "Is it strange that I should try to sell my knowledge dearly?"

Thyle's lips moved before he spoke. "Not unless your price is so high that purchase becomes impossible." He paused. "Once you give us your knowledge," he asked, "what assurance have you that the power so easily won will not more easily be taken away?"

Brewster sighed and said, almost pleasantly, "I thought I'd give you that problem," and smiled again. "I felt you could work out suitable guarantees if you wanted to strike a bargain."

Again Ahriman broke in, but now he spoke Jeggian and addressed Thyle in a contemptuous tirade. Brewster moved back in the circle to avoid standing along the diametrical line between the Jevs and leaned against the table. Though Ahriman's flood of language was beyond Brewster's ability to understand, there was an element of bitter hostility between these two Jevs that was self-evident.

AS THE younger Jev poured out his acrimony, Thyle made no answer nor any effort to interrupt. He stared stonily at Ahriman, his aging features dull with controlled anger and at length, when Ahriman stopped speaking, Thyle rose from his massive chair. Nastrond and Azevedo rose with him. For a moment it appeared as if Thyle would speak to Ahriman, who seemed to be expecting an answer. Instead Thyle ignored him entirely and turned to Brewster.

"Fyavo, know that in the Empire of Jegga power is not won by bargaining. Think a little longer and weigh your conclusions carefully. We will send for you again."

Then he left the table and walked quickly across the black floor to the stairs, Nastrond and Azevedo following and behind them their coteries of officials. But Ahriman was the last to go, remaining even after Brewster
vaulted the table and walked out. He could almost feel the hatred that followed him, not only in Ahriman’s eyes, but in the eyes of the jeweled representation of the Anzus he wore, as if it were alive.

Brewster couldn’t understand it....

* * *

For the first time since his arrival in Ho-Tonda, Brewster felt a weariness that was more than ennui. It was not a physical sensation, but it expressed itself in a restlessness that almost wore him out. For the first time he felt the weight of passing hours... and something missing... something he couldn’t quite touch.

Abbott was gone again when Brewster returned from the council of Jevs. There was no sign of Akar, nor could he be reached through the offices of the Lanae of the palace, who should have known. Brewster sat at the Sinju and tried to locate Drake and Matt Peters, but their trail ended in Casia, as Abbott had told him. Glenn Purdom and Bucky Callahan had vanished shortly after reaching Pingui.

At twilight, Brewster sat down alone to dinner, but couldn’t eat and gave up. He stood on the balcony wondering what it was that had taken possession of him. It was not loneliness, for Brewster had never felt the need of another human, but at the same time he had a sense of isolation, of being cut off from the main stream. He stood there and watched the lights come on all through the Inner City. He clutched the balcony rail with a tightness that numbed his hands, staring into a twilight as gray as the civilian tunic he had put on. The image kept turning over in his mind. To lose himself in that twilight as grey as the civilian tunic he had in the doing... without thinking, without plan....

Silently he climbed over the rail and dropped to the terrace fifteen feet below. He walked swiftly down a flight of stairs, through a landscaped plaza, and now he was running from the sounds of voices and music that were everywhere in the palace. He leaped across a shallow pond and came to another rail and dropped down again until he was on the lowest level.

Before one of the Palace wings he found an area filled with waiting tyars, their drivers lounging nearby in an arbor. He got into one and began to fumble with the controls, trying to remember what he had noticed of the operation of the simple mechanism. He had switched on the murmurous motor and unfolded the helicopter wings when one of the drivers ran out of the arbor toward the tyar.

The driver reached the tyar just as the blades began to revolve. He reached a hand in, crying out something, and tried to touch the motor switch. With a sudden burst of inexplicable anger, Brewster smashed a fist into the driver’s face and knocked him down. Then he got out of the tyar and waited for the driver to get up, his knotted muscles trembling with eagerness to hit the Darzizt again. But the driver lay there afraid to move and Brewster got into the tyar.

Playing with the controls, he got it off the ground, lowered it again—for nothing was allowed to fly within the Inner City—and drove it to one of the roads. Speeding along, he was soon through the guarded walls and in Ho-Tonda itself. Here he went aloft and headed the tyar toward the dark fastness of Paipurth mountains.

He knew that his sudden, successful disappearance would mean the lives of his bodyguards, but somehow it had stopped mattering to him. A strange fever was running through him.
ONLY when he was almost there did
Nick Brewster realize that he had
gone to Vrita’s lodge, and then he saw
that he might never have found it if
there had not been lights on within. Not
many lights—one or two, perhaps, but
in the nightbound forest they were
lonely beacons.

Then Vrita was there. For once
their meeting would not be her doing,
the result of a note, tender or curt,
coy or demanding. He felt his pulse
quicken as he maneuvered the tyar into
a soft, gentle landing in a clearing near
the lodge. Then he walked the slope
of the hill, trying to decide how he
would make his entrance.

The lodge was a medium-sized house
with two main rooms comprising the
lower story and four in the upper. It
was made of rough green plastic and
stone and wood, a rustic house but one
which bore evidence of its owner’s
great wealth from the skill and warm
charm of its architecture to its furnish-
ings. Its rugs and couches and cur-
tains were all bright, lovely things, its
lamps soft and cheerful. Perhaps it
was this almost alive warmth of the
lodge itself that had drawn Brewster
there as much as its associations.

When Brewster reached the low-
based veranda he saw that a single lamp
was lit within. The front of the lodge
was set with a great oval window. By
day its curtains were parted to allow a
view of the enveloping woods but at
night they were drawn to keep light
from showing. Now they were only
partly drawn, which explained the light
Brewster had seen from miles away.
But when he looked in through the
window there was no one to be seen in
the dimly lighted room.

The door slid open at his touch, but
without his finding it necessary to ar-
range the symbols on the lock as Vrita
had taught him. He went inside and
the door closed behind him. From
where he stood, in a sort of foyer that
was also the connecting gallery between
the two main rooms, he could see that
both were empty. Or, if there was any-
one in the lower story, they were in
the second, dark room.

Brewster called, “Vrita!”
Silence. Once again he called, and
suddenly something happened.

He didn’t know why he had done it,
but he found his hands tearing at his
chest, gripping his tunic. It was as
if his hands were looking for some-
thing, searching frantically—but his brain
didn’t know what his hands wanted.

“Selon tikkia o jon trucam . . . selon
trucam . . . trucam . . .”

It was like a voice, his own voice,
whispering in his ear, telling him to do
something he didn’t understand. Over
and over he heard the strange Jeggi
words. His hands grew wilder in their
fruitless search and his head was filled
with the irresistible words and he felt
unable to move from where he stood.
And now swiftly the turmoil in his brain
increased.

He bowed his head and concentrated
the remnants of his will on moving
away from where he stood, as if from
some dim realization that he had to.
Slowly, agonizingly, he advanced first
one foot, then another, and began a
labored walk toward the room with the
light. Sweat stood in huge droplets on
his face and his eyes were half closed
with pain. He watched his legs mov-
ing slowly, so slowly, as if they and
their movement were part of a dream.

But when he had taken the first step,
the second was easier, and the third cor-
respondingly easier, until little by little,
some of the pain was lost and his head
cleared a little. But still the voice in
his inner mind repeated the strange
words, and still his hands worked.

Step by step he left the foyer and
walked toward the light, and then he was able to raise his head and gulp in a long grateful breath of air. His mouth was dry, his pulse hammered in his veins, but his brain was becoming his own again. And now suddenly he became aware—but only by its growing weaker—of an odor so insidious and yet so overwhelming that its presence had been unnoticed until now. So completely and immediately had his olfactory sense been saturated that the odor was indistinguishable until it weakened.

“Selon tikka o jon trucam . . . trucam . . . trucam . . . trucam . . .”

Fainter and fainter now with distance, but still there. He sank down on a couch exhausted, feeling that he had won some terrible fight . . . or its first round, for it was not over yet. But now he could think and his mind was gripping the edges of the mystery, examining it. There was an unseen presence in this house. He lay back, getting his breath and waiting for strength to return to him, for enough confidence in his will to overcome the whispering influence.

After a little while he got up, his face set in grim hard lines, and started slowly back to the foyer. And the voice and the odor grew more powerful again, increasing in direct ratio with his advance back to the foyer. He stopped and drew back, then suddenly ran into the foyer and ran out again. When he returned to the room with the light he fell to the floor before he could reach the couch, holding his head, and a low moan escaped him.

Again he waited and got up. He stared into the foyer, gathered himself and with a quick lunge dashed through the foyer into the adjoining dark room. With the same movement his hand brushed a light-switch on the wall. A soft amber light suffused the room and Brewster carried out in pain and hurled himself across the room to a small object he saw on the floor.

It was a cone-shaped glistening mass of substance, some two feet wide at its irregularly circular base and two feet high. Three large indigo eyes studded the apex of its cone, unwinking eyes with evil black pupils, staring at Brewster with horrible intensity.

It was on this creature—an Anzus, as Brewster had realized—that he hurled himself, his fingers tearing into its jelly-like flesh. He fought it without thinking, without knowing what he was doing. He had made his plan of action before he entered the mind-paralyzing sphere of its influence. His brain was twisted by cruel, invisible fingers and he wept aloud with pain. He had succeeded in sinking his hands into the Anzus and now the terrible energy that had been driven to random searching movements was redirected to the struggle.

His hands, imbedded in the viscous substance to his wrists, felt as if they were immersed in hot oil. But he was as senseless to pain as to everything else now and he lay on the floor, crying and kicking out violently, clutching at the Anzus eyes. His seared palms closed around one and he tore it out and flung it across the room, and then he ripped the second eye out. He could not budge the small fleshy body but now he withdrew both hands and closed them around the third eye and pulled it out with a great backward lunge of his body.

Suddenly a great stillness came over everything. He lay on his back, his arms flung out, feeling the waves of pain in his hands. But he could think again and he knew he had won and he lay there breathing in great gasps, his eyes closed in utter exhaustion.

Though he heard someone enter the
lodge and heard, distantly, a voice cry out, he could do nothing. He continued to lay there, hearing the footsteps recede and then come back, and he felt someone lifting his hands and the pain leaving.

Then he opened his eyes and saw Vrita on her knees beside him.

"Nick," she was saying softly, fearfully, over and over. "Nick, speak to me," and her hands moving over his tenderly. "Nick, Nick . . ."

"It's all right . . . now," Brewster whispered. "It's . . . fine . . ."

Vrita continued bathing his hands in the dark fluid she had brought in a vessel, looking at him. She was dressed in the red and black striped robe of the high warrior nobility. Her long black hair hung down over her shoulders in wild disorder and her olive skin was deeply flushed. Her black eyes were fixed on him.

SLOWLY, Brewster's strength returned and his hands felt soothed. After what seemed to him an interminable time, he tried to sit up and succeeded with Vrita's help. He leaned against her for a few moments as he looked at the remains of the Anzus. The conic form had collapsed to a shapeless oozing mass, its three eyes scattered around the room, dead and lustreless. What little odor of the Anzus persisted was a faintly oppressive perfume. A long weary sigh escaped Brewster.

Vrita asked softly, "What happened?"

He told her, but he remembered only the word trucam. It seemed to be enough for her, for she repeated the five words in proper order. The expression on her face was one Brewster had never seen there before, a sort of calm, deeply intelligent, directed fury that reminded him of the way Ahriman had looked at him. Because of this Brewster began to speak of Ahriman, but Vrita quietly interrupted him.

"I know everything that happened at the council today."

Brewster studied her and when she remained silent he said, getting up slowly, "What I meant to say was that Ahriman—assuming the Anzus is his?—couldn't have known I was coming here because I came here on the sheerest impulse." He paused, looking down at her, then added, "And even that's assuming he'd know about my coming here."

She looked up at him quickly. "The Anzus was not meant for you."

Brewster said in an interested voice, "No?"

But her eyes were distant again and she seemed lost in thought. Presently she started to get up from the floor and Brewster helped her. He took her face in his palms and captured her eyes.

"Don't you think you ought to tell me, Vrita?"

She asked huskily, "Tell you what?"

"Everything. I surprised you here tonight and find you wearing the robe of nobility. And you tell me you know about the council and that the Anzus wasn't meant for me . . . ."

He thought he detected relief in her manner but he couldn't be sure. He dropped his hands and waited for her to speak.

"Of course," she said. "I obviously meant to tell you or I would not have said what I did."

She had left a large drawbag lying on the floor at her feet and now as she made a motion to get it, Brewster stooped to pick it up for her. With a sudden deft motion her hand was under his and she retrieved the black velvety bag herself. Brewster could not help the surprise in his eyes as they rose together.
She stepped back a few feet and drew apart the silk thongs of the bag’s mouth. From it she drew out a roughly corrugated case of some strange black substance, fashioned in a crude oval the large diameter of which was perhaps three inches. Her body seemed to tense and she stared at the case for a long moment, holding it in a cupped palm, her hand extended before her. Her eyes, clouded now, flashed to Brewster and back to the case. Her breathing was shallow and audible.

Then she dropped the drawbag and brought her free hand up to touch the top of the case. It swung open slowly. The atmosphere around the interior of the case sparkled with topaz brilliance, shimmering as if from a great heat emanating from a large, blue-veined yellow stone. Brewster could not determine its shape beyond guessing it was a spheroid because its outlines were blurred and vibrating with an incredibly swift ictus.

STARING at the stone, Vrita walked—her movement was more a long swift glide—to the decomposing Anzus and bent over it. She put four fingertips to the stone, not touching it, and four slender amber flames came to life on her fingers. Lightly she waved her hand over the Anzus and the flames leaped—like tiny, airy dancers of living flame—to the Anzus. They had barely touched it when three of the flames rose slowly into the air and moved, one each, to each of the three eyes of the Anzus, floating through the air in a straight line to their quarry. They burned for no more than an instant, then returned to Vrita’s fingers and she held them over the stone and they were gone. No sign nor vestige of the Anzus remained.

Then Vrita closed the case, picked up the drawbag and carefully deposited the case in it. She walked back to Brewster, her eyes gleaming in triumph and looked at him. He had not moved and his face was ghastly pale even in the amber light.

“You wonder at the stone?” she asked quietly and shook her head. “The wonder is you—that you fought an Anzus and stand here alive and possessor of your reason.”

Brewster looked down at his hands. The palms were wrinkled and dry but there was no pain. “What was that Anzus here for?” he asked.

She waited until Brewster’s eyes lifted to her.

“Ahriman decided to kill Thyle,” she said slowly. “Today after the council meeting when Thyle would not force your obedience, Ahriman was helpless. Before you came to Jegga the Ho-Ghan executed the Jes Nastrond and Azevedo; the ones who bear the name today are their successors. They look to Thyle for guidance and as long as the three stood together, Ahriman could not have his way.”

“His way?”

“To put you to torture, if necessary.”

Brewster shrugged. “How can they, when I have the protection of the Ho-Ghan himself?”

She was silent for a moment, then said, “I thought you understood there is no protection in Jegga except one’s own might.” Softly she added, “It was one of your most admirable qualities—you, a Krennian, to be so much like our ideals.”

Brewster grunted, struck by her words yet trying to get at an undercurrent. From the beginning, from the night he had seen the Ho-Ghan assassinated, he had played the game steadily, keeping his knowledge to himself except for Joe Abbott—and he had more than once regretted the impulse that had prompted him to confide even
in Abbott. What it was he didn’t know, but always there were hints and suggestions and half-formed ideas in his mind that told him there was a much greater importance to the event than even Suba Marannes had mentioned.

Now as he thought of it, his earlier melancholy returned and, as it mingled with his weariness and confusion, it resulted in a sullen and growing—though still hidden—pointless anger.

“Go on,” he said.

She nodded. “The words selon tikka o jon trucam are part of an ancient ritual for those of dead nobility who have died by their own hand. The Anzus was placed here to waylay and compel such an action—”

“You mean the Anzus actually hypnotized me though I couldn’t understand the words?” He looked at her. “Do you know what I mean? Do you know what the word hypnotize means?”

“Exactly. Our identical word for it is the word Anzus, which means: another’s thought. The words were only words, but the thought impulses applied to you just as well. The movements of your hands you spoke of—you could not resist them. You kept searching the tunic on your chest for something that was not there.” She paused. “But suppose that something had been there? You would not have had time to recover, to think, to be able to fight the Anzus. You would never have known an Anzus was there at all, and death would have come quickly. As it was, a less strongly willed person would have lost his sanity—”

He interrupted, frowning. “You said the Anzus wasn’t meant for me, so you must know for whom it was meant—someone who wore something on his chest capable of killing him . . . .”

She met his gaze and nodded. “But I’ve already told you it was here to kill Thyle, and only Ahriman could have placed it here.”

“Here? Thyle here?” Brewster asked, puzzled. “Why should Ahriman expect to find Thyle here?”

“Because Thyle came here tonight. I was Thyle’s wife.”

Brewster took the blow without a sign. After a moment he let his breath out and said, “Past tense?”

She spoke the words softly: “By half an hour. I killed Thyle a little while ago. He had found out about us. It was your life or his.”

Brewster’s eyes blazed. Through tight lips he said, “Did you consider I might have preferred something to save my life myself without resorting to murder?”

A surprised look crossed her face. “Do you object to murder? Don’t talk like a fool, Nick. You would have been dead by morning.”

“Maybe and maybe not. But if what you said about Nastrond and Azevedo depending on Thyle is true, then you’ve practically delivered me to Ahriman and I’m no better off—”

But seeing the shocked look in her eyes as she stared past him, he had broken off and whirled around to find himself standing ten feet from the Jev Ahriman who had silently entered the foyer. Tall and overbearing, his black robe whipped around his shoulders, features twisted in an evil smile, he surveyed Vrita and Brewster.

“Tell him the truth, my darling,” he mocked. “These Krennians, these precious Aaxians of ours, have a high regard for the truth, so let him know you planned to deliver him to me.” His smile grew bitterly contorted. “But I did you an injustice, my darling. I did not realize how great the cost was to you—not only Thyle, but him. Not for the sake of our own—”

As Vrita’s hands fumbled with the
opening of the drawbag, Ahriman took three swift steps forward and struck the bag from her hands and with a smashing blow knocked her to the floor. But always one of his hands faced Brewster, and in it he held a slender green tube. He bent down and picked up the drawbag and when he rose he looked at Brewster’s solemn face. He turned the tube around in his long fingers.

"Not now," Ahriman said softly. "First we must talk."

He nodded and motioned Brewster to the door. Brewster started walking and said, "You can’t do this. I’m under the Ho-Ghan’s protection and if anything . . ." He didn’t finish, nor had he meant to. The words, couched in a slight whine, tinged with fear, were meant to distract for a brief instant and that instant arrived when Brewster reached the door. As the door slid open, Brewster started through, then with a single move stretched his long arms out so that each of his hands were braced against the sides of the doorway. The pressure he applied through his hands was enough to support his body as he suddenly swung off the floor and kicked both legs behind him.

His feet struck Ahriman squarely on the chest. Before the Jev had staggered back more than two or three feet, Brewster had already landed, spun about and dived at him. His outstretched arms caught around Ahriman’s thighs. They hit the floor together but Brewster had unlocked his grip, so that when his open palms hit the floor they acted as a lever and swiftly pushed him up. In an instant he was standing over Ahriman. As the Jev’s hand swung upward, Brewster kicked it aside and his foot went on in and smashed down heavily on Ahriman’s face.

The short-lived struggle was over. Ahriman lay unconscious, his nose broken in a bloody smear, the blood flowing into the hollows of his eyes. His body shivered convulsively and he was still.

Brewster walked unsteadily to where Vrita had started to get up from the floor. He tried to help her but she brushed him aside. Her slender face was grim with purposefulness. She picked up her bag from where Ahriman’s fall had thrown it, took out the black case and opened it and started toward Ahriman’s inert body when Brewster quickly got in her way.

"What are you going to do?"

HER laughter was short and forced. She made no answer but held a hand over the shimmering stone. Her fingers caught in flame and she held her hand up. "For Ahriman," she said, and swept around Brewster to the Jev. Before he could stop her—he wasn’t sure that he wanted to—she had knelt and touched the flames to Ahriman.

The fire caught with a prolonged hiss and began to spread over the Jev’s form, racing quickly. . . .

Brewster stood beside Vrita until the end, until not an ash of the once mighty Jev Ahriman remained. But one thing resisted the fires, emerging, as it seemed, from the consuming flame, until when the long lifeless body had vanished, it alone lay on the floor, bright and hard and enduring. And when Vrita bent over to recapture the flame and restore it to its stone, she picked this thing up.

It was a thin, iridescent blue disc an inch in diameter. It had been the central jewel in the representation of the Anzus Ahriman had worn, but it had been covered with brilliant thread and jewels brighter than itself. Everything around it had burned but this remained. It lay in Vrita’s quivering palm like a thing alive, and indeed, as she held it a darker black inner circle appeared and
contracted to a pin-point, like an eye’s pupil in intense light.

Brewster wasn’t sure that he did. There was too much here for him to grasp all at once. His quick brain had encompassed the larger aspects, but the details resisted him until the puzzle was like a newer, more deadly fire within his mind. He shook himself and said nothing, waiting for her to go on. A plan was forming in his mind but he delayed its execution.

As if some understanding of his thoughts had come to her, Vrita stepped away from him, her eyes clouding.

“What did Ahriman mean?” Brewster asked quietly.

Her eyes kept searching him until he turned and walked away, his back to her. He lit a cigarette and smoked. Her voice came to him, a soft, conciliatory voice.

“I used Ahriman to help me overcome Thyle. I knew he hated Thyle and after today their enmity was open. I saw that if Ahriman should prove the victor that it might mean your life—”

Brewster spun around. “You used Ahriman to kill Thyle and all the while you planned eventually to get rid of Ahriman?”

She shook her head. “It would not have been necessary. Ahriman had brought three tor* Anzus as close to Ho-Tonda as he could. My part of the plan was to place them where they might enthrall Thyle. It happened in Thyle’s own home on the Yassidi canal—I was there when Thyle tore the stone from his robe and burned himself alive. Then I came to destroy the Anzus I knew was here—”

“You hadn’t planned to meet Ahriman here?”

“No. He must have guessed my fears and followed from—”

“Your fears? Then you do have—” She cried out angrily, “Listen and try to understand this thing I have done for you!” She waited and calmed, then said, “When Thyle was gone I seized the amber stone. I had reason to fear Ahriman—for if Thyle had no heirs, whoever gained and claimed before the council of Jevs would be sustained in his claim. Tomorrow the possessor could summon the council—tonight Ahriman knew I had it. I knew I had to destroy all three Anzus before Ahriman could use them to force me to surrender the stone to him.”

SHE waited for a sign from Brewster but it did not come. “Alone I was powerless against Thyle,” she said, “but without my aid Ahriman could not place his Anzus, for there were guards and warriors and elaborate warning systems which I alone could overcome.”

“And which Ahriman trusted you to do for him?”

“Yes.”

“But why should he have trusted you?”

“He knew I hated Thyle.”

Brewster nodded and said, “But there was more than that. There’d been enough between you for Ahriman to feel sure you’d do it. Right?”

“It was before I met you. There has been no one else since.”

Brewster grinned dryly. “I’m not complaining—I just want to get this straight. It needs a little straightening,
don’t you think?”
“What do you mean?”
“When did you find out Thyle knew about us?”
She hesitated. “This afternoon... after the council meeting.”
“Takes thought to keep it straight, huh?” Brewster’s grin came back hollowly. “If Thyle knew before the meeting, I think you’ll agree he’d not only have voted with Ahriman—if I’d lived long enough to get to the meeting—but he’d have taken a hand in the torture you mentioned. But if, as you say, he found out after the meeting, where did you get time to plan this affair with Ahriman?”
“It needed little—”
“Save it. I know the Jeggian Code* Getting one Anzus, let alone three, near a Jev was a difficult business. So I’d say you’d planned it some time in advance—and your killing him today had nothing to do with saving my life, whether or not it’s true that Thyle found out about us. In other words, you had an immediate reason—but it wasn’t me or my life. What was it?”
“What do you think it was?”
Brewster took a step forward. As he did so, Vrita moved farther away, increasing the distance between them. Brewster was still grinning as he said, “We understand each other, don’t we? You’d planned to give Ahriman the stone, but something happened today that made you change your mind and decide to keep it yourself.”
She kept looking at him, then spoke slowly. “Yes,” she said, her eyes gleaming. “You are right in most things. Even at this moment you are ready to seize the opportunity to leap at me and take away the stone. If you were sure you knew how to handle it, you would do it now...”
Brewster sighed. “Right,” he agreed. “And here again you prove my love for you is not misguided.”
Before Brewster had recovered from his astonishment at her quiet declaration, she had run to him and thrown her arms around him. He held her close, feeling her body tremble, his mind in a whirl. The plan he had formed and admitted to her was shattered by his confusion.
Presently she released him and stood before him and held out the drawbag and the Anzus eye for him to take.
“For you, my own,” she said. “The one thing you did not guess.”
Brewster stared at her and wearily ran his hands over his face, his eyes dull and puzzled. “Vrita... I... I...” He stopped trying.
“I understand,” she soothed him. “There was so much you could not know.” She smiled at him tenderly. “Shall I tell you? Does that sharp-edged mind of yours still reach out to grasp nothing but air?”
He nodded slowly.
“You were right, she said softly. “The plan was formed when the Ho-Ghan killed the Jevs. When the new Jevs Azevedo and Nastrond fell under Thyle’s influence, Ahriman knew he would never, so long as it persisted, have a voice in the council. For the sake of our relationship, I consented to his plan. But before I could carry it out, I had met you, and from then on I delayed... because a plan of my own had come to me. I needed time to find out if I was right.”

TODAY I knew. When Thyle told me what you demanded of the assembled Jevs, I decided to carry out...
Ahriman’s plan for my own purpose. I brought Thyle here, but the Anzus had not yet been placed in readiness. While we were here, a private call came through for Thyle on the Sinju. I didn’t know what it was at the time, but it was the information that you and I...” Her voice became hard. “He came storming out of that room and seized me and took me to his home at Yassidi, evidently waiting for someone to arrive. It was while he waited that the Anzus there became tor and he destroyed himself before my eyes.

“I knew Ahriman was nearby and I had to act quickly. I took the amber stone and destroyed the Anzus. Then I went to Thyle’s villa near Ujannor where his heirs lived, and where Ahriman had placed the second Anzus. Last of all I returned here. I found the lights still on, as I remembered Thyle had left them, but the shock of finding you here, in agony on the floor, drove the Anzus from my mind until you spoke. Then I realized that Ahriman must have come here later and left the Anzus tor and you had walked into its active field.

“But Ahriman evidently followed us to Kardandan. Perhaps it was there, or more likely in Ujannor that he divined my plan. When he heard us speaking here, then surely he must have known that I myself had decided who would succeed Thyle...”

Brewster looked at the drawbag she had offered him and which he had not taken. He said in a quiet, troubled voice, “You mean me?”

“Yes, my love,” she whispered. “Though you are not born of our race you are one of us in mind and spirit and being. These things I know as only a woman can know.” She looked into his eyes. “The gods of Jegga are with us. I planned only for you to succeed Thyle, but now with Ahriman gone, you will go to the council to assume the mantle of the mightiest Jev of all: the Lord Thyle-Ahriman...”

“But what of Thyle’s heirs? First you said there were none—then you said they lived in Ujannor.” He kept staring at her.

Poised and serene and lovely, she smiled at him. “There were heirs,” she nodded. “I removed them, for how else could you become the Jev Thyle while they lived?” In the silence she added, “The knowledge that there no longer were heirs, more than my destruction of his three Anzus, told Ahriman what I was doing—for when he seized the stone he gave evidence that he knew it was for him who could take it.”

Brewster said thinly, “And Ahriman’s heirs?”

“There is but one confirmed, his brother. Before word of the passing of Ahriman is common, we will have removed him.” She swept her arms up on his shoulders and pressed her cheek to his. “Shall I let so trifling a matter stand in our way?” she asked. “I, who for your love, this night killed the two sons and heirs I bore Thyle?”

Long minutes passed and then Brewster gently separated himself and took the drawbag and the central eye in his hands. He kept looking at them, and when he raised his eyes to Vrita, they were thoughtful and overcast and he didn’t seem to see Vrita at all.

“Nick, my love, you haven’t told me you’re happy.”

It was as if he heard her moments later. He nodded then and his voice was quiet, and somehow had the quality of a sigh, when he spoke to her. “Vrita, I thank your gods and mine I met you. I am happy, my dear, very happy...”

He took her in his arms and kissed her.
CHAPTER IX

IT WAS a simple note. It had been placed, as usual, in a pack of Brewster's cigarettes.

Before it's too late, before the ascension, go to the Imperial library and get hold of Descoru es Jegga jon Jev, volume II, and read pages 60-62. Even for a big shot like you it won't be easy to get into the library if you announce it, so you'd better wander into the vicinity accidentally and bluff your way in before you can be stopped. Here's a map of the palace wing you want, beyond the Ho-Ghan's gardens—the library is marked X.

But there was more information than was contained in the note to be found among Brewster's cigarettes, for he discovered that three cartons had been taken from his supply. It was rather a definite answer to Abbott's latest disappearance. It looked as if this one was meant to be final—and said so.

As to when Abbott had pulled out, no one knew. Brewster had not returned to the Inner City for two days after he left so suddenly that fateful night. The intervening days he had spent with Vrita, locked in the security of Thyle's castle more than a thousand onum from Ho-Tonda, working to arrange the innumerable pre-ascensional details that claimed his attention. Through Jev-korman and ohfran and kotai,* through these ceremonies and dozens more, Brewster gave his energy. And though he had counted each precious passing hour, a strange patience had settled over him. He could afford his duties time now because time had already run out on him, and he knew it. . . .

When he returned to the Inner City, to the now empty Krennian wing, he came as heir-apparent, and with him all the trappings and fanfare of the rank he was to assume that day . . . and he was weary. The day before he had appeared time and time again on the Sinju while numerous commentators explained to Jegga—and others on the Tonju gave the news to the Empire—how the Ho-Ghan had elevated the leader of the Krennian FYavos to Jev, Lord of the Flaming Stone. It was a symbol of unity between the Empire and the world of Kren which would soon be opened to enlist under the Ho-Ghan's banner. And, so the news went, the opportunity for all this had been given the Ho-Ghan when Jev Thyle and both his heirs had perished in an accident, the details of which were not yet to be given out.

The story was necessary, Tubal, Luanoe of the Censorship, assured Brewster, to preserve balance throughout the Empire. It was not yet known what Jev Ahriman would do, Tubal had pointed out soberly, and the wiser course was not to infuriate him unnecessarily—for already he had withdrawn and refused to answer the summons to the council meeting. Brewster agreed to everything, to each request at ohfran, exercising no initiative at Jev-korman, listening to Vrita and Tubal and to Iga, Luanoe representing the council. As he was patient, he was almost docile . . .

But in one thing he had been adamant—his solitude when he returned to the Inner City. He dismissed his

---

* Jev-korman—grants of power by the Jev to the members of his army, or the ceremony by which such grants were given, including also oaths of fealty by various Luanoe, Ovis (captains) and other officers. Ohfran—a wide category, meaning generally: indulgence. It included property arrangements, granting of pardons and boons, promotions and rewards. Kotai—pre-ascensional ceremony of pledging fealty to the four other Jevs and the Ho-Ghan, and the declaring of heirs in their order. Also the submission of new names if the Jev was of a different family than a predecessor—this last an antiquated feudal custom—Ed.
servants and attendants, his Lanae and officers—he scarcely knew half a dozen of them by name—and he had come alone to the quarters he had lived in, to find in their peaceful desolation a few hours in which he could think. There had been a forlorn hope in the back of his mind that he might find Abbott waiting there, but it had vanished when he found the note.

It was odd, that note. Undoubtedly the rooms and all the effects in them had been thoroughly searched and by more than one interested party—yet here was this note. Brewster knew, of course, that it had not eluded detection because it had not been there to detect. It had been placed in the cigarette perhaps minutes after Brewster arrived in the Krennian wing.

Brewster had quickly walked through the wing. It was, as he had ordered, empty, except that out on the central terrace, he found Poro, the Phyladian whose life he had saved. The green-skinned brute had often been found by Brewster, sitting thus, his great cloudy eyes scanning the horizon, his strong face relaxed and calm. He had become a fixture in the wing, a silent figure whose presence or absence was scarcely noticed by Brewster. He had looked at Brewster then and bowed obediently.

AFTER that Brewster had gone, as the note directed, to the palace wing beyond the Ho-Ghan's gardens. Wearing his gray civilian tunic and sneaking out through a side door, once he dispersed the guard he found even there, he was able to lose himself in the thronged, bustling halls of the palace. But as it had not been difficult to cast aside his now celebrated identity for a little while, this same anonymity was a hindrance when he reached the site of the Imperial library. The great marble doors facing down an empty gal-

lery lined with Argyres bore the legend Coru Es Ho-Ghan on its massive hexagonal seals. Brewster, instantly conspicuous because he was alone, had wandered to the door, but as he had come up to it the guards had planted themselves in front of him. Several officers had come running down the corridor. Until that moment Brewster had shown only desultory interest in the doors, but then, as the officers had shouted at him and been about to lay their hands on him, he had stepped back, his face the picture of so cold a fury that it stopped them. And his voice, quiet and controlled, somehow more audible because of their shouting, had sounded deadly.

"Ento o brui. O dej-Jev Thyle."*

When he started forward again, they melted out of his path. He had acted, as he had planned, as if these warriors were stable boys back home, refusing the owner entry to his own premises. It was a part that came easily and naturally to him, and though he was now long past being able to feel the sting of the thought, there was still a vestigial bitterness to his easy success. He had entered the Coru, the library or repository of histories, searched the elaborate archives for the title, and though he had been able to translate Descorue es Jegga jon Jev as History of Jegga and Jev, he knew the language would prove too much for him. So, finding Volume II, he had slipped it under his robe and gone out of the library shortly after entering. Ostensibly he had gone in to humble the guard; the point made, he had left.

And then, back in his own quarters, the Introduction to guide him, he had read pages sixty through sixty-two.

Now, the bulk of it translated, he

* Dej-Jev—literally, Jev-to-be, or heir-apparent. (What Brewster said was: "Stand aside, I bid. I am Jev-to-be Thyle.")—Ed.
... and so Jev wept, and his eyes were not dry so long as he gazed upon Kren, nor would he leave Boron. It is written in the hand of Proh, who lived with him that last winter of his life, that Jev knew no peace, knowing the world of Kren to be beyond his grasp...

... at length, weary and weakened by sorrow, and, so says Proh, often given to talking aloud when none were present to listen, Jev wandered naked across the barren face of Boron to stand on its highest peak. And there he stood for the time of a full revolving of Boron around Kren, and he would not sleep nor take food nor water, nor speak to any man, but he stood there and wept as he looked down at the green fields of Kren. And the revolving done, Jev permitted himself to die, but before he died he spoke for the last time.

"O Kren, O Aaxia, thou most prized of all, thou hast been given to out-live Jev, but there will be a day when another Jev shall hold thy green throat until all who live in thy quiet fields shall remember to curse the time in which the dream of Jev came to naught..."

... and until that day none who spoke the tongue of Jegga or Estannar, or the tongues of any of the empires or kingdoms or dependencies that Jev had conquered, in none of these tongues was there to be found the word Aaxia. So writ Proh. But from that day on the word Aaxia came to mean most-prized, the name by which Kren was henceforth known, to keep imperishable the dream of Jev and to

re-read its most salient—from the point of view of the writer of the note—parts, marking here and there a still elusive word. But it was clear...

"... Thus, when Jev had reached the age of thirty and one winters, he had led the armies of Lyrio to their final systemic victory. Behind him lay ten and four winters of campaigning, which had added to the young Empire not only the recalcitrant empire of Ermos and the kingdoms of Ania and Darziz and Phylades, but hundreds of smaller dependencies. In honor, therefore, of the most ruthless and cruel soldier in the history of Jegga, the Ho-Ghan Lyrio gave voice to the first of the later laws of Jevro:

"From this day forward, saving only the Ho-Ghan, the mighty of the mighty shall be known as Jev. The name Jev shall become a title bestowed by the Ho-Ghan upon the War Lords of the Empire first created by the first Jev. So long as the Empire shall persist, so too shall the name and title Jev..."

... and in the time of his fifty and sixth winter, great Jev, who for twenty winters had lived in Boron, the small moon of green Kren, knew that within his lifetime he would not see the conquering of this most beautiful of the inner worlds. The secret that had countless centuries before enabled the men of Jegga to penetrate the atmosphere of Kren, had gone with them. For twenty winters Jev had sent his warships, of such construction and such another and yet another, to essay the journey, and he had seen all turn to flame. There was no way. There was no way..."
serve as reminder that the vengeance of Jev would one day be visited on Kren. . . ."

HAVING read and re-read these paragraphs, Brewster put away the Introduction and the Descoru—or meant to, when he looked up and saw Poro, the Phyladian, standing on the threshold of the balcony, looking into the large central chamber where Brewster had sat reading.

It was the first time Brewster had ever seen Poro watching him, and the silent scrutiny brought an imperceptible, thoughtful frown to Brewster, where the reading of the Descoru had not changed his expression at all. He returned Poro’s gaze, who stood there like a dumb, faithful dog waiting its master’s call, and seemed about to speak to the Phyladian when he saw the shadow of someone entering the chamber from the corridor. With a swift movement Brewster slid the heavy, gilded volume under the low couch. Poro, who had seen the action, now saw Akar coming in just as Brewster did, and he silently turned away and went back out on the balcony.

Brewster had not seen Akar since the morning after Thyle’s death and then but briefly, for Akar immediately appointed to ranking Lanae by Brewster, had had his own numerous duties. He advanced toward Brewster hesitantl; obviously acquainted with Brewster’s order that none be allowed into the wing, and half expecting Brewster to order him out.

Instead Brewster nodded pleasantly to him.

“Greetings, great Jev, son of —”

Brewster shook his head. “Never mind what I’m a son of,” he said with a wry smile. “What’s up?”

Akar looked uncomfortable. “Everything is in readiness.”

“A few hours after the meeting.” Akar’s face was stony. “First I checked on it. I discovered that she had executed every driver of the tyar that brought you to the lodge, and every servant or guard who knew.”

Akar was silent a moment. “I bring poor tidings,” he said.

Brewster said, “Look, just talk to me. Forget I’m a Jev. You used to be quite a talker. What are your poor tidings? Can’t find ’em?”

“I have sent messengers everywhere, armed with the seal of the Ho-Ghan. There is no trace of them . . .” He hesitated.

“Go on—what else did you want to say?”

“I fear perhaps Jev Ahriman has taken them. He has not responded to the council or the Ho-Ghan and will not be present at the ascension ceremony.”

Brewster said quietly, “I know it’s not Ahriman. The question is whether you honestly think so or know better. If I find out that you consciously lied to me, I won’t be easy with you. Remember that.”

Akar inclined his head, saluted, and turned to leave. Brewster said, “One more thing,” and stopped Akar. “This is something I meant to ask you before. You remember two days ago I showed you a batch of notes I’d gotten?” Akar nodded and Brewster said, “You asked me about the woman named Vrita mentioned in one of those notes. I know that you knew who she was. What I want to know now is—did you tell Thyle anything about it?”

“Yes.”

“When?”

“First I checked on it. I discovered that she had executed every driver of the tyar that brought you to the lodge, and every servant or guard who knew.”
could you find that out?"

Akar’s discomfort grew visibly. Finally he said, “I had a guard of my own to watch her.” His coppery skin flushed.

Brewster made a low sound in his throat. He frowned and asked softly, “Then you too?”

“It was before she met you. I knew I meant nothing to her.”

“You didn’t tell Thyle because you were jealous of me?”

“Thyle was my Jev. It was my duty to tell him.”

Presently Brewster nodded. “I admire your loyalty,” he said and nodded again, signifying Akar was free to go. When Akar left, Brewster went out on the balcony and stood beside Poro, watching the battalions of Argyres assembling below. A fever was running through the Inner City but Brewster was calm and thoughtful. . . .

* * *

The ceremony of the ascension had the extravagance and the almost intolerable slowness of a dream, and Brewster went through it like a dreamer. He scarcely saw the vast banks of people or heard their voices. There was color before his eyes and sound in his ears, and here and there would be a face he knew, a uniform he remembered, but nothing more. The sight of the Ho-Ghan, veiled as was his prerogative, hardly stirred him in his lethargy. He stood alone before the Ho-Ghan and the three Jevs and went through the ritual with the amber stone, his fingers aflame and the flames not burning the red robe he accepted from Jev Eblis, and he repeated the words he had learned by rote. When the parades had stopped and the music died away and the last ceremonial finished he went, flanked by great columns and warriors and Argyres, to the tower of the Jevs.

There he sat at the pentagonal table with Nastrond and Eblis and Azevedo and kept the word he had given to Lanae Iga at kotai. Seated and standing by the score all around the great table were the scientists of Jegga, waiting for Brewster to speak.

Then Brewster spoke, and began to explain the Earth science of making metal. His words fell in an awesome hush and he did not pause until he had spoken for more than two hours. Then the scientists and ministers spoke and he answered their questions, correcting diagrams, elaborating, explaining. The great Sinju screen that had been set up in the bowl traveled the length and breadth of Jegga, bringing the mines and smelters and roads of the vast system already built into close view, and here Brewster would comment, here suggest something.

It was as Joe Abbott had said—everything was ready. But now the hills and the Kardandan canals and the Pingui red mountains which Abbott had searched vainly with the Sinju, all these and more came into sharp, distinct focus.

It was dark when the council adjourned, and Brewster returned to the Krennian wing. He sank down to an exhausted slumber from which he kept awaking to stare bleakly at shadows. Late that night he began to wander through the quiet chambers, feeling the presence of guards everywhere though the chambers were empty. In the central chamber he found Poro sitting awake, and only then was he able to return to his uneasy bed and find sleep.

* * *

On the second day after he had become Jev, sixteen days after the coming
of the Earthmen to Jegga, Brewster knew he was losing control of himself. It was a new sensation to him. He felt the remnants of his patience slipping away, and his newly found calmness with it. The cold fever that had run through him the night Thyle had died now returned and he could not fight it off. He was waiting for something, and when it did not come he knew he would have to go out and meet it, to force it to come.

What slight comfort he could gather from his mental state was the fact that he was still aware of what was happening to him. He could preserve his balance and hasten the end by losing himself in work, and there was work to be done.

So on this second day, he left Ho-Tonda for an extended tour of Jegga to supervise the beginning of operations in the great network of mines and hearths which his knowledge had made it possible to function. As a Jev he could not travel alone, but he excluded Vrita from his entourage at the price of a stubborn refusal. His action, and the actions which had preceded it at the ascension, were inexplicable, and he could not have afforded it had he not sensed the immediacy of the end. But it had been dangerous.

She had come to him in the Krennian quarter the night before. It was their first meeting in three days. She had looked at Brewster as he stood before her, troubled and faintly aloof, wearing the red robe as if he had been born to it, and she had spoken her mind.

“You have not seen me. You have not called me.”

“It would have been violating the tradition. You are a widow.”

“Was I not a widow three days ago?”

“I was not a Jev.”

She had hesitated, then: “What of Ahriman and the Eye?”

“I am Thyle. It is enough for me now. I must not forget that I am a Krennian—it would mortify your people if I were to claim the seat of Ahriman.”

“But what will you do with the Anzus eye?”

“Nothing, now. The decision can wait.”

“The secret of Ahriman’s death will not keep much longer.”

“I know.”

She had studied his inscrutable face and found nothing and then she had said, “You will not mortify those whom it is your privilege to mortify, yet you hurt me, who bestowed the privilege on you. What has changed between us? Do you love me no longer?”

He had taken her in his arms then, and kissed her. “Leave me now,” he had said. “Don’t come again until I send for you. I’m going away tomorrow. When I return there will be time to talk. But not now, not tonight. Try to understand.”

When she had left, he wasn’t sure whether he had acted wisely. There had been danger in both the courses open to him. Four days before he would have chosen the other, but that night she had revived the memory of the words she had spoken to him, and fighting it he had taken the chance. It hardly mattered, he thought, that he had perhaps tipped the scales even further against himself. It was getting too late now to do much about it.

The next morning he had left for Pingui. From there he had gone to Kardandan, and then to the great blooming mills of Zorka, and then to the Totamangu mountains. There in the great open hearth furnaces he had touched his amber stone and set the intelligence of Thyle’s flame to its task.
And seeing it do its work, he knew that he had given Jegga and this, its own fire, the spark that would spread to an industry greater by far than any on Earth. He had looked out upon the sea of faces of innumerable workmen drawn from the universe in all their variety, and it had been too great a thought for him to keep the end in mind.

So he traveled for five days, the center of great parties and feasts and celebrations, and surrounded as he was by his Lanae and ministers, and the numerous officials of every neighboring province and city, he knew a greater loneliness than ever before. And all this time he was waiting, knowing it would come... and yet beginning to wonder.

For in his mind he had built a structure of bits of information, of vague perceptions and ideas, and in more than one sense it might prove to be a house of cards. He was the same Sure Brewster, gambling for stakes beyond his comprehension, but forced to gamble now. He was waiting to draw his cards... .

* * *

IT CAME in Ramusio on the fifth day, exactly three weeks after he had first landed in Jegga. He had almost been certain of it there, if anywhere, and he had given it every chance.

Ramusio was four thousand onum from Ho-Tonda. It ranked perhaps twentieth in size among the cities of Jegga, but it was a sprawling giant of commerce. It was the hemispheric junction of four canals and its space-port ranked with Kael, and through it flowed much of interplanetary culture. Yet it was a wild and violent place. In its ancient streets the many-hued natives of the universe outnumbered those of Jegga, and its gay life was conducted in a hundred variant dialects of the Jeggian tongue. It suspended many of the planetary laws of Jegga and substituted its own or none at all. From morning until night its skies were dotted with arriving craft, its canals clotted in perpetual traffic.

When Brewster first asked to go to Ramusio, Akar and his Lanae advised against it. Brewster listened and repeated his order and the matter was closed until they arrived in Ramusio. There Brewster decreed two holidays for the army of warriors that had accompanied him, and thus opened the door.

It was during the feast given in his honor by the Vice-Regio of the province that the staffs were rapped and a voice called:

"The Fyavo Abbott."

There, across the noisy, crowded hall, stood Joe Abbott. He was dressed in a blue civilian tunic, with nothing to distinguish him from an Estannar except the jagged emerald that hung from a cord around his neck. He gazed around the hall until his eyes lit on Brewster, then he smiled and came forward.

Akar had instantly gotten up beside Brewster and ordered one of the adjoining chairs vacated, but Brewster had risen a moment later and quietly ordered Akar to see that the feast continued until his return. He met Abbott halfway across the hall and Abbott bowed and touched his hand to his forehead before he shook Brewster's proffered hand.

Abbott said, "O bruio ro, Jev Thyle," smiling faintly.

Brewster half-laughed. "Come outside," he said.

He led Abbott to a roof terrace and motioned to a Lanae to clear the place. Silently he took out a pack of cigarettes
Brewster stared at her loveliness. "Who are you?" he asked.
and saw the way Abbott regarded them and offered him one. He lit both cigarettes and watched Abbott inhale and exhale gratefully. The night air was still.

“You look as if you hadn’t had one in a long while,” Brewster said. “I’d have thought three cartons would last longer than a week.” He grinned and added softly, “Unless you found six other guys who wanted a smoke pretty bad?” He tried to meet Abbott’s eyes in the gloom.

Abbott looked at him and said, “You’ve done all right, Nick,” in an emotionless voice. “I don’t suppose you can go much higher, huh?”

Brewster glanced at him sharply and said, “Warn them off, Joe. It’s no good here. This whole area is heavily guarded. Let me arrange it when there’s a chance.”

Slowly Abbott shook his head. “You’re good, Nick, you’re good. But this is different. Not even a smart cookie like you can break out of what’s already been arranged.” His face twisted into a hard smile. “But you knew we’d come for you, didn’t you? You saw how things were beginning to shape up a little differently than—”

He pushed Brewster’s hands away angrily. “Not me,” he said. “I’m not the boy. I couldn’t hope to get through to you if I were armed. So I’m doing the next best thing—I’m the finger man, to make sure you’re not confused with your adopted Jeggite brothers.”

“You fool!” Brewster snapped in exasperation. “You haven’t a chance! I’ve been expecting something like this—”

He broke off as Akar came hurrying out on the terrace, his face grim and purposeful. Two Lanae stood beside him and behind them were long columns of warriors who fanned out all along the terrace, at the ready. Others came up bearing a wandho screen.* Akar saluted,

“Your pardon, great Jev. Lanae Tuew declares the Fyavo Abbott to be carrying something with the substance of Estannar on it. Therefore, with your permission, the wandho is ready.”

A slow baleful grin spread across Brewster’s face. He turned to Abbott and said, “You see? Maybe you don’t know what a wandho is?” He studied Abbott’s tight lips and sighed. “I see you do, so you’d better hand over whatever it is.”

“No,” Abbott said. “Turn on your screen.”

One of the Lanae barked an order, but Akar raised a hand and stopped the warriors who were adjusting the screen. A crafty look shone on Akar’s intelligent face. He held a little green tube in his hand as he advanced to Abbott. “No,” he said, “I will take it upon myself to search the Fyavo.”

At that instant, as Abbott turned about and made a dash for the rail, Brewster quickly stepped forward and brought his fist down in a slashing blow on the back of Abbott’s neck. Abbott went sprawling over and fell against the rail. Two or three steps more and he would have hurled himself to the street hundreds of feet below. Brewster’s hands were unsteady as he kneeled and searched the unresisting form. The blow he had given Abbott, because he had been prepared to give it, had knocked Abbott senseless. Now he stood up again, holding in his hand a small tube-like pink cylinder.

Akar accepted the cylinder and turned it over in his hands and nodded. “It is as we hardly dared hope. This is an Estannar signal flare. The wand-

ho would have detonated it instantly—“he looked meaningfully at Brewster, “—and killed your friend the Fyavo.”
“And the effect of a sharp fall?”
“The same. It has a delicate mechanism for so powerful a flare. I have seen these in raids on Boron.” He paused. “There is but one answer—the Estannars are in position for an attack on your life.”

Brewster nodded soberly. “You’ve been ready all this while?”
“At a moment’s notice, mighty Jev. No onslaught, however desperate, could succeed against us, but now with the starting signal in our hands, my captains will look forward to another Charchan.”*

Brewster looked down at the unconscious form at his feet with a look of contempt and pity. “Send him back to Ho-Tonda and keep him under guard in the Krennian quarter. See that no harm comes to him—I have my own plans for him.”
“And you, mighty Jev? You must not—”
Brewster stopped him with a hard smile. “You would have the one you call mighty Jev run for safety, Akar? No. I am a great admirer of the Jeggian techniques. I will be with you.”

* * *

No outward sign of change was allowed. The feast continued and the wine flowed. Many of the Lanae remained and half the warrior guard, but Brewster and Akar left immediately in a tyar that landed on the terrace and took off again in the darkness. From the vice-Regio’s palace they proceeded through guarded, nightbound skies to the military spaceport several onum from Ramusio. Here waiting launches shot them skyward to warships that lay at space-anchor high over the city, their sleek bodies dark and their muttering rocket-tubes shielded.

Brewster recognized the warship in which he found himself as the one which Akar had previously commanded. Nothing in it had changed, and its new commander proudly led Akar and Brewster to the oval control room in the ship’s bow.

The plans, as Akar had said, had already been prepared, but now every warship had time to build up its rocket-power before allowing its blasts to be seen. Since none of the military stations or lightships had reported more than isolated vessels anywhere within range of the signal flare, the Estannar plan was clear. They could not have hoped to storm the tower of the vice-Regio’s palace with foot troops; thus it was a certainty that they had filled the dark skies over Ramusio with armed tyars, waiting to descend on the tower, overwhelm it, and flee before any power could be brought to bear against their scattering number. It was to be no more than a large raid, the only attack—as Akar explained with contempt—which the Estannars were capable of planning.

“Suppose it had been launched as planned?” Brewster asked. “How would you have met it, with only a few moments’ notice?”

Akar smiled as his hands expertly played with the code keys on the control board. “A few moments’ notice would have been more than we needed. You were in no ordinary tower, my lord. At the first sign of alarm the entire hall would have descended two hundred feet, and the tower itself filled with warriors. But now our warriors have been warned to keep out of the tower

* Charchan—the scene of a great massacre of Estannars who were caught with a huge fleet and no fuel for its ships after the Jeggians ambushed a convoy of fuelers. The one-sided battle of Charchan, and its effects on Estannar morale, ended one of the great modern rebellions—Ed.
we mean to sweep clean."

Akar spoke into the little phone beside him. Answers kept crackling back, and the control board danced with lights. Painstakingly, Akar repeated the changes in orders, apologizing to Brewster for speaking in Jeggian, though Brewster understood almost everything; the military language was a sort of simplified Jeggian, condensing even detailed and complex orders to a few words.

Half an hour after they had left the vice-Regio's palace, everything was ready. There was no tenseness visible on Akar's darkly smiling face as he began the action. He switched on the Sinju and under his nimble fingers the screen searched Ramusio for the palace, then held it. He pressed a button. Five seconds later a pale red streak shot into the black heavens from the tower. High above it the streak blossomed until the sky seemed to be overcast with a thin film of blood.

Suddenly the streets leading to the palace were cut across with hundreds of slender green beams. Other beams met them, falling back under the original onslaught. Then, just as the red glow in the sky came its brightest moment and began to die away, hundreds of tyars were revealed in its light, swooping down on the palace. For a moment Akar put on the speakers attached to the Sinju, and the whirring thunder of tyars and the shrieks of the city filled the control room. When Akar turned off the sound, he touched a glowing button at his fingertips and its light went out.

The warship quivered and came to life with a great roar. Suddenly the miniature city in the Sinju was flying off the edges of the darkly lit screen and the palace kept growing. Akar's hands rested on the control board gently, watching the Sinju intently. The attacking tyars had landed on the tower by the hundreds, and others buzzed in the air all around it like swarms of maddened gnats. But there seemed to be little fighting there, for hardly a streak of green was to be seen. And then several of the tyars began taking off.

"They've seen us coming," Akar said.

At that moment three warships flashed across the screen and from their bows great forked tongues of blue-green lightning lashed out to hit the tower. Instants after they were gone, when the luminous afterlight of their bolts had died away, Brewster saw the enormous holes the bolts had punched into the tower. He caught but a glimpse of the tyars as they spilled into the streets, smashed to bits, and then three more ships and three more again dived in for the attack, and the rhythm of their attack made the Sinju, at so close a range, too brilliant to be of any more use.

But the Sinju flashed upward and great searchlights on the ground below probed white fingers to catch the remaining tyars as they scattered. Directly under the main deck of Akar's ship, Nastrond guns sent a shattering broadside into the air directly ahead. Looking up quickly through the glassite ports, Brewster saw the Sinju's scene come alive.

Akar's ship was in the fifth group of three, coming in last to crush whatever tyars had escaped. It swung through the sky, its arc caught in the lights below, and crippled, blazing tyars were swept off its sleek bow and sides as it knifed into the area around the palace and was gone, its wake a wide swath of destruction.

Now Brewster took the Sinju and manipulated it to hold the scene they had left behind. The upper tower was a ruin in which nothing stirred. Its
crumbling upper walls were falling down into streets alive with flashing lights and red-orange pyres. The air over the entire area was empty, and only fiery particles discharged from the warships’ rocket tubes were to be seen, drifting slowly down. Brewster sat gazing into the Sinju, lost in thought, hardly hearing Akar’s voice.

“Action concluded, my lord. What are your orders?”

Brewster shook his head. . . .

And so the thing for which Brewster had waited had come and gone and the opportunity with it. But it was not yet over, for the next day brought startling news.

CHAPTER VII

ABBOTT had escaped!

Brewster sat there and heard Akar speak, and he shook the weariness from his sleep-numbed brain. The blow crushed him.

“How did it happen?” he murmured. “Tell me everything.”

“According to your directive, the Fyavo was sent last night to Ho-Tonda. He arrived there shortly before dawn and was confined to the Krennian wing under house arrest. Two hours ago the Argyre watch changed and it was discovered that the entire guard of picked warriors had been slain and the Fyavo gone.”

Brewster swung his legs to the edge of the bed and reached for the robe he had hurriedly taken off when Akar knocked for admittance. He looked incredulous. “How was it done?”

“Three of the guards had been hurled over parapets and the other five strangled. The officers are at a loss to understand it, but they believe it was the work of a band of Konos searching for you under some previous, out-dated instruction.”

“Konos,” Brewster repeated thoughtfully. He got up and walked about the little room and noticed he had not wrinkled the bed sheets sufficiently, and he looked to see whether Akar too had noticed it, and to take his attention, he asked quickly, “But how could they get into the Inner City, let alone the palace?”

“For the past two days there have been mass attacks,” Akar said grimly. “Last night, shortly before the attack here in Ramusio began, Konos descended on Ulatai and completely demolished the new forges. It was obviously an attempt to draw our forces to that area. It failed, if only because we knew they were already set to attack here, but the destruction at Ulatai was great.”

Brewster was silent and thoughtful.

Akar said, “I bring you a message, therefore, from the council. It met this morning, and has decided, with your concurrence, to undertake drastic action. The Jev Eblis moves to arrest every Estannar in Greater Ho-Tonda.”

Brewster cocked his brows. “Every Estannar? How many?”

“Perhaps seventy thousand.”

Presently Brewster nodded. “Send my concurrence,” he said, and as an afterthought: “Arrange everything for my departure to Ho-Tonda at once. Appoint Lanae Tuew to take charge in your absence.”

“My absence, my lord?”

“Yes. You won’t be going with us. I have a special errand for you—an errand I trust to no one else. Come back quickly.”

When Akar went out Brewster hurriedly dressed, putting on the red robe he had worn for days. From under a cushion of a sofa he removed his holstered automatics and buckled them under his robe. Then, waiting for Akar, he began to pace the room.
In Ramusio, as everywhere else he had gone, he had chosen a tiny room in a military establishment as his own temporary quarters. His excuse had been unvoiced, but seemingly indicative of a fear of attack by Konos. But this would not have explained why he had slept sitting up in a chair or a sofa, starting at every sound though he was surrounded by a corps of warriors. Now, on the sixth day of a vigil that might have erupted into violence at any time, he was exhausted. Every nerve-end was raw, his cheeks sunken, his eyes haggard and red-rimmed. The Konos at Ulatai had unwittingly lengthened his life-expectancy, but it could not go on. In Ho-Tonda the last links would be broken today. He had to act immediately, to hope—as he now saw there had been good reason to hope, that he was right. But most of all he had to act while he still retained some shred of sanity.

When Akar returned, Brewster said, "Now you and I will go alone to the vice-Regio, where—" He shook his head, seemingly changing his mind. It had to be done carefully. "Take a tyar and come with me," he said. "I am sending you on a secret errand to Vrita."

Studying Akar's face he had seen nothing. They left the Argyre fort and took an armored tyar, which Akar drove. It started toward the sunlit spires of Ramusio, but halfway there Brewster seemed to come out of his reverie and told Akar to put the tyar down. They were then over an arid, deserted area between two canals, and when Akar confusedly asked Brewster whether he meant directly below, Brewster nodded. He had maintained his attitude of absent-minded musing.

Slowly the tyar settled to the ground, and as it touched, Brewster got out and was followed by Akar. Saying nothing, Brewster started walking toward the edge of the nearer canal. The morning had lost its early chill and the sun was emerging golden from its red mistiness. Here and there birds wheeled in a cloudless, white-blue sky that was otherwise empty. A warm breeze swept over the sandy lowlands, combing the vivid green weed-brush that lined the canal banks.

Here, on the edge of the canal, Brewster stood and looked down into the still waters, his reflection redder than the water and that of Akar beside him a black and clearly defined figure.

"It grows late, my lord," Akar said quietly.

Brewster nodded. "There is a saying among us on Earth," he said, which is phrased: 'It's later than you think.' It is meant to reflect how time passes mortals more quickly than they know..." After a moment he went on. "It's very late now, Akar. This is my errand."

His hands fumbled at the jewel-encrusted oriflamme on his robe, and from the center jewel he took out an object that gleamed against the amber stone next to which it had lain. He held his hand to Akar and revealed the thin blue-black disc of the Anzus eye.

Akar's face grew tight and he looked at Brewster.

"Take this to Vrita," Brewster said. "Wait for—"

"But Vrita is in Ho-Tonda."

Brewster nodded and finished softly, "Wait for her," and he tipped his palm over so that the gleaming disc slipped from his hand and fell to the sandy earth between them.

Akar did not seem to have heard Brewster then. His eyes had focussed on the disc and followed its fall. Now he kneeled to pick it up, and only then did he seem to understand what Brews-
ter had said. Bent half over, his hand extended, he looked up to Brewster and the first dim flicker of alarm lit his eyes. His face was no more than three feet away from Brewster's, and for an infinite moment the two stared at each other and understood each other's thoughts.

And then as Akar started to draw away slowly, very slowly, as if what he saw had robbed him of the power to act, he tried to speak but no sound came from him. For as Akar had bent over, Brewster had reached under his robe and withdrawn one of his automatics. Its deadly snout was inches from Akar's temple. Now it moved down, and the hand that held it grew tight and the gun roared.

Akar fell as if he had been bludgeoned. Hunched over he took the blow and dropped on his side, then rolled over and lay on his side, his head near the water, his still moving legs higher up the bank. Blacker than his tunic, brighter than the jewels of his oriflamme, a wet stain spread quickly from the gaping hole in his belly. He was still alive, his eyes open and watching Brewster put the gun away.

Brewster stood over him. "Time ran out on you first," he said, his voice cold and sardonic.

He touched a hand to the still open jewel on his chest and let a finger brush the amber stone within. A tiny flame, almost invisible in the bright sunlight, danced on his fingertip.

"I prefer my own toys," Brewster said, "but if you lend someone one of yours, he may find a use for it."

He leaned over a little and pointed his fiery finger to the deep wound. The breeze caught the flame and it leaped over the intervening space and settled in the bloody hollow, and there it found a new vigor and began to spread. Brewster took away the slender green tube fastened to a belt around Akar's middle and stood up.

For moments longer, almost until the consuming fire had reached his eyes, Akar kept staring at Brewster. There was no emotion in them but surprise.

When it was over, nothing remained and where his body had lain there were glazed, almost molten sand-grains and a tall figure's depressed outline ... and the jewel of Akar's oriflamme. Brewster picked it up and opened it. Akar's jewel was smaller than the one Brewster wore but the amber stone within Akar's filled the jewel completely, and thus was actually larger than Brewster's.

Then he picked up the blue-black disc from where it had lain all this time. He turned it over in his hands a moment and then carelessly pitched it into the waters of the canal. The jewel he placed in a sewn pocket in his robe.

Without a backward glance he walked quickly back to the tyar.

THE journey from Ramusio to Ho-Tonda had taken six hours, and in that time, for the first time in days, he had slept with his clothes off. When Lanae Tuew, the dour-faced middle-aged Jeggit in command of the trans-Jegga tyar, came in to wake Brewster, Brewster's first request was whether Akar had reported via Borju.

He seemed faintly distressed when Tuew replied negatively, and searching Tuew's face he felt better. So far he was in the clear. He had wondered how far Akar had gone to protect his absence, and there had been uncomfortable moments when he had returned alone after purportedly having sent Akar on his mission. But no questions had risen and now he was playing to head them off.

"The air lanes around Ho-Tonda,"
Tuew informed him, "have been blocked by the military. Jev Azevedo sends his compliments and suggests a primary landing without the city."

"Of course," Brewster said. He washed and shaved while the vessel and its powerful escort landed at an Argyre field north of Ho-Tonda. Disembarking, he was met by Iga, the council representative, and taken to the field house where the port officers were gathered around a Sinju, watching the operations Iga explained.

Jev Eblis had struck quickly. Armored tyars held control of the lower and a fleet of warships cruised watchfully high above them. On the ground Argyres had combined with picked shock divisions of the three Jevs, in anticipation of a struggle which had not yet materialized. Indeed, the mass arrests were proceeding with singular lack of serious difficulty, and on the Sinju Brewster watched one small segment of the great undertaking.

A flying division had arrived to block off a freight canal. With the air lanes and roads closed, thousands had tried to escape along the canals. The sunlit red waters were clogged with vessels of every description, with rafts and even with swimmers. The troops hovered over the canal, stemming the horde. Again and again they would go in pursuit of someone who had broken through their cordon, diving down to within a few feet of the water to point out a swimmer to one of their patrol boats.

Two things Brewster noticed: that many of the fleeing people did not seem to be Estannars; and that no violence was being used. Wherever he saw them, the troops were merely herding people into the never-ending line of black tyar-vans along the canal. It was obvious that they were under orders to take live prisoners.

Presently Lanae Tuew came in and announced that an air lane had been cleared to the Inner City. When Brewster went out to the waiting tyar, it seemed to him that he could hear the massed voices of Ho-Tonda rising high in the air. But he could see little of what was going on below because his ship was surrounded by so heavy an escort. Landing to enter the Inner City, there was a new delay.

Few of the escorting vessels were allowed through. Enormous numbers of warriors swarmed the City's defenses, and unlike the handsome, decorative mounted warriors he had seen there so many times, these were hardened men, some grimy, with the smell of battle about them. Carefully they scrutinized each tyar though they held high officers. Brewster himself received a formal and impressive salute, both there and at the other walls, for the palace as well as the Inner City teemed with warriors, many of them in uniforms Brewster had never seen before.

Once at the palace, Brewster repaired to the Krennian wing, and there, surrounded by his staff officers he put through calls for Akar in Toctai and Kael and Cassia. Waiting for an answer he knew would never come, he paced the central chamber worriedly. The messengers returned to confess failure and at length, seemingly after an inner debate, Brewster called Lanae Catu, his chief of personal guard.

The concern on Brewster's face was far from sham now. He was about to test the first of his theories. Of all the ways it might possibly collapse, one of the most dangerous lay in too complete a success; if he was completely right, this first test was extremely perilous.

He said, "There was a Phyladian named Poro. This morning he was arrested. Bring him to me."

"I have heard of no such arrest, my lord."
“Then find someone who has!” Brewster snapped.

Catu retreated and left, and Brewster went to the room he had occupied and replenished his supply of cigarettes. He had no hope of finding one of the ubiquitous notes and he found none, and he went out on the balcony of the central room where he stood and smoked. Inside, his officers, perhaps twenty of them, had ordered wine and were watching the Sinju’s survey of the city with calm, deliberate comments, but Brewster could feel their eyes on him.

When Catu returned, bringing the Lanae and two captains of the palace guard, Brewster stepped in at the threshold of the balcony, and with the loudness of his voice kept the trio at a distance, stopping them in their tracks as they approached. Through his mind kept running the words he had spoken to the dying Akar—“if you lend someone one of your toys, he may find a use for it”—and he knew it was a time for boldness.

“I don’t want to hear your excuses!” he called angrily. “Bring the prisoner Poro to me!”

There was an instant of silence, and in that instant the thoughts raced madly through his brain: what if they should answer that Poro was dead? ... would Akar not have told him so? ... but if Akar had arrested Poro he would not have had him killed ... it all depended on whether Poro had been arrested ... and logic inexorably said that he had ... logic? ... but it was no more than a house of cards ... and so over and over he thought it through in that instant.

When the officers saluted and left without a word, he knew he had won the first round. The house of cards was still standing, but for how long?

He stood there waiting, watching the fleeting scenes on the Sinju across the room, while his ears were filled with the distant sounds of the beleaguered city. Presently the officers returned, and manacled to a heavy weight he carried was Poro, surrounded by Argyres. Brewster looked at the Phyladian’s dull face and then walked to him.

He said to the Lanae of the guard, “What instructions did Lanae Akar send you this morning concerning treatment of this Phyladian?”

“This morning?” The Lanae was puzzled. “None, my lord.”

“You are Lanae of the guard?”

“Yes, my lord.”

“Then you lie!” Brewster snapped. “Free the Phyladian.”

“But he—”

The Lanae mumbled the order fearfully, and the guards assumed a new, tense watchfulness as the green-skinned giant was unmancled. Poro gently laid the heavy weight down and stood quietly.

“Order the guard changed and all who were in the palace on duty for the past night and day are to report to Lanae Tuew presently.”

Again the Lanae gave the order, and the guard filed out.

Brewster said to Catu, who stood close by, “Summon a picked patrol of my best warriors. This Lanae and all his officers are to be put under arrest and—”

“My lord, it was not—”

He fell silent under the black fury of Brewster’s eyes. “There will be time,” Brewster said evenly, “to judge your guilt or innocence later.” He turned back to Catu. “They are to be kept incommunicado,” he said. “Keep them separate from each other, allow no talking among them and they are to
see no one, nor to send or receive messages. This duty is entrusted only to men of my command."

Silently the Lanae and officers of the guard were led out. When Brewster looked around at his staff officers, he saw that none understood what they had witnessed—as he well knew by then, for understanding it they might have interfered. Now he addressed them.

"I see, my officers, that your thoughts are all with the events taking place in Ho-Tonda. The warriors of Thyle belong beside those of my brother Jevs. Therefore, it is my order that you, under the leadership of Tuew, present yourselves and your regiments to Jev Eblis for his disposal. This accomplished, Tuew will return here to await Akar and myself."

Tuew was confused. "And who will remain here?" he asked, looking at Poro distrustfully. "And what of your—"

Brewster said quietly, with finality, "Akar has arranged all." He nodded for them to go. "I am not one to fear a brute—" he grinned scornfully at Poro, "—I have bested with my own hands."

By the look that crossed the faces of Tuew and several others he knew they had heard of his fight with the Phyladian, and now understood that Poro was that Phyladian.

"Nevertheless I will post a special guard," Tuew said, and left at the head of the other staff officers. One by one they went out, some casting a last look back, others hurrying, until in a few moments they were all gone, and Brewster was left alone in the semi-darkness of the great chamber with Poro.

Brewster regarded the Phyladian, then said softly, "You speak my language of Kren?"

Poro nodded and put a finger to his lips. He moved with agility surprising for his bulk, walking swiftly to each of the four entrances to the central chamber and looking into the adjoining rooms. Then he returned and dialed the Sinju, and the screen swept across the city to a plaza surrounded by enormous buildings. One of these buildings was lost behind the streams of green fire that was being played on it from huge Nastrand guns. The Jeggites were attacking it in force.

Poro glanced at the scene and turned the Sinju off.

"They have found our Konos," he said in English, his deep voice hushed.

"We must go to him before it is too late. Only he knows what is to be done now."

"But how can we go there?"

"You have done well thus far. Confuse your warriors further and order a patrol to take you there. You must continue to use your power while the Jevs are occupied." He started, listening to some sound he had heard, then said, "You have disposed of Akar for a time?"

"For a long time," Brewster said somberly.

"Good. Let us go then. And remember to answer no questions but show your might instead. To these people you are a Jev."

Brewster cursed bitterly and left with him.

* * *

The military escort flew in a wedge, high over the embattled towers of Ho-Tonda, and in the protecting flank of their formation Brewster drove his own tyar. Beside him sat Poro. Brewster had carefully made sure every communicating instrument was functioning only one way—from the others to him
—and then he spoke to Poro. He could hardly arrange his thoughts; a thousand questions clamored in his brain. Poro could not answer them all.

"I knew immediately it was you who freed Abbott," Brewster told him. "It was the only thing that made sense. I found that note telling me to go to the Imperial library and it couldn't have been there long or it would have been found—they searched my things regularly. The only one in the wing was you. You were practically telling me it was you but I couldn't take the chance, even after I found you watching me reading that book. Suppose you were a decoy?"

"But why should you have thought that?"

"I wasn't sure of anything anymore. Everyone was turning out to be someone else. The Jeggits had proven to be so fantastically clever that I just couldn't tell. I knew one mistake might be the end. Of all the planted coincidences I'd been maneuvered through, I had caught only one—the one with Vrita. Then I saw that your being in the palace, in the Krennian wing, wasn't the accident I'd thought it was. I remembered you had unobtrusively picked that fight we had—"

Poro smiled, and with his smile the dullness of his eyes lifted, as under a veil, and then he was again the stolid, stupid Phyldian. "It was a calculated affair," he amended. "I had been instructed better than to pick the fight. I was merely to offer the excuse, and I was assured you would seize it." He nodded reflectively. "From the very beginning he understood your nature and predicted many of your reactions."

"Thank God," Brewster said fervently. "He was playing against a gang who knew me pretty nearly as well as he did." His face was bleak and drawn.

Poro said, "So you reasoned that I had been sent to get to you?"

"Not all at once. You see, there was a hole in it. What if I hadn't caught on that my bodyguards meant to kill you? What if I hadn't cared if they did? For an emissary, your case had certain coincidences for it, but as many against it."

"You overlook one thing. Had you not seen that your guards were ready to kill me, or had you not cared, nothing more important than my death would have occurred. True, I would have failed as an emissary, but others in a variety of guises would have attempted to reach you. The very nature of your position was such that any attempt to draw you into contact would necessarily have to be the result of some coincidence."

Brewster nodded. "I saw that later, but this morning when Akar told me Abbott had escaped, my first idea was that Akar had killed him. When he told me the details, I understood it was true and that you must have been the one who engineered it. It was absurd to think of Konos, as Akar said, getting in here. Then who else could have killed and beaten a large guard? Only Poro, the quiet Phyldian, wandering unnoticed from room to room, had the freedom of action—only Poro was here—and he alone had the strength to overcome so many men quickly. And yet, even here I had doubts... I had them until the last moment, until you answered me..."

"You could not understand what nature of being I was?"

"Yes. Suba Marannes had told me of the Bheynor, the offspring of intermarriage between Estannars and those of other races, who look like Estannars and still retain the power to lie. But you did not look like an Estannar, and you acted with an intelligence that I"
A deep sigh escaped Poro. "I, and the beings like me, have been one of the Estannars most carefully guarded secrets until today. We too are the products of intermarriage, but we are Bhey nor in reverse. We resemble those of the other races, but retain the intelligence of the Estannar. Our beings are called Temhor, which means, in the ancient language of Estannar—promise for the future. For more than a hundred years we Temhor have been bred scientifically, and in us the Estannars see the people of the future, the interbred racial being, combining the best features of all." He paused. "But you could not know this, naturally, and we understood the obstacle would be great."

"I had to gamble on some kind of explanation," Brewster said. "Everything else pointed to it. I kept saying to myself 'inexorable logic, inexorable logic' when there was no logic to so much of what had happened. I had to take the chance even if I was wrong, because unless I was right about you, I would lose perhaps my last chance to contact the faction that held Abbott." He regarded Poro. "You explained it all to him?"

"As much as I had time. He left on foot, and the last I saw of him, he had gained the second wall. Certainly he would have gotten through to the others and warned them that you would come of your own will—but then the mass arrests started. I do not think he got past the cordons. They were already on guard early this morning."

"Then there's no hope for him?"

"Perhaps. He may have been arrested as an Estannar. The warrior patrols were ordered to kill none who did not fight. Only the Konos offer resistance. For the rest, it appears that the Jews have found out about the many Temhors in the city."

"But how?"

"Panic, perhaps. You have seen the Sinju and you know what is going on. Did you not notice that many of those who sought to escape do not look like Estannars? Some doubtless are innocent Usaus, Anians, Ermosians—but many others are Temhors."

"But why do they run? They're giving themselves away—and if they're as intelligent as you . . ."

"They are not as fortunate as I, who was chosen to work with him. They know only that they have lost contact with each other. Our strength lay in our organization, and the arrival of great numbers of Konos broke that organization to bits, for the Konos have been killing recklessly for days, trying to get through to you. Accidentally they must have killed many members of our groups who were also trying to get you in contact, in case I should fall by the wayside. That was his precaution."

Brewster shook his head. "I still don't understand much of what you're saying. It can wait a little, but one thing does seem to be clear—that tremendous things have been in preparation here, and that suddenly everything has been let loose."

"Yes," Poro agreed, "the preparations have been ready here for a great many years, but much of what is happening now is not the result of those preparations—it is a series of desperate moves meant to head off your collaboration with the Jeggites, utilizing those preparations. It is as if one had stored munitions for a long planned battle and then had to blow everything up, to hold the enemy back, because the enemy had struck first. The Estannars are wrecking the plans of many years just to gain a little time now."
“I see,” Brewster said. A heavy, involuntary sigh escaped his tight-drawn lips. “What a tragic waste,” he said quietly. “Here we were trying to get through to them and they destroyed every means we could have used. And now they’re destroying the things we’ll need later . . . if there is to be a later . . .”

Poro was pointing below. Their squadron of tyars had left the city and its environs not long before. Now they had approached the outlying state farms of the nearby Toctai province. Along an intersection of three roads below was the grouping of neat rectangles of white buildings that Brewster remembered. The escorting tyars ahead were already dropping.

“Now we will see him,” Poro said. “He has expected much of this for many days. He has not lost heart. He will know what to do.”

MANEUVERING the tyar into a long shallow glide, Brewster wondered. He had realized before that he had been no more than a tool in hands far more skillful than his own—or, in the imagery he had created, he was not the player of the cards, but a card himself. A valuable one, to be sure, and perhaps the most valuable of all, if he could be played at the correct time. He was a loose Ace. He might be trumped out, or, if his own player called first, he might be made into the Ace of trump. But it was not in his hands now . . .

Suddenly his thoughts turned to a new channel, and Brewster saw that everything had inevitably led to it, to the question he now asked Poro: “But what if the contact with him has also been destroyed—” He broke off, seeing that Poro had been expecting the question.

“It is undoubtedly destroyed. To hope otherwise after these mass arrests would be foolish. Instead I have hoped that the Jeggites do not yet realize what has happened.”

“The contact was through an Anzus?”

Poro looked at him and smiled briefly. “Yes,” he said. “It was very intelligent of you to see that. I can understand now why he insisted that you had to be taken in as one of us.”

One by one the tyars landed in a precise column along the apron of a field, flagged into position by Hruthians. The last time Brewster had been here, the field had been supervised by Argyres. Their conspicuous absence was mute testimony to the demands on military power that had been necessitated by the operations in Ho-Tonda. How much stranger, then, the fact that none of Thyle’s army had been requested.

Getting out of the tyar, Brewster, accompanied by Poro, spoke a few words to his patrol captain, ordering a clearance from the field. The captain soon returned with word that it had been granted by the old warrior in command of the few Argyres within the central building. Then Brewster told the patrol to wait at the field for him, and went with Poro and one of the patrol warriors.

Entering the unguarded main square, Brewster kept thinking that Providence was still with him. The Jeggites evidently attached little importance to the area or to him. How simple, with a pliable communications system, it would have been to storm the place with suddenly gathered Konas. Yet here it was, open to attack, guarded by a handful of poorly armed Argyres. It was even possible that a simple bluff would do the trick, if it was necessary.

They were challenged only once, and after that the full guard assembled for formal salute. Accompanied to the
medical staff chamber by the commanding officer, Brewster recognized the taciturn doctor he had met on his first visit. He spoke to the doctor for a few moments.

"How is he?" Brewster asked.
"No change, my lord."
"When did you last see him?"
"Yesterday. I'm due now. With your permission, my lord, I'll go with you."
"I prefer going alone. I'll send for you presently."

The doctor seemed glad to be relieved of what he obviously considered an onerous duty. He bowed and left. Brewster motioned to Poro, and together, led by a Hruthian orderly and his patrol warrior, they walked down the spotless green marble hall of the hospital. An oppressive silence lay over this building, as it lay over the entire settlement. It seemed pitifully under-staffed. The rooms which Brewster glimpsed were all filled with patients, and now and then their murmurous complaining voices would drift into the corridors filled with male and female Hruthians, orderlies and nurses, but of the Jeggian doctors there were few to be seen. The hospital area here was equally distant from Ulatai and Hontoda, and Brewster estimated that the first flood of casualties from both cities had been brought here. But where were the doctors? Had they been ordered to the combat zones? Then how great had the impending battle grown?

A FEW moments later the orderly stopped outside a door guarded by two Argyres. Brewster motioned his patrol warrior to wait outside and told Poro to enter with him. In every face Brewster had seen the wonder that followed his appearance with the silent Phyladian. Only his pre-eminent rank had forestalled the questioning that might otherwise have risen, and again, as it was to occur many times that day, Brewster remembered his words: "...if you lend someone one of your toys, he may find a use for it..." and a vast gratitude that Stevens too had banked on just that, filled his heart.

Brewster closed the door behind him and walked to the bed where Dr. John Stevens lay. He had not changed. The jaundiced, scarred face was expressionless, the gnarled hands trembling. The eyes that Brewster remembered as sightless yellow pools were closed now, and his deep, slow breathing was testimony that Stevens slept. But when he had quietly opened the door, Brewster had seen the old man close his eyes, and he conveyed the information to Poro with a shake of his head.

Poro nodded understandingly. He leaned over the bed and whispered, "It is I, Lau of the Anzus group. Brewster and I are here alone. If you hear me, open your—"

Before he had finished speaking, Stevens' eyes had opened. He did not move his head, however, and to meet his gaze Brewster leaned over beside Poro. He was shocked by the clarity, the fierce intelligence that lay in Stevens' eyes, and when, a moment later, Stevens began to speak in a well-controlled murmur that did not carry beyond the bed, a shudder ran through Brewster. It was like a voice from the grave. Prepared as he had been for something like this, the actuality of that soft, ghostly voice was almost too much.

"The Anzus is gone. Of my three doctors, two have been called and the last may go soon. You must hurry while there is still confusion enough to allow you freedom. Commandeer a warship and start for Usau. Allow as small an escort as possible. Do you understand?"
Brewster was not sure that he understood, but he said, "We can take you with us. It will not be difficult—"

"It has never been difficult. You must go alone, Nick. Do not try to save Abbott or the Marannes people. You must go quickly or it will be too late. Poro will explain everything." His eyes moved the least bit to focus on Poro. "I sent Kari to Ulatai yesterday. The work in Ho-Tonda is his doing, as are the warships off Usau. When you get through, tell Tartullian that Brewster may call the force-wall off. He will understand. All my plans have been based on it, and the men lost in Ho-Tonda will aid its realization."

He closed his eyes. For all the clearness and control with which he had spoken, the few words had exhausted him. Brewster looked down at his quiet form and a dim realization of what Stevens was prepared to go through from now on came to him. Perhaps because he was still uncertain or perhaps because he knew it was not for him to question, Brewster knew also that he could do nothing with or for Stevens.

But Poro had been right. He had known what to do.

Silently Brewster and the Phyladian left the chamber. They returned to the field where their tyars waited, not a word exchanged between them there or in the tyar on the way back. Poro had shaken his head, afraid that the communications system had been tampered with. And now, at the critical hour, it was imperative that no inkling of the mission Brewster would shortly undertake, should leak out.

Once back at the palace, however, and secluded in the privacy of the Krennian chambers, Brewster quickly pieced together the fragments that had invisibly bound Poro and Stevens and the others whom he had not known, and whom Stevens had mentioned.

"I haven't got it all yet," Brewster told Poro. "Let me talk it out as if I were thinking aloud and you'll help me."

Poro shook his head. "There is much you know that will be beyond me. Many of my actions have been based on instruction or faith, but in those matters concerning him, I can be of service." He stood before Brewster, waiting. "I must beg you to be quick."

"I've got a reason for stalling," Brewster said quietly. He lit a cigarette and drew the smoke into his lungs and watched the plume he blew out, frowning and meditative. Then he nodded and began to speak.

"Stevens knew what was happening to me and he built his plans on the expectation of my reactions. Now, from what he said, it appears that he could have been taken away from there by the Estannars, but chose to remain there as a voluntary prisoner?"

"Partly so. The Estannars could have taken him in the raid when they rescued the other three survivors of the first ship from Kren. But since he was already under the influence of their Anzus, the Estannars decided to leave him behind, hoping he would consent to act as their most necessary link between them and their agents in Jegga. And he did so consent."

"I see. I'll put it this way: there were Estannars in Jegga when the survivors of the first Trailblazer were brought here. These Estannar agents had an Anzus?" He paused.

"From time to time many Anzus have fallen into our hands, as have many of the weapons of the Jeggites. It was inevitable that such exchanges of trophies should occur between warring nations. Just as the Jeggites captured many of our military secrets, so did we capture theirs. When it was
known that the Jeggites had taken live Krennians, the Estannars knew that the Krennians had to be taken away before the secret of metal manufacture was forced from them.

“But the Estannars knew also that one day more Krennians would come to Boron and be captured by the Jeggites. They prepared against that day, and foreseeing the possibility of failure on Boron, they built a great underground organization here in Jegga. For the first time they used beings like me, the Temhor. We were taken from our secret lands in Estannar and sent in groups to establish ourselves in Jegga. We all had different assignments, and mine, fortunately, was to be a member of the Anzus group, among whom I was known as Lau.

“For, from the beginning, because Dr. Stevens was injured and was under the care of Jeggian surgeons, it was decided to try to establish him as the link. We set our Anzus within range. It was brought to the fields near the great hospital settlement, and its hypnotic power brought to bear on Dr. Stevens. He was still unconscious during those early days, and to the knowledge of the Jeggians, he scarcely improved. For we controlled his mind and his actions. Through our Anzus we were able to transmit our thoughts to him. What others of your people had learned from the most cruel experience, Dr. Stevens learned from us.

“It was not necessary to control his mind after those early days except to defend him against the Jeggians. We had kept his eyes clouded and his arms trembling, and though his mind was clear he looked still a dying, hopeless cripple. But to prove our side—for we had told him of the Jeggian plans to conquer Kren along with the rest of the universe in their hands—one day we released him from the influence of our

Anzus. The improvement in his condition was immediately noticeable to his doctors, and that day he was subjected to a merciless grilling, until our Anzus rescued him. As it was, its influence returned none too soon, for the Jeggian doctors had sent for an Anzus of their own.

“It failed, because ours already occupied the field of his brain and he was saved. They kept him alive, hoping against hope. He was their only link with the secret of metal. In time, because the Estannars made no new move to get him, the Jeggians decided we too realized he was of no use to them, and were thus further convinced. But all this time he was in contact with us, directing us, counselling, keeping the contact alive among the various sections of our arriving Temhor and Bheynor and Konos. Why all this went on we did not know, save to realize that our leaders were planning an eventual blow here in Jegga itself. Our strength was growing steadily—”

BREWSTER interrupted. “I can see how you could keep in touch with him through the Anzus—at least I think I can—but I don’t see how he got through to you. As far as I know, the Anzus works one way—from its controller to the controlled.”

Poro smiled faintly. “He spoke to us. We had three Temhor doctors on the staff, two who appeared to be Darzitz and one Usau. In the course of their duties they occasionally visited him. Whatever we told Dr. Stevens through the Anzus, he could tell his three doctors and have it passed along by them to their own groups.

“I was of the Anzus group, and there were five of us. We lived on a great state farm near the hospital settlement. Three of us were, like me, Temhor-Phyladian, but as apparent
Phyladians were highly desirable as farm laborers. We three kept the Anzus in our fields and transmitted to Dr. Stevens whatever orders were given to us. The orders came from the other two of our group; one, a Temhor-Anian, was the head of the farm; the other, a Bheynor, was his assistant. We never knew where they got their orders, but undoubtedly there were additional links all the way through to the leaders in Estannar.

"Thus, group on group communicated, and it all went through Dr. Stevens. But he was more than a central link. This I discovered when I was ordered to attempt getting into contact with you. Dr. Stevens had been sending you notes—"

"Then it was Stevens!" Brewster said, startled. "It seemed to me that it had to be Stevens, but I heard an Estannar deny it . . ." He let his voice die away, seeing the answer. "But of course no Estannar would be allowed to know it," he said, as if explaining to himself. "That would be inviting disaster."

"More than that," Poro added, "the Estannars—all who came in contact with us—were purposely misinformed. Only we Bheynor and Temhor close to Dr. Stevens knew the truth. He wrote the notes and had them delivered. Before me there had been several Temhor-Hruthians in the palace who were links. The Argyres discovered them—without discovering the secret of the Temhor—and destroyed them. There were others too, scattered among shopkeepers, tyar-drivers—we even had a bearer to a Lanae in the army of Jev Nastrond. My task was to get into the palace in a capacity where I could deliver Dr. Stevens' notes, which were given to me by a gardener.

"But I knew all along that there was a division among us. Our communications had been broken all along the line. From the time you of the second Kremnian ship arrived, the Jeggites killed thousands on the slightest suspicion. Shortly after I came to the palace I learned that both the Bheynor and the Temhor-Anian on our farm had been executed because they were known to be friendly with the Marannes family. It meant the end of our contact with leaders in Estannar until new ones could be established with us.

"But it did not affect Dr. Stevens' ability to send his own messages through his three Temhor doctors. The two Temhor-Phyladians on the farm remained unsuspected. Thus they were able to keep Dr. Stevens under the Anzus influence, releasing him for short periods sufficient to enable him to talk or write a note. Naturally, because the danger was now infinitely greater, these free periods became less and less, and the notes decreased in frequency—"

"Did you ever deliver any notes to Abbott?"

"Twice. Secretly, of course."

"You were able to read them, I gather?"

"Yes."

"Did you ever notice the difference in the way the notes were worded?"

"Naturally, but you must understand this by now?"

"You mean he was playing on my personality."

"Yes," Poro nodded, "from the very beginning. The notes Dr. Stevens sent to Abbott were all factual. He merely told him to look in certain places, knowing that Abbott was already predisposed to accept the evidence. It was different with you . . ." Poro spoke gently, with no intimation of censure. " . . . You thought along
different lines, and it was Dr. Stevens’ opinion that you had to find out for yourself, no matter how long it took. Therefore the notes he sent you were meant only to pique you, to make you think a little, to wound, perhaps. He played on your personality, as you say, because he believed that you would find whatever evidence was needed once you decided to look for it...

“And when I became the so-called Jev Thyle?”

Poro frowned. “It was a shock. You see, until then Dr. Stevens had held out hope. This new, incredible development appeared to have changed everything. He knew of the Konos who had been sent to kill you—the ones discovered in the Marannes quarter—and he had sent his own message through to the Estannar leaders that no such further attempts were to be made. Now he was puzzled. He sent one last note, which I put into your cigarettes when you returned to the palace as Jev Thyle.

“I saw you reading the note, and I saw you go to the Imperial library, and, if you recall, I watched you read that section in Descoru es Jegga jon Jev. I reported this through to Dr. Stevens, and after that, no matter what you did, he was certain that it was meant eventually to hurt the Jeggitites.”

“Even when I gave the Jeggitites the secret of making metal?”

Poro nodded. “We had a Temhor-Darzit among the scientists who later gave your report to one of Dr. Stevens’ doctors. Dr. Stevens, too, knew the metal processes and he saw the errors you had committed. But all your errors were in the end processes, and this told him that you were playing to gain time—”

“I was trying to contact some element of the rebels. I was still afraid to try you, Poro, and I had guessed that Abbott’s constant disappearances were linked with the rebels. I needed time until either Abbott showed up again or someone else contacted me.”

“Ah yes,” Poro said, “but since Dr. Stevens had no contact with them, they had no way of knowing that you had lied when you supposedly gave the secret away. They could only see the huge manufactories begin to function. To them you had been an outcast but now you were the lowest of all traitors. Thus, I was not surprised when Abbott was brought to the Krennian wing this morning under arrest as a conspirator in an attempt on your life. I killed his guards and freed him, and then I told him that you had read the Descoru and now understood everything. And it was his intention to bring this news to the Konos factions with whom he had been in contact. But I did not think that he had gotten through, and from Dr. Stevens’ warning not to attempt to rescue him, evidently he was arrested.”

“What about the other things he said?” Brewster asked. He had smoked three cigarettes, lighting them end to end. But a strange vigor ran through him, as at last he was beginning to understand so many of the things that had plagued him. “What was that about sending someone named Kari to Ulatai yesterday?”

“I perceived from that,” Poro said thoughtfully, “that I had been in error on some of the things I told you previously. Kari was leader of a special band of Konos kept in Ho-Tonda for Dr. Stevens’ use. They were a fairly large band, numbering several hundred at times. Because their only contact with the Estannar leaders was Dr. Stevens, they could not be used against you—thus special Konos had to be sent in. But last night Dr. Stevens sent Kari to destroy the forces at Ulatai. The Jeggitites were already far advanced on some samples of the metal, and it was
imperative to delay them, or they would discover that you had lied."
"Then it was an action calculated to give me time?"

"OBVIOUSLY. And now, from what Dr. Stevens said, it appears that the action in Ho-Tonda today was touched off by him. Kari and his Konos forced the Jeggithe to a position where they could retain order only by some such gigantic upheaval as arresting all Estannars. Once this happened, evidently Dr. Stevens' orders and not panic, as I supposed, sent our Temhors fleeing with the Estannars. Thus new confusion is added and even innocent members of other races are joining the stampede to escape from Ho-Tonda. All this will keep the Jews too occupied to know what you are doing and meanwhile you can make your—"

"But what of Stevens? He said the Anzus was gone, and two of his three doctors gone. Where does that leave him?"

"In a dangerous position, as he well knows. Something must have happened to the two Temhor-Phyladians who kept the Anzus, and Dr. Stevens is no longer under its influence. His doctors have doubtless been among those called to attend the wounded in the fighting in Ho-Tonda, for the Konos there would not submit without inflicting great damage. But while one of his doctors remains, Dr. Stevens is safe."

"And if he leaves?"

Poro shrugged. "They may see the change in Dr. Stevens or they may not. Perhaps he will pretend to sleep, as he did when he heard us come in. In any event, he has weighed the consequences and made his decision. Evidently Kari was able to contact a group of Estannar warships off Usau. Your one hope is to get through to them, and to bring to Tartullian, a great Estannar leader, the message that may call the force-wall into abeyance."

"As a Jev?"

Poro nodded and kept his expression unchanged.

Brewster looked at him and said, "You think I don't know?"

Poro said nothing. A look of keen interest came into his eyes.

"I've known all along," Brewster said. "It wasn't reading the Descor that did it. If Stevens had thought merely reading that book would do it, he'd have gotten it to me earlier—or something like it—"

"But only as Jev could you have gotten into the library," Poro reminded him.

Brewster nodded. "All right, but reading those passages in the Descor did no more than confirm what I already knew."

"But how could you know?"

Brewster countered, "How did I know Dr. Stevens was probably under the influence of an Anzus?" When no answer came from Poro, Brewster said, "Because I saw evidences of the division of command all through the actions of the rebels. One group tried to kill me—another sent me notes. If you were delivering the notes, as I finally concluded, then you also had the opportunity to kill me. Why didn't you kill me? Obviously because your faction didn't want you to."

"Again, there were things you don't know about. Akar told me that others of my men from the Trailblazer had gotten notes. He didn't know about Abbott or me, but he knew about them. Why? Because one faction used good methods and went undetected—that was your faction. But the other group, which I assume is headed by Harper, Crane and Burke—the survivors of the first Trailblazer—sent notes poorly and were found out. Which was clear evi-
vidence of a badly divided system.

"Everything kept pointing to Dr. Stevens. I had seen him and it seemed unbelievable. But two things convinced me. The lesser of the two was my own experience with an Anzus. I saw then that it might easily control one's every action, however involuntarily. Still, as I say, this was merely a confirming factor—something I deduced from the fact that major evidence pointed to it."

"And this major evidence?" Poro asked.

"The fact that I understood what lay behind my becoming Jev. I saw then, once I appeared to be a Jev, that the faction that sent me the notes still let me live... and I realized that whoever was behind it had banked on my realizing everything sooner or later. It was a tremendous gamble on my intelligence and there was no one—" he spoke somberly, "not even Abbott, who would have done that except Dr. Stevens. He alone knew me well enough to hope—to know—I would see through it all."

PORO shook his head. He said quietly, "I see from your words that you have indeed realized the underlying farce, and though I see it and know Dr. Stevens' high estimate of you, it still seems incredible that you saw it by yourself. . . ."

Brewster said grimly, his face suddenly flushed, "I'll go into the details some other time. I'm not proud of them. But you can have no doubt that I knew. Otherwise I would not have kept the amber stones and thrown away the Anzus eye." His smile was cold and empty. "I had a use for some of their toys, you see."

"And will have again before this day is through."

"Yes," Brewster agreed. "There's a lot to this being a Jev and I'm going to squeeze it dry." He paused meditatively. "But even though there are hundreds dying in Ho-Tonda," he said quietly, "this was probably the only way. . . ."

"No," said Poro. "There were other ways, but after what has happened, this will be the shortest, if not the best, way. The great and learned Tartullian will show you. And now we must hurry, if you are to get through to him."

Brewster ran his hands down on his face. "I've been thinking," he said. "I've got one or two things I ought to do first." He looked at Poro. "They've got Abbott and the Marannes family. I'm going to get them out before I leave."

"You must not—"

"I don't care about the time. I know the Estannars captured the other six of the Trailblazer and they're safe—but just in case they aren't—and because Abbott and the Marannes family are blood on my hands, I'm going to wash clean."

"Think," said Poro. "It is not a question of time. You are to return here and still be the Jev Thyle. You must not burn bridges you will later need to cross. Everything must be left untouched, no matter what the risk, for in meddling with the Jevs you show them you know what they plan." He smiled regretfully. "Do you think they would want you to deny them the danger they all undertook... the danger in which you had to leave Dr. Stevens?"

Brewster said through tight lips, "You're right. But not all the way. We'll split that up: you'll go."

For an instant Poro looked at Brewster, then he nodded his head slowly. "You've gotten ahead of even Stevens, I see."

Brewster grinned momentarily. "Even Steven... that's good, Poro, if you knew it." He knit his brows re-
PORO stood silently, his eyes fixed on Brewster with what was certainly nothing but wondering contemplation. It was helpless contemplation, too; as though he realized, just as Stevens had, that Brewster must follow his own line of reasoning. And it was apparent that suddenly a new line of reasoning had been reached, followed, and measured to a decision.

“What if Tartullian’s plan doesn’t correspond with yours?”

“You don’t know my plan,” said Brewster.

Poro shrugged. “You don’t know Tartullian’s—nor Stevens’?”

“Stevens knows me,” said Brewster calmly. “He knows me so well that there is but one line of reasoning he can follow. Only one way he can convince me that my place is here. Well, let’s say I’ve skipped a step in his reasoning, and I’m convinced now? Then what?”

Poro looked at him. “You stay here.”

“Exactly. But Tartullian can’t know that. And he’s got to know. So there’s your answer. You go to Tartullian.”

“How?”

“Just as Stevens directed. He must know why he planned it that way. I’ll see that you go according to plan. A small ship—and a Jeggite warship convoy.”

“That means a fight.”

“Now you’re catching on,” said Brewster with a grin. “And if it means a fight, it must be because both Stevens and Tartullian want one—and if they want one, they must be ready for one. And if they’re ready for one . . . Do you follow me?”

Poro’s eyes gleamed. “The inner city!”

“That’s what Stevens and all Estan-nar have planned. Crack that, and you crack the whole set-up. What was it Stevens said: ‘Tell Tartullian that Brewster may call the force wall off?’ He meant can call it off, not may.”

There was blankness in Poro’s face. Brewster noted it, half-smiled. “You see, Poro, I do know an answer that you, anybody else, doesn’t. Except perhaps two: Stevens, and . . .”

“Time is growing short,” Poro took up after his deliberational pause as though despairing of understanding; even realizing here was a secret almost revealed, then held back. “What message do I give to Tartullian when I ‘meet’ him?”

“Tell him that Brewster has called the force wall down.”

“Nothing else?”

“Nothing—except to hit hard and fast. And on time.” Brewster looked reflective. “The time . . .” He launched into a series of verbal calculations, and except for a few inter-spersed corrections, Poro listened silently. When Brewster had finished, Poro’s eyes were shining. The giant Phyldian strode to the window to stare toward the center of the city—toward the inner wall. His clenched fist rose, then fell with an unmistakable portent.

“Hard and fast!” he swore.

CHAPTER XI

FOR two days Brewster remained calmly in his quarters. Much of the time he spent sleeping; some of it in contemplation of the last remnants of the fighting in the outer streets, along the Kardandan canals. Most interest-
ing was the Sinju. It showed him a scene of destruction at Ulatai. Kari and his Konos had done their work well. The blast furnaces lay in ruins, the mine shafts were blasted, and all work had ceased.

The battle had been a furious one—and sheer suicide on the part of Kari and his men. They had been slain to the last man, hunted down by detachments of enraged Jeggites. Jev Nastrond himself visited the scene, drove his armed forces to ruthless extermination of the Konos. Over the Sinju, Brewster watched his hawk face with interest.

Brewster called him on the Sinju the second day. But not before the news he had been awaiting came over the Tonju. The news was garbled, to be sure, and incomplete. Strict censorship had been clamped down, but enough had come through to give Brewster the news he wanted. There had been a battle in space between pirate Estannar ships, and the warships. There had been casualties. And nowhere any mention of the ship that carried Poro.

Brewster called the fleet commander. “I ordered a strong escort. You sent a weak one. My messenger has been kidnaped!”

“It was an unprecedentedly strong force, O Jev,” protested the commander. “Already I have reported to the Regio. A powerful punitive expedition will be prepared...”

“See that it is!” Brewster said coldly. “And report to me, not the Regio. Get that straight.”

It was pure bluff, and Brewster knew it. But he smiled grimly. Today the thing would come to a head. Today would decide the real power of the Jevs—and the most powerful of the Jevs. He fingered the intelligent firestone at his breast; thought of the anzu stone of Ahriman at the bottom of the canal where he had thrown it.

**

**

NASTROND’S lean face bore no friendliness on the Sinju. Brewster spoke first: “You’re wrong;” he said, anticipating his accusation, “Ulatai was not my doing. A bargain is a bargain.” There was no apology in his voice, rather a scarcely hidden satisfaction that he meant Nastrond to discern.

Nastrond saw it. He scowled. “Still ambitious, O Jev?” he said. “Perhaps your balance cannot match your stride!”

Brewster remained impassive. “I make the threats,” he said.

“That is presumption,” said Nastrond. “You can make no threats.”

Brewster frowned inwardly. There was a quiet definition in Nastrond’s voice that spelled an uncomfortable certainty. Certainty about what? Swiftly Brewster knew that here was a man who knew something he did not. It wasn’t good.

There was a queer tight sensation in Brewster’s breast as he went on: “The mighty Jev Nastrond also presumes,” he said softly. “He forgets the death of a man—a mighty man. He forgets, too, the existence of an imposter, and the reason for that masquerade. Perhaps it is because he remembers a law? A law that now operates on the side of his enemies; who wait to strike at his heart?”

Now at last the calmness of the Jev Nastrond was broken. His face became ugly, twisted. His eyes flamed with mixed emotions. But predominating finally, sweeping over Brewster like a wave, was hate, and murderous intention. “You ask for death!” he snarled.

“But you are not its minister,” reminded Brewster. “You will be only a member of a council of four—no, of five. In the inner city. All of us know
what we want. There is enough for all. Tonight, at the hour before midnight."

"You dare to bargain with me!" Nastrond was enraged. For an instant he seemed about to launch into a tirade, then suddenly craftiness crept into his eyes and his voice leveled out into a flatness that was so obviously sly that Brewster smiled. But there was no humor in his smile. Instead he looked squarely into Nastrond's eyes.

"Remember the law," he said. "It is written—already written—that one hour after midnight the truth will be made known, and a barrier removed. Removed for a year! If by any untoward chance, the Jev Thyle should not emerge from the conference of Jevs tonight, in time to erase what is written..." Brewster paused suggestively. "That is not bargaining," he finished softly. "A bargain is such that two or more concerned have a voice in the making of that bargain. You have no voice."

Nastrond's face was white now, but he calmed himself with what seemed an incredible ability; and slowly he smiled. "At the hour before midnight," he agreed. "A conference. Then we shall bargain."

The Sinju went blank as Nastrond broke the connection. Brewster frowned. Nastrond had smiled; an enemy who smiles is a dangerous enemy. But why? What was that disturbing thing that Nastrond knew that could make him smile in the position in which he now stood?

"Damn!" said Brewster aloud, after he had turned off his own Sinju.

Brewster went to his room to sleep. But as he closed the door, he stopped and looked toward the couch with a flicker of annoyance crossing his face, to be erased as quickly as it had come. "Vrita," he said.

The dark girl's face grew tight. "You do not welcome my presence?"

Brewster advanced, stood beside the couch a moment looking down at her. She had apparently planned for the moment of his arrival very carefully. Even now, his mind surging with the plans of the coming hours, Brewster was forced to admit that she was disturbing. For a long moment he stared down, thinking. She saw his inner debate, but failed to recognize its nature.

"Why do you stand there? Am I not pleasing to you? Perhaps my hair is not well done..."

It might as well be now, Brewster thought. It was as good a time as any. He bent down, took her shoulders in both hands, lifted her face to his, and kissed her on the lips, forcefully, almost crushingly. Then he dropped her back, to lie gasping.

All at once hate flamed into her eyes. She leaped to her feet, screaming. She hurled herself upon him, fingers extended, clawing, scratching. Brewster grasped both wrists tightly, shook her savagely, hurled her back on the couch.

"I know of the others," he said coldly. "Akar... Ahriman..."

For an instant startled hope flared into her eyes. "You're jealous..." she whispered.

Brewster laughed harshly. "Jealous of a harlot?"

She went icy now, and Brewster almost shuddered at what he saw in her eyes. For a moment he was puzzled. Here again was that uncomfortable feeling that another knew something he did not. All at once it was vastly disturbing. Real alarm flooded him.

She rose to her feet, crossed to the mirror and carefully rearranged her hair; straightened the flimsy transparency of her gown, posed artfully. There seemed to be an unexplainable confidence in her; a sureness of her future
course—a course with which she toyed before embarking upon it. "You know so little," she murmured. "It is a pity, for one so intelligent—and so ambitious. Ah, that ambition! If only it were founded on something substantial; on reality."

Brewster was silent. He knew that if he spoke, the secret she was implying would become a real secret by reason of his curiosity. Instead, he turned toward the door, walked deliberately toward it and threw it open. "I want to sleep," he said shortly.

"It was you who killed Akar," she said, still engaged before the mirror. There was no accusation, no emotion, in her voice. It was as though she had merely said, "It is warm today."

He snorted. "Melodrama doesn't become you, Vrita. Please go; before I throw you out!"

It worked. Eyes flaming, Vrita turned to him, caution cast to the winds. "You are a fool, Krennian. Yes, I said Krennian; that's all you are! You think you are the Jev Thyle—do you believe that we are such fools? Do you think that we would bargain, when we can command?"

Brewster grinned at her tightly. "If you are babbling about Akar and his flaming stone, forget it," he advised caustically. "I took his stone away from him. He is no more Jev than your dead husband. Which is a point that nauseates me. A man is an idiot who sleeps among brambles whose scratch can become infected with filth—and thus be the death of him. No one knifes me in my sleep."

VRTA was obviously furious now. But once again the mysterious element of triumph superimposed her fury. It flooded over her now, sure and powerful. She laughed loudly at him.

"Husband!" she exclaimed. "What a dupe you are! I was no more the wife of the Jev Thyle than you are the Hothan! That was only a trick. A trick to give to you a Jev-ship which would keep you content. But it wasn't real any more than the Jev-ship that Akar though was his. Yes, there have been many, Akar among them. It has pleased me to toy with them. Just as I have toyed with you." She laughed in his face and went on: "Jev? You think you are a Jev? Fool! There is no more Jev Thyle. Nastrond killed him, not I. True, it was my hand that held the gun, but it was Nastrond's plan. Then, when you forced your ridiculous bargain on the Jevs, he conceived the idea to bestow a worthless title and a minor flaming stone on you to keep you quiet."

"Rave on," said Brewster coldly. Inside him a real iciness was growing. Here, before his mind's eye, all his plans were crumbling. What he had written was now a worthless scrap of paper without the authority of a Jev to back it up. More than worthless because it was the statement of an enemy. In all the solar system, no enemy had more reason to be such than a man of Kren. No Jeggite would listen to his accusations—much less would the Regio himself.

She did go on, now, the dam of triumph releasing the floodwaters of enumeration. "R-e-m-e-m-b-e-r how you learned I was the wife of Thyle? Ah! Yes, you were duped. You gave the secret of making metal in return for a worthless title. Nastrond is the real Jev Thyle. You, who believed you held two Jev-ships, those of Thyle and of Ahriman, have only one, and a bit of the power of another—power that you cannot control. Remember? You know nothing of the flaming stone, except perhaps to start that which you cannot stop! And the Anzus eye . . ."
What about the method of using the Anzus? Even if you had any Anzus to use!"

"I haven’t even got the Anzus," said Brewster calmly. "I destroyed it. I placed no trust in a gift of yours. You knew as well as I that it was the least useful of the five. I can overcome it—Even the Estannars use the Anzus. It was by no means foolproof."

Vrita lifted her eyebrows, then she laughed. "That leaves you with no power at all." She walked up to him, pressed her body tight against his, lifted her lips and kissed him warmly. Then she turned to the door. "Charity is good for the soul," she mocked. "Goodbye, Fyavo!"

"Just a minute," Brewster said. "I have a few things to say."

She stood with her back to the door, waiting. "Go ahead," she said with a careless toss of her head. "But make it brief. I have use for my time."

BREWSTER sat down on the couch, took a cigarette from his pack and lit it deliberately. Then he blew smoke in her direction and looked through it at her mildly curiosity-tinged features. "I just talked to Nastrond," he said casually. "Arranged a conference with him and the other Jews and the Ho-Ghan for tonight. In fact, in a few hours, now. The proposed discussion might interest you, since you have a stake in Nastrond—the same stake, I presume, that you had in Akar, and Thyle, and myself." He paused, eyed her reaction to the insult.

She looked scornful. "You were not unwilling," she retorted.

"Back on my own world I eat ice cream," he said, "because it tastes good. You have a certain flavor, like fruit. The only trouble is that you are rotten to the core."

"Have your say!" she snapped harshly. Her eyes glittered with hate now.

Brewster grinned at her. "All right. I’ll make it brief. In plain words, I informed Nastrond that, as the Jev Thyle, I would call the force wall down tonight at one hour past midnight. I can do this, because I know something you obviously don’t, that the Ho-Ghan is dead, murdered by the Jews, and that the present Ho-Ghan is a fraud." He ignored her gasp of utter surprise, went on: "To insure my own safety, I arranged to have a message delivered to the Regio, ordering the force wall down if I do not emerge unharmed from the inner city."

Vrita looked at him a long moment as he stopped speaking. Then she spoke, the inferences that had followed one another in her mind emerging as words. "You must be a fool. You know, of course, that you will not leave the inner city, once you go into it. You know also that your message to the Regio will be worthless, once he knows you haven’t the power to call the force wall down. And you know, too, that Nastrond knows you are not a Jev. Further, you know that I know."

Brewster carefully extinguished his cigarette by grinding it into the carpet beneath his foot. "Certainly, I know all that," he said calmly.

"Then why do you tell me of this ridiculous plan for a meeting, and of your foolish threats?"

"Don’t you know?" Brewster lifted his head and stared straight into her black eyes.

"No. I don’t."

He got to his feet, walked slowly toward her. "I intend to go through with the plan. In short, I intend to bluff it out."

"That’s silly!" she exclaimed. "You are more of an idiot than I thought. You can’t bluff anyone. Even I..."

Brewster said: "I’ve never killed a
woman before."
Her face went ghastly white. For a startled instant her eyes met his, saw the truth in them. Then she whirled, tore at the door in an attempt to get it open and flee through it. But she was too late. He caught her shoulders, turned her around, pinned her against the door. Her terror-filled eyes glared into his, her lips writhed with a scream that would not come.

"This is war," he said. "War between my world and yours. And because my world doesn't know it's behind the eight ball, I've got to act in its name. And so, right here and now I declare war on Jegga. Unfortunately, I constitute the only Earthman on the fighting front. It's Earth or Jegga; and if you leave this room, it will be Jegga."

* * *

DARKNESS, and a semblance of order, the first in several days, lay over Greater Ho-Tonda like a soothing blanket. Nick Brewster piloted his own tyar low over the rooftops, heading toward the inner city and the gateway where admission was possible, operated from within. Here a gateway could be opened in the force wall, on signal.

It was still several miles to the inner city wall, just beyond which was the invisible and deadly force wall, with its constant circle of dead birds marking its boundary.

Below were the city streets, narrow and crooked here, and practically deserted except for patrols of Jeggite soldiers. Just ahead, marching rapidly down a narrow street, was a platoon of soldiers; and in their midst walked a captive. He was tall; looked like an Estannar. But suddenly Brewster dipped his tyar lower, eyes peering down intent on the captive's head. If that wasn't Joe Abbott's familiar shock of tousled hair . . . !

Before Brewster could make certain, the soldiers halted beside a building, turned inward, vanished. Hurriedly Brewster brought his tyar down in the street, stepped out of it. He ran toward the building, which stood under the looming shadow of the great stone wall surrounding the inner city. There he stopped short, frowning. Facing him was a blank stone wall with no doorway visible anywhere in it.

He advanced, examined the wall closely, looking for cracks that might indicate a secret entrance. But there was none. Experimental pounding on the wall revealed no hollow sound. The walls were solid as Gibraltar, or very thick. Nothing here but cold stone. Brewster growled in annoyance, looked up and down the deeply shadowed narrow street.

It was quite possible that the party of guards and their prisoner could have made their way through these shadows and out of the street, while causing him to believe they had entered a doorway that it was obvious now did not exist. He shrugged and turned back to the tyar. That must have been what really happened. But had their prisoner been Abbott?

Again aloft, Brewster scanned nearby streets without success. No marching soldiers were visible. More than half convinced he had been victimized by his own wishful thinking, Brewster resumed his way toward the entrance to the inner city. If there had been a prisoner, the chances were thousands to one he had been an Estannar. No prisoner as important as Joe Abbott would be dragged through the streets at night in such an unceremonious manner.

Nearing his destination now, Brewster's realization of the colossal bluff he was about to put up broke over him with growing conviction as to
its million-to-one chance for failure. Nastrond knew the secret. Nastrond had no reason to fear him, because he was not a Jev and in no position to carry out his threat to call the force wall down. And Nastrond would see to it that when his message reached the Regio, the truth about his status would also reach him. The least that could result would be an investigation, which would take fatal time. And time was the essence of victory for the Jeggites now.

Out in space the cat was out of the bag. The Jeggites knew now that they faced an enemy with ships—but they also knew that that enemy’s hand had been forced, and that eventual victory was theirs. Only one thing could smash the Jeggite power, the smashing of the inner city, the death of the Jeffs, the elimination of their amazing powers. And that would not happen unless the force wall went down before Tartullian arrived to attack.

Tonight! Just between midnight and the dawn, the attack would come. And Tartullian’s fleet would come to its doom, unsuspecting, trusting in him, to lie in shattered wreckage at the foot of the force wall, just as unwary birds lay there, victims of the irresistible force that made the wall impregnable.

But if his bluff worked, the wall would go down! All he needed was access to the inner city, and then . . . He would get in all right! Nastrond would see to that. And also, Nastrond would see that he didn’t get out. But there was one factor that played in Brewster’s hand—Nastrond, and the other Jeffs still faced the danger that had forced them to secrecy regarding the Ho-Ghan up to now; the danger of the news leaking out, and the automatic lowering of the force wall by immutable and age-old law.

Brewster counted, too, on their doubt as to his real intentions. As yet, he was sure, they considered him no more than a rat seeking to gain what power he could by what treachery and double-dealing he could. They did not suspect the real depths of his intrigue: his alliance with Stevens; with the Estannars; with the rebel movements. Proof enough of that was Nastrond’s acceptance of his denial that he had anything to do with the attack on Ulatai.

Brewster brought his tyar to earth before the entrance to the inner city and was immediately accosted by the guards. He found it unnecessary to say anything; he was instantly recognized and conducted forward. He was expected.

He was led through several doors, and finally stood in a great room, the opposite side of which was blank stone. Low in it he saw a small opening, large enough to walk through; and visible beyond was a lighted reception room. But between was a blank space. That blank space, Brewster knew, marked the force wall, extending on down into the ground.

A bell rang once and the captain of the guard motioned Brewster forward. Brewster looked at him, then shrugged and walked boldly toward the opening. He didn’t hesitate as he strode into the lethal area, through it, and into the lighted room beyond. Here several more guards stood, eyeing him speculatively. Inwardly, Brewster shuddered with relief, a nervous reaction that was purely involuntary. Walking through that opening was like walking under a bucket of paint, only on a vastly more potential basis for disaster.

He was led now into the inner city, where he saw ahead of him the fantastically imposing palace of the Ho-Ghan. He made his way down the open street, which was brilliantly lit from concealed light sources. At length he reached the
palace and walked up its broad marble steps.

Here a page met him, conducted him deferentially into a small, but luxuriously furnished room.

IMMEDIATELY the page had left the room, Brewster followed, peered down the corridor outside. When he was certain it was deserted for the moment, he ran cat-like toward a door on the opposite side. He opened it, stepped in, found himself in another ante-room. He left the door ajar, sat down casually in an easy chair, took his heavy pistol out of his belt and laid it across his knees. Then he waited.

In a moment the sound of footsteps came; and two guards took up their station outside the door across the hallway. Then other footsteps came: these softer as though the owner was clad in sandals. Brewster, sitting in the shadows of his own room, caught just a glimpse of the man as he passed. It was Jev Nastrond. Brewster grinned.

A few seconds of silence followed, then an angry question in Nastrond's voice: There was a flurry of excitement; running footsteps faded toward the entrance of the building. Brewster sat still, waiting.

The sound of the sandaled feet came again, returning, and as the owner came abreast of the doorway, Brewster called out in low tones. "Here I am, Jev Nastrond. Please come in, and don't make any fuss; I've got you covered with a primitive, but effective, weapon."

Nastrond stopped, his face flushing an angry red. But he came into the room without hesitation.

"Close the door behind you," directed Brewster. "We'll have a private conference before we proceed to our scheduled business—which I observe you had no intentions of carrying out."

Nastrond closed the door and stood eyeing Brewster warily. "You have a flair for intrigue and drama," he observed coldly. "Also a rather erratic imagination. What is all this child's play?"

"You mean switching reception rooms?" Brewster grinned mirthlessly. "I didn't like the upholstery in that other place. Besides, I don't want to talk in any ante-chamber. Our business is around the council table—with everybody present."

"Exactly!" snapped Nastrond. "And now, if you don't mind, we'll proceed to the conference as was intended."

"But not under armed escort," corrected Brewster. "Remember, I hold all the aces. If I don't come out of here unharmed, the force wall will go down for a year. I can imagine you have an idea of what will happen once that news gets out. From nameless sources, I've learned that you have reason to fear certain elements which could conceivably get past even the Jegsite war fleet."

Nastrond laughed nastily. "Yes," and he repeated Brewster's words, "you hold all the aces. And we fully expect you to play them."

Brewster waved his pistol; Nastrond led the way from the room and down the corridor. After a seemingly endless passage through a complex maze of rooms, they entered a large one, vastly more splendid than all the rest. Incredibly beautiful paintings hung on the walls, the most magnificent Brewster had ever seen. Marble mosaics made up the floor and walls; of an intricate design so painstakingly laid that it must have taken years to complete. The design was such that it automatically led the eye to an ornately carved door which seemed to be cut from a single opaque, cloudy blue crystal. Brewster's eyes fastened on it mo-
mentarily, then he shifted his gaze to the three men who now stood facing him silently, waiting for him to speak.

“No deal, gentlemen,” he said easily. The Jev, Azvedro, spoke. “No deal? What do you mean?”

“Just that there’s one missing,” said Brewster. “This is between us all. We’ll begin when the party’s full up.”

“Don’t be a fool,” said Jev Eblis. “You know as well as any that Ahriman has been missing for many days. No one knows where he is.”

“No one?” Brewster’s glance fell only casually on Nastrond, then swept on to Azvedro, and back to Eblis. The glance had been enough. Jev Nastrond did know of the death of Ahriman. And he also knew who had killed him. There was a sardonic gleam in his eye that he was at no pains to conceal. But could it be true the other two didn’t know? Brewster would have sworn it was so. Brewster went on: “Let’s skip that. I am not referring to Ahriman. He is unimportant. I am referring to the Ho-Ghan. Where is he?”

OUTWARDLY Brewster was calm, but inwardly he was seething with tension. Who was the new Ho-Ghan? That was the question that he had been unable to answer through all of his deductions. And somehow, he sensed that in the answer to that question lay a great deal of significance. Certainly the Ho-Ghan was no puppet. He was a person high in Jeggite circles. And here, now he was gambling much on the mysterious Ho-Ghan’s identity. Would his bluff work? Would the Ho-Ghan come forward? Brewster counted on theupidity of his enemies; and on their curiosity. Certainly these Jevs were not so foolish as to underestimate an enemy—or even a rival, if they supposed him as such—to the extent of being so careless as to pass up learning his plan, no matter what they planned to do about him afterward.

These Jevs were one with the new Ho-Ghan, that he knew. There could be no duplicity nor secrecy between them. Such an empire as the Jegga empire could not have been built on constant treachery and double-dealing. And because of that Brewster felt sure that a simple demand would bring forth the one person in all this set-up he wanted to see. The one person he had to see!

Because of what lay back in his apartment, they could not know that he knew what they thought he didn’t—that his power was nil. All the cards, apparently, were stacked in their favor. They could not suspect his real reason for demanding that the Ho-Ghan be present—that he had any reason other than simply a desire to arrogantly put on the screws just as a matter of throwing his weight around . . .

Azvedro spoke up angrily. “Keep your place, Jev Thyle. You have come here to dicker. Such trivial matters need be brought to the attention of the Ho-Ghan only when . . .”

“Wait!” Nastrond’s sharp voice cut into the sentence like a knife. “All right, Brewster. If you would see the Ho-Ghan, then look!”

Swiftly, as Brewster stood with a frown of incomprehension that gradually blackened into anger, Nastrond strode to a cabinet, drew forth a long robe, a mask with a peaked top, and threw it over himself. Then he turned to face Brewster. “Behold the Ho-Ghan!” he cried.

Brewster laughed in his face. “You fool your companions more than you do me,” he said. “That’s a gag that won’t go, Nastrond. I know better than that. And so do your two companions. Just look at the jealousy in Azvedro’s eyes! And the surprise in
Eblis'. First, Nastrond, you aren't tall enough. Remember, I saw the new Ho-Ghan at the reception; and remember, too, that you stood at my side at the time. The man who sat in the throne was no stooge—you wouldn't risk that. He's a man as important in all this as you! Come on, Nastrond, cut out the kidding."

The three Jews stood stock still. Then Nastrond spoke. "You are right, Brewster. We'll make a deal with you. What do you want?" As he spoke he moved back a few paces. Brewster leaped instantly toward the crystal door, stood with his back against it. His pistol appeared in his hand, covering the three in the room.

"I want to see the Ho-Ghan," he said. "Right now. Open the door, Nastrond, or I'll kill you all where you stand and blast it in myself!"

Azevedro's face flamed, and he reached for his belt, at the same time stepping forward.

"Stop!" barked Nastrond. "Let him go, Azevedro. Let him go in." He crossed to a wall, pressed a hidden lever. Behind Brewster there was the sigh of air, and he sensed that the door was ajar. He turned toward it. But as he did so, Nastrond's hand streaked for his belt beneath his borrowed Ho-Ghan robe. Then, before Brewster could whip his gun up, a flash of flame came from Jev Eblis, and Nastrond toppled to the floor with a ghastly scream of agony.

Moving swiftly, even in his astonishment, Brewster sent a slug crashing into the brain of the forward-plunging Azevedro. He cast one startled glance at Jev Eblis, who was smiling oddly, then the outer door crashed in and Brewster leaped through the crystal door as a swarm of guards entered. He slammed the door shut behind him. Oddly they did not follow.

BREWSTER had no time to debate on the inexplicable action of Jev Eblis. For standing before him was a tall figure clad in a snow-white robe, his face covered by the tall peaked headgear that Brewster had seen in the reception hall on the only other occasion he had viewed the false Ho-Ghan.

"We meet at last," said Brewster, still holding his gun level, its barrel trained directly on the tall figure. "I've been wondering for a long time about you."

The Ho-Ghan remained silent, standing motionless, apparently unperturbed by Brewster's advent. The only sign of emotion might have been the rapid rising and falling of his breast as he breathed.

Now that he confronted the false Ho-Ghan, Brewster was not anxious to strip his mask from his face; rather he stood with eyes intent, roving his gaze up and down the Ho-Ghan's tall, almost slim figure. Tall as himself was this impostor, and with an erect, unfaltering carriage. Brewster's deductions strove to pierce the mask, to guess the man's identity. He failed. And still the man remained silent. Brewster could sense his dark eyes, behind the mask, returning his scrutiny.

"Somehow," Brewster said, "I've got a lot of respect for you. And just on a guess, something just happened behind this door—maybe you heard the commotion out there just before—that makes your part in this just a little deeper than I figured. It's too bad it has to end."

Still no answer from the hooded figure. Brewster smiled grimly. All right, it suited him. There'd be some real drama in this unmasking! "Where's your Sinju?" he asked. "We're going to do a little calling."

The tall figure turned slightly, indicating the instrument at one side of the
room. Brewster nodded and strode over to it. He laid a hand on the control switch, then paused to face the Ho-Ghan.

"Before we begin, I might as well tell you what this is all about. In brief, your game is up. And Jegga's game is up. With the help of a man named Stevens, perhaps the greatest hero the Earth has ever known, the age-old dream of Jev is going to be shattered. Earth, or Kren, will never become the slave of Jegga; and further, Estannar and Boron and all the other worlds will be free. No longer will Jegga rule. Here, tonight, in the inner city, the power of Jegga will be smashed. And do you know what will smash it?" Brewster paused suggestively, smiled grimly, toyed with the gun in his hand. "One little bullet," he said softly. "One little piece of lead from this primitive weapon of mine. A weapon that pales to insignificance besides your own, but curiously, wrought of the one thing that has kept the dream of Jev from becoming a reality ever since that dead day when he killed himself in insane frustration on the surface of Boron, the world he longed to conquer plainly visible, but ever unattainable, just above him. It's ironic, isn't it, oh Ho-Ghan?"

There was a long moment of silence while the two looked at each other. Then Brewster went on. "One little bullet; and with your death, in plain view of the Regio, the force wall comes down. The only thing he doesn't know is that when it does come down, a man named Tartullian will lead an Estannar fleet to attack and destroy the inner city, and with it the defenses of the outer city. Jegga will fall, and the slave worlds will be free."

Brewster's fingers tightened on the Sinju switch and he leveled the gun. Then he stood there frozen, the blood draining from his face in sudden shock. For the Ho-Ghan had thrown off his mask with one motion and stood revealed before him. And a soft, musical voice came to his stunned ears: "Would you kill me, Nick Brewster?"

"Suba!" Brewster's voice came hoarsely from his lips. "Suba Marannes! Oh, my God!"

CHAPTER XII

The girl's face was pale. "At last you are on our side, Nick Brewster," she said. "But what is this about Tartullian?"

Brewster returned his gun slowly to his belt, advanced toward her, still dazed by the unexpected shock of the revelation. "I can't believe it," he whispered. "How can it be possible? You, an Estannar, the false Ho-Ghan! It's impossible!"

"Impossible? For a bheynor?" she asked.

"You! A bheynor?"

She nodded. "Yes. And my grandfather too. What about him; what happened out there?" She indicated the door.

Brewster looked bewildered. "I don't get you. Your grandfather? There are no Estannars out there."

"The Jev, Eblis," she said impatiently. "Is he all right?"

Brewster looked at her silently for a second, then he nodded his head. "I begin to see, slightly," he said. "Yes, Eblis is all right. In fact, he killed Nastrond, and I took care of Azevedro. Eblis didn't follow me, and I gather he had something to do with the guards not following. In fact, it seems to me he led them off somewhere else."

"The plan!" she breathed. "He's gone to put it into execution. The Konos in the city—and the Estannars! The prisons will be opened. There will
be battle in the streets. The rocket of Eblis has become a weapon!"

"Wait a minute," Brewster halted her. "Let’s sit down and get this clear in my mind. What’s going on? How did you get here? How did you get to be the Ho-Ghan? Were you the Ho-Ghan that night at the reception? How did your grandfather get to be the Jev, Eblis? And a million other things . . . ."

Suba smiled, but there was anxiety in her smile. "Yes, of course, but quickly. There are things you must tell me, too. There is much work for us to do. . . . The story is long, so I will give you only the high points. It began long ago. You realize now that I am a spy. That I’ve been working for the Estannar cause for years.

"Our methods had to be complicated, by necessity, and although I could lie, being a bheynor, many others of our agents could not. So they could know only their particular phase of all plots, so that their capture would not give away the ramifications of the plan, nor endanger their companions. Still, messengers had to be gotten through. I was the means of that."

"How?" Brewster was puzzled. "Very simple. Every time a messenger came, I married him. Then, when it was time to go back, I divorced him. You see, as an Estannar, he could never have gotten by the Jeggites. By marrying me, whose reputation as that sort of a woman had been carefully built up, the Jeggites never suspected the truth—nor could they refuse entry to the city of my husband. My grandfather was twice decorated by the Regio for distinguished service to Jegga. He was a trusted man."

Brewster was smiling. "That’s wonderful!" he said. For an instant Suba look at him, then she went on hurriedly. He interrupted her. "About you’re not really being married, I mean," he persisted. Their eyes met, then she went on without further interruption, but he continued to smile.

"TWO of the Jevs were killed, and my grandfather took the place of one of them. That was how it came about that I became the Ho-Ghan. Remember that night in the palace, when the Ho-Ghan was killed? Remember how, later, I left you before we entered the ball-room. It was then that I took my place as the new Ho-Ghan, without even the knowledge of the other Jevs. Actually, another false Ho-Ghan was placed there by the Jevs, but he lived no more than a few minutes after he donned the robe. His body was yet burning as I sat on the throne.

"I have been here ever since. Except for the time you saw me at the burning of the Marannes section of the Estannar quarter. Many wondered, then, where my grandfather was. None could have suspected he was acting as the double of the Jev whose place he had taken. No one would have suspected he could accomplish this feat, because no one knew he was a bheynor. Now he has gone to release the Estannars and arm them, together with the remaining Konos with new weapons he devised from the Eblis rocket. They are powerful weapons, easily comparable to the green ray of Nastron. With them we stand a chance in the outer city."

Brewster sat calmly for a moment. "But not much of a chance," he said. "Perhaps a momentary victory, then disaster when the Jeggit fleet attacks in force. Only by capturing the inner city could they hope to win."

"That is impossible," said Suba. "The Regio’s troops guard the entrance, and besides, the entrance will become one with the whole force wall
at the least sign of trouble—and none but the Jews and the Regio could open it again. My grandfather, unfortunately, does not know that secret. And once he leaves the city, his masquerade will be over, and he cannot return.”

Brewster’s face was pale now. “You mean we can’t get out of here?”

She shook her head. “Not while the force wall is up. And now there will be no chance to get it down.”

“And Tartullian’s fleet will be utterly destroyed by the force wall when he attacks,” groaned Brewster.

“Come,” said Suba. “Let’s go up into the roof gardens. Perhaps we can signal them from there.”

Brewster followed her, his heart lead in his breast. He knew that it was hopeless. Tartullian’s fleet would come in like lightning, staking all in one smash. His complete success depended on his speed and power. Once he gained the inner city, and the outer city with its defense rays, he could fight off the Jeggite fleet, and be master of the situation. But he would be coming in expecting the force wall to be down. And before he knew that it was not down, his fleet would be lying in crushed wreckage at the wall’s foot, just as those dead birds lay there, victims of a force they could not see or understand.

There was one answer. His hand went to his breast...

ONCE on the roof, they could see far over the city, and now, as they watched, they could see that fighting was beginning. Tiny figures were running through the streets, attacking the giant ray stations, and one by one they became the center of flashing maelstroms of green rays and red flames.

Suba looked for a while, then buried her head in her hands. “All for nothing!” she moaned bitterly.

Brewster took her by the shoulders and lifted her up. “Suba, darling,” he whispered. “I had hoped there would be something else for us. But this is something that is beyond even my imagination. Before I say another word, I want to tell you that I love you. And before we proceed to make an emotional mess of it, I want to tell you what I’m going to do.” He turned and stared down at the turmoil in the outer city. He waved a hand outward. “Just how much does that mean to you?”

“Everything!” she said tragically.

“Even your life?”

Slowly her eyes turned until they stared into his. “What do you mean?”

“Are you willing to die so that all that will not be for nothing?”

“Need I answer?” she asked.

For an instant he considered her tear-streaked face, then he shook his head. “No, I don’t. Then, here’s the answer...” He fumbled at his breast and in an instant the flaming jewel of Thyle lay cupped in his palm. He added another, smaller jewel from its pouch in his tunic, then stood there, gazing down at the beautiful flame of them. “I know how to start their action, but not how to stop it,” he said, reflectively.

For a long time there was silence on the balcony of the roof garden, then Suba Marannes spoke. “Start it,” she said simply.

He looked out over the city. “The force wall will stop it. Nothing can pass through that, not even the intelligent fire. But everything inside will be utterly destroyed. When Tartullian arrives, he will find this inner city and all its weapons and the city’s defenses a mass of flame. It is the only way to stop him from attacking it and destroying himself.”
HE HELD the shimmering stone in his palm, his fingers caught the flame, coaxed it forth. Then, with a quick motion, he tossed it over the rail, to fall in a shower of coruscating sparks to the courtyard below. The other stone he carried to the opposite side of the roof and hurled it into the darkness as he had the first. Down below, now, with incredible swiftness the flame grew, hissing with a loudness that rapidly assumed terrifying proportions.

"Death by the fire of the living stone is so clean," whispered Suba, staring down at the holocaust that was growing instant by instant. Already a smaller building collapsed in a rush of brilliant sparkling fire. Suba turned to Brewster and looked up into his face. Then she leaned forward and kissed him long and tenderly on the lips. Just once. He returned the kiss, and they stood looking at each other silently. "No dramatic emotions," he said.

He nodded. "Somehow they seem a sign of weakness."

"And weakness isn’t in your make-up, is it?" Suba said. It wasn’t really a question; more an admission of a fact. But Brewster wasn’t paying any attention to her now. His gaze was fixed on the courtyard below, where the small building had collapsed. Down there a man’s figure was running, toward the outer wall.

"Abbott!" bellowed Brewster in an amazed shout. "Joe Abbott!" Even above the hiss of the flames his voice carried like that of ancient Stentor. Abbott heard it, stopped in his tracks and stared around bewilderedly. Brewster yelled again. This time Abbott looked up. The shock and surprise in his stance was patently evident. He looked up, then looked around at the flames again, constantly growing in violence, but without any smoke or fumes.

He waved an arm desperately at Brewster. It was obvious what he wanted.

"He wants us to come down," said Suba.

"It looks as though he knows something we don’t," agreed Brewster. "He was running for some place. And not long ago I saw him do a vanishing stunt very similar to what he’d have to do now, judging from the blank wall he was heading for!"

Without another word Suba led the way down from the roof garden. In a few moments they were running down the street toward the waiting Joe Abbott, who was critically gauging the advancing wall of flames. Behind them, a portion of the palace crumbled. Toward the opposite end of the inner city, where the exit through the force wall lay, many Jeggites were running. Some of them were too late, and they could be seen trapped behind a wall of flames that advanced rapidly, cutting off their escape.

"Hurry!" yelled Abbott. "This way. I know a way out!"

Brewster and Suba reached him, and Brewster clutched Abbott’s hand warmly for an instant before they all ran in the direction Abbott had originally been heading. As they ran, Abbott panted out: "How’d you get here, Nick? And what’s Suba doing in that get-up?"

Brewster grinned. "Believe it or not, my boy, she’s the Ho-Ghan!"

Abbott gaped, faltered in his stride, then went on, gasping.

"It was as big a shock to me when I found it out," said Brewster. "But what’s important now is that we get out of here. I’ll tell you the rest later."

"How in hell did this fire get started?" asked Abbott, looking back with apprehension at the wall of flames roaring down on them. "Man, this will burn the whole inner city out like tissue paper!"
"I started it," Brewster said. "It was the only way to save the day for the Estannars fleet under Tartullian..."

"YOU know about that!" exclaimed Abbott. And almost in the same breath: "You started this!"

"Don't get confused," said Brewster. "I'm on the right side. Always have been. But I had to know first what the big plan was. Stevens had one, and the Estannars had one, and they weren't getting together any too well. I had plans to call the force wall down, but that got knocked into a cocked hat. There was only one thing to do, burn the city out..."

"And yourselves along with it!" interrupted Abbott. They had reached the wall now, and Abbott's fingers roved over it, found a rocky protuberance, and pressed it. A section of the wall sank back. They went inside.

"Yes. Because in less than an hour, maybe minutes, Tartullian's fleet will attack with all it's got—straight for the inner city, thinking the force wall is down..."

"No!" exclaimed Abbott. "For God's sake, no!"

"The fire'll stop him, if he doesn't get here too soon. If the whole inner city is a mass of flames, he'll have sense enough not to waste time on it. He'll proceed to section two of his plan, and go after the outer city defenses."

"They'll be tough to crack."

"They're already being cracked," said Brewster. "We saw it from the roof. The Estannars have been released and armed. Don't ask me how—that's a long story, and I don't understand all the angles myself, yet. But Suba, here, can explain it all. It's her grandfather, more recently the Jev, Eblis."

Behind them a roar of flame cut off his voice for an instant, and Abbott shouted: "I don't know how to cut off that stone door. I had to leave it open. But further on we pass through the force wall and I can close that. This is a secret entrance Nastrond knew about. I don't think even the Ho-Ghan knew it existed. He had me brought in for some reason not more than an hour or so ago."

"I saw you," said Brewster. "And I can give the reason. But I got to the outer wall and you'd vanished as though the earth had swallowed you up."

The noise was terrific now; and the tunnel through which they were passing amplified it. After a hundred more yards, in which the heat grew more terrific by the second, Brewster began gasping. Ahead of him Suba faltered, would have fallen. He caught her.

"The oxygen!" he panted. "It's going fast—being sucked out by that damned flame. How much farther, Joe...?"

"Here!" came Abbott's voice, almost as though he were answering, although Brewster realized he hadn't heard a word Brewster had said. Even Abbott's triumphant yell had come to him only as a whisper.

Abbott pushed Brewster ahead, then followed. A few yards farther, and as though it had been cut off with a knife, the roar of flames ceased. They were in total darkness.

"I never want to run a gauntlet like that again!" Abbott's voice came fervently, sounding startlingly loud in the silence. He lowered his tone a bit when next he spoke. "We're okay now, Nick. It's a few hundred feet to the other stone door. Then we'll be in the street."

"Let's go," said Brewster. "I've a hunch we're going to be needed out there. There's fighting to do."

"That's for me!" exclaimed Abbott.
“I’ve been itching to get my hands on some Jeggite throats for ages now.”

BREWSTER put Suba on her feet. “You’re going to stay right in here,” he said. “Nothing can happen to you behind these walls. And right now, I don’t want anything to happen to you. We’ve got important matters to discuss after this is over . . .”

“Nothing doing . . . about staying in here, I mean,” she said. “I’m the next in line in command among the Ho-Tonda Estannars, and if anything should happen to Grandfather, I’ll have to take over. I’m going out there with you both.”

“You’ll have to let her come,” said Abbott. “She’ll only follow. I know these Estannar women, believe me.”

Brewster grinned. “I didn’t expect her to stay,” he said. “It was just my way of saying I think a lot of her. But come on, let’s get going. If my ears don’t play me false, there’s hell beginning to pop out there!”

* * *

HELL had begun to pop. There was no doubt of it when they stepped into the street. High in the heavens over Ho-Tonda a vast fleet of warships wheeled and rushed in battle. And everywhere ships were falling; both Estannars and Jeggite. But as they watched, it was evident that the proportion was three to one on the red side of the Jeggite ledger.

On a rooftop nearby a group of Jeggites were preparing to put a green flame cannon into operation. Even as they watched, its first bolt shot skyward and an Estannar ship fluttered like a broken leaf; came down out of control.

Brewster took his pistol from his belt and with six deliberately spaced shots, picked off the entire crew. The sound of his shots was lost in the roar of battle, and the absence of any flame streak gave the gunners no clue as to what was striking them down.

Abbott whooped with joy. “Got another of those cannons?”

Brewster grinned, pulled out the other one and thrust it in Abbott’s fist. He also whipped a belt of cartridges from beneath his robe and Abbott strapped it on. Then Abbott plunged down the street in search of something to shoot at.

* * *

THE next few hours were a maelstrom of action that culminated finally in the exhausting of Brewster’s ammunition. They found themselves in a large square, not far from the former Estannar quarter, which was still blacked with fire. Other sections of the city were aflame now, and the sounds of battle were diminishing. A large Estannar ship landed in the square, and troops poured out, took up stations all around. Two figures emerged from the ship.

The little spaceman rushed forward, clasped Brewster’s hand and pumped it up and down. “You old son of a gun!” he babbled. “You pulled the trick after all, didn’t you? Even better, you beat us to the punch and burned that inner city joint out! We Earthmen did all the invasion navigating . . .”

Brewster grinned. “Wrong, Rogofsky. The force wall’s still up. I couldn’t call it down. You see I’m not a Jev at all . . .”

But Rogofsky’s face had gone sickly pale. “You mean . . . Lord! The only reason we didn’t dive in was the fire. No use attacking something that’s
already burned out. Thanks, Brewster! You never did a better job of playing with matches!"

Tartullian advanced and shook Brewster's hand. He was an old man with white hair, but his face was young. And now it was wreathed with triumph and the realization of a lifetime dream. "We've won, Fyavo," he said. "Ho-Tonda is ours, and most of the battle fleet of Jegga is smashed. The master world is no longer master."

Brewster grinned. "I wonder how I'm going to tell them how lucky they are back in Brooklyn. Nobody'll believe me." He turned to Suba. "One more thing, Suba. Take me to the nearest telescope."

"Telescope?" she was mystified. "What do you want with a telescope?"

"I just want to show you something," Brewster turned to Tartullian. "How about a company of men to guard us, while we go?"

The question in Suba Maranne's face never left it, but she led the way through the city to a building whose top was the familiar dome of an observatory. They entered and when they reached the telescope, they found an old man sitting calmly studying a book of star-maps.

"We want to take a look at Kren," said Brewster. "I'll show you where when you've got it in the screen."

The old astronomer got to his feet, and in a few moments the familiar globe of Earth lay glowingly green on the screen. It grew rapidly larger, until finally only the North American continent was visible. Once more Brewster saw that peculiar shifting phenomenon that brought patches of the surface into startling magnification. He took over the instrument himself, and the scene on the screen moved until the eastern seaboard of the United States came into view. Then, more delicately, he maneuvered until the scene on the screen showed a broad river, and across it a giant bridge. Brooklyn bridge.

"There," said Brewster, taking Suba by the arm. "That's where we're going. Just as soon as we can get the metal works at Ulatai back into operation. That's Brooklyn, your new home." He looked at her. "Okay?"

She looked at the screen, then turned to smile at him. "Okay," she said.

THE END

SUPER DIVING SUIT

R. CHRISTIAN J. LAMBERTSEN, of the University of Pennsylvania Medical School has announced the invention of a new lifesaving oxygen suit to aid guards in rescuing drowning persons. In addition to this use, the new apparatus could be used for inspection and minor repairs of hulls of boats under water. It can also be used for pearl and sponge fishing and with some slight changes in mines, sewers, gas companies and chemical plants where the atmosphere is deficient in oxygen or contains noxious gases.

This new innovation allows a life guard to stay under water for about eighteen to twenty-five minutes in depths to sixty feet while searching for a drowning person, instead of the usual one minute at depths to thirty feet.

The oxygen harness is strapped to the life guard's back and weighs just over twelve pounds in the air. Under water its weight cannot even be felt. A small cylinder for oxygen or an oxygen-nitrogen mixture fits into a pocket. A nose and mouth mask, rebreathing bags, lead plate and a soda lime container are the other features of the life-saving apparatus. The breathing bags, breathing tubes and inhaler are all buoyant under water and their lift almost exactly balances the under water weight of the oxygen cylinder, regulator, soda lime container and lead plate.

Within fifteen seconds or less the entire life-saving outfit can be strapped on and ready for use. It is designed to fit persons of different size and shape without time-wasting adjustments. This harness does not require any assistance at the surface like the deep-sea diver's outfit. The only fault of the ensemble is that it does not protect the life guard from cold while under the water.
THE AURA OF DEATH

By HELMAR LEWIS

Brutus, the dog, became endowed with that mysterious possession, a human aura!

WHAT would you say if I told you that, with my auratron, I have given a soul to my dog, Brutus? Yes! I have done just that! Before I subjected Brutus to the rays of my aurascope, he was merely what his name implied, a brute. He was an enormous wolf-dog that I raised from a puppy with a good strong body, a fairly intelligent brain—as intelligence goes among dogs—but, withal, a soulless brute.

When I first examined the dog under the aurascope, the results were, as I had expected them to be, entirely negative. After all, Brutus was not a human being. But, after an intensive subjection to my auratron ray, when I examined him next, I was overjoyed to note the presence of an aura—a soul, in other words—in what had once been my dog.

Perhaps you are not aware of the awful implications of this experiment. Perhaps you do not realize that, in fashioning an aura—a soul, that is—for my dog, I had clothed him with human qualities. Do you understand what I am driving at now? Yes, I had made a human being out of what had once been an animal.

I had made a human being!

For after all, a human being is simply an animal with a soul. And I had endowed an animal with a soul. I had taken the soul of old Professor Anton Grodt, who had died in my house while I was in the midst of my experiments, and transplanted it in the body of the dog, Brutus. Would the dog, now, have the moral and ethical values of the late professor who had been a kind, generous old man—a refugee from Germany—full of love and toleration of the foibles of mankind?

Understand me, I was not seeking the sensation of a talking dog. Speech is a physical attribute, the result of man's superior intelligence. The soul that I had put into the dog would have no effect on his intelligence, I realized. It would simply give him a system of values that places man above the brute animal. And these values, I discovered, did not evidence themselves in the dog at first. But gradually I found that Brutus became more considerate of my comforts than he had ordinarily been. He ceased barking at strangers and, most important of all, refrained from keening to the moon, that greatest of dog delights. Then I noticed that Brutus' eyes, instead of being wild and menacing, as one would expect from a wolf-dog, had taken on a kindly benevolent glow, much like the eyes of the professor.
Brutus half-rose to his feet and snarled.
from whom I had taken his soul.

But I do not lay too much stress, yet, on the miracle I have wrought. An insufficient amount of time has passed for me to make grandiose claims for my discovery. I must keep a careful scientific check on Brutus observing all of his actions minutely and recording them in my case-book. And I am certain that one of these days, as soon as he has completely oriented himself to his new-found soul, Brutus will begin to react ethically and morally to everything around him, in the same proportions as a human being.

But there is another consideration that holds my attention now. You may recall that, when I mentioned my auratron, I said that it could act upon the soul, either positively or negatively. I had already proved its use, in a limited way of course, by transferring the soul of the late professor to the body of a dog. That experiment, however, had been performed on the body of a dying man. So, naturally, I was unable to observe the results of his having lost his soul.

**MY CONCERN**, now, is to determine the effects of my auratron on a live human being who had lost his soul. For some time I have been working on it. Naturally, I have deduced certain theories regarding the outcome.

For example, I know that if I detach the soul from a man, he will lose all moral and ethical values. That means that there is a possibility he will become, perhaps, another Jack the Ripper and roam the dark purlieus of the city attacking innocent women.

Then, again, with the loss of his ethical values, the subject of my experiment might conceivably become the most cunning thief in the world. For it is this sense of ethical values that trips up most criminals eventually and brings them to justice. For it has been my experience that there is in every human being, because of the presence of a soul, some spark of soul-necessity that forces him to regard his life of crime with rue and therefore indecision. And it is this feeling of indecision that causes him, at some time, to falter in his criminal activity and betray himself.

So, if a person were to lose his soul, because of my aurroscope, I visualized that the result would be an anti-social, unethical, unmoral—not necessarily immoral—thinking brute of a man who could become a menace to society. But there might be other sidereal results. Perhaps, because of my experiments, I could develop a super-intelligence. After all, it is a commonly known fact that we allow our intelligence—our better sense, that is—to be superceded, in a great many instances, by the introduction of the soul—sentimentality.

I, for instance, have succeeded in making myself entirely unsentimental. I am a cold, calculating and completely intelligent scientist. Were I to allow sentiment to intervene in my work, I would have some compunction in using my niece Adelaide in my experiments. And that is what I have already done.

For at this very moment, as I am writing these lines into my journal, Adelaide is resting on the apparatus I have devised in my laboratory preparatory to undergoing my experiment with the auratron. Yes, I have decided to use her as my human subject to determine the effects of losing the soul in a human being.

In a very short while, after she has relaxed herself completely, I expect to arise from my desk and begin the experiment on her. She agreed to become my guinea pig because she loves
me. You see, she allowed sentiment to overcome her natural fears because, as a human being and possessing a soul, she did not possess the super-intelligence which would have warned her away from it.

My problem now will be to determine whether or not she will achieve that super-intelligence after I have deprived her of her soul. She is a beautiful girl. From my desk I can see her lying outstretched on the activating pallet. Her long, blonde hair shimmers like gold around her head. Her eyes are closed now but I know them to be a clear blue under the eyelids. The skin on her face is of that translucent quality that adds so much to a beautiful woman. Altogether, in face and form, and even in temperament, she is the ideal woman.

But what will she be after she loses her soul?

Will she become a cunning, calculating woman whose only object in life will be to project herself over the bodies of her dead lovers to fame and fortune? Will she become a sex-mad fiend who will give herself over completely and unequivocally to the dubious delights and pleasures of lust? Will she become a vicious, depraved and bestial creature who will prey on mankind and wreak the vengeance of her soul-less brain on them?

I DON'T know. That is why I am conducting this experiment on her. For, on the other hand, she may turn out to be a credit to mankind. The loss of her soul, as I have mentioned before, might conceivably give her the super-intelligent mind. For, freed from the fetters of sentiment, ethics and morality, her brain might be enabled to soar to heights of intelligence heretofore unattainable to the ordinary mortal. With her superior intelligence, she may develop into a human being whose resourcefulness would result in untold wonders for the world—new and radical developments in science, in industry—in virtually anything.

These are matters that can be determined only by the experiment that I am soon to perform on her. As I look down at the floor and glance at my dog Brutus, I cannot help but reflect that my experiments will turn out to be successful.

Already, in a mere dog, I am beginning to note signs of humanness. There is that look in Brutus’ eyes—a look of accusation, almost—that proves to me that he is developing a quality of sympathy and sentiment. You see, Brutus has become sentimentally human because of his soul. He resents and objects to my forthcoming experiment on another human being who still possesses a soul. Such are the results of human sentiment.

Now, as I look over to where my niece is resting easily, I can see that she is almost ready for the experiment. I have already started the motor which furnishes the power for my apparatus. The electronic tubes have all been warmed sufficiently so that they will deliver the shower of electrons the moment I turn the activating switch. From my chair at the desk I can see the various gauges and meters and I note with pleasure that they have all been set at their necessary calibrations. There is a pleasant humming sound in the room coming from the coils of the activator-receiver under the pallet on which my niece is resting. I can even smell the odor of ozone in the air issuing from the X-ray tube overhead. Soon I will turn the rheostat, the Z-ray tube will sizzle and glow and the ozone will permeate the room even more. And I will direct the nose
of the auratoron activator around the body outline of my niece. She will quiver, I know, for her body will sense, intuitively, that it is being deprived of one of its supposedly most precious possessions. After five minutes, when I have gone over her complete aura, the experiment will be finished.

Then what will happen?

Well—time has come for me to find out. I must close the pages of this journal for the time being. Later on, when I have completed the experiment on Adelaide, I will reopen these pages and note down the results. I wonder what I will be able to write then?

Will it be "a super-intelligent human being?"

Or will it be "a depraved beast?"

I observe that my hand quivers as I write these last few lines. You see, it is because I have a soul that I am visibly affected by what I am going to do. The beautiful girl lying on the pallet is of my own flesh and blood—my brother's daughter whom I have cared for ever since she was a child. Despite my supposedly scientific callousness, I am subject to human sentiment—because I have a soul. Who knows? If the experiment on Adelaide turns out to be successful, I may turn the auratoron on myself next. Then I shall not experience these sentimental tremors that shake my hand as I write these words.

I know one thing. My next de-souling experiment will be performed on Brutus. I do not like the look in his eye. He stares up at me, from where he is resting on the floor, his great brute body poised on springs of steel, as though he is preparing to pounce on me. He cannot stand the effects of sentiment. I shall return him to the brutehood from which he sprang.

But, enough of writing. The time has come for action. The subject of the experiment is fully relaxed to receive the activating rays of the auratoron. The auratoron itself is ready to perform, its myriad tubes glowing warmly, its maze of inner apparatus humming like a live thing. It awaits the touch of my finger so that it can go to work, as though it fully realizes the importance of the part it is to play in the affairs of the world.

These are the last words I shall record in my journal at this time.

What will I write next?

* * *

From the Los Angeles Dispatch, July 11, 1941:

FAMOUS SCIENTIST BRUTALLY KILLED BY PET WOLF-DOG

At seven o'clock yesterday evening, the police were called to the home and laboratory of Dr. Lucius Crandall, world-known scientist.

On breaking down the door leading into the scientist's laboratory, they found his dog, Brutus, mauining over the dead body of his former master. The entire laboratory and its contents were in a shambles, as though the dog had tried to destroy everything in it.

Also in the room, cowering in a corner near the telephone, which she had used to call the police, was Miss Adelaide Crandall, the scientist's niece who lived with him.

"I don't know why Brutus did such a thing," the lovely young girl declared to the police. "Brutus was like one of us and he loved my uncle faithfully. But, as I was lying on the pallet in the laboratory, I heard him bark and when I opened my eyes, I saw him over my uncle's body gnawing at his throat."

She could give no other reason for the tragedy. "I'm glad the police shot the dog when they entered the room," she added. "He might have attacked me next."

BACK THE ATTACK—WITH WAR BONDS
James Dwight Dana

James Dwight Dana, American Geologist, mineralogist and zoologist, was born at Utica, New York, on the 12th of February, 1813. His early education was acquired in his home town, after which he entered Yale College. Upon graduation he was offered a position as instructor in the United States Navy, which afforded him an opportunity for travel in several parts of Europe.

In 1836 he was appointed assistant to Professor Silliman at Yale, and while serving in that capacity published his first important work "A System of Mineralogy," which at once became a standard reference book in its specialty throughout the world, and has remained so ever since.

From 1838 to 1842 he was a member of the United States Exploring Expedition under Commander Wilkes—whose field was in the southern Pacific Ocean—in which he specialized on the subjects of mineralogy, meteorology, hydrography, corals and crustacea. He brought back with him 230 entirely new species of corals, and 638 of crustacea. He also wrote the narrative of the journey. In recognition of his great services to science on this expedition, he was appointed in 1850 to the chair of natural history at Yale, where he remained for the succeeding forty years, an honored and highly appreciated member of its faculty.

Corals were originally classed as among the zoophytes by Cuvier, by which term he meant those low forms of animal life that are fixed to a definite position and place, and have the appearance in most cases of growing plants. The word is no longer used in the current system of classification. In its place the species it covered are known as hydrooids, corals and sea anemones. The last two belong to the class anthozoa, and constitute one of the most wonderful divisions of the animal world.

Coral is a calcareous, galatious or horny product, which is secreted from the water of the sea by that strange form of animal called the polyp. After passing through its organism, the refuse material is excreted, and deposited around it, after much the same process by which the oyster constructs its shell, except that in the case of the coral the structure keeps on growing indefinitely, and like a plant, while each polyp, during its brief existence, occupies a minute cell in the material so built up, reproduces itself by a process of budding, and then dies.

The individual is little more than a minute and formless speck of protoplasm which, when taken out of the water when alive, drains away in the state of a watery slime from the little cell in the body of the coral which was its home. When alive, and in its normal condition and situation, it protrudes portions of itself like little fingers or hairs, from the entrance of its cell, and by means of these finds and absorbs its nourishment. These fingers or tentacles are supplied with nerves, and are extremely sensitive. If touched by a foreign and objectionable body they are immediately withdrawn, and only reappear slowly and cautiously. Under normal conditions they are continually protruded, and by waving about collect the nourishment necessary for their growth.

In most cases these polyps exist in colonies, each individual leading apparently a completely solitary life and having no association with or relation to its immediate neighbors even though the cells which constitute their homes are very close together. The coraline forms produced are of almost infinite variety, and though the product of each individual in building is extremely small, the combined products are enormous, consisting of the formation of islands and groups of islands, and of barrier reefs hundreds of miles in length.

They can live only in clean water, and in depths less than 125 feet, and also require a temperature of 68° F. or over, which is obtainable only in or near the tropics. The color of coral is generally some shade of white or gray. But in the Mediterranean and Red seas, and in the Persian gulf a red variety is found which is much prized for jewelry and ornamental purposes. At certain places in the Pacific a coal black kind occurs, which brings even a higher price than the red.

Dana's great services to science were recognized abundantly during his lifetime. In 1854 he was elected president of the American Association for the Advancement of Science, and later became a member of the Royal Society of London, the Institute of Paris and the Academies of Berlin, Vienna and St. Petersburg. In 1872 he was awarded the Wollaston medal of the British Geological Society, and in 1877 the Copley medal. He was the originator of the modern theory—now universally accepted—of mountain folding and formation as the result of lateral pressure; and taught that valleys are, with rare exceptions, entirely products of erosion; and that in fossils, the individuals that compose a species, are almost endlessly diverse in form detail.
JENNY—THE FLYING FORD

BY ELROY ARNO

T WAS pitch dark behind Lew Jenken's barn. The moon had long since hidden behind a bank of clouds. And for a good reason. This was Halloween, and the moon couldn't continue watching what took place below.

The Elks were busy. That is, the Elks club of Fountain Falls, not the toothy variety of north-woods animal. The Elks had a surprise on tap for Lew Jenken. Namely, Lew would awaken in the morning to find Jenny, his Model T Ford, astraddle the roof-beam of the barn.

The job of getting bulky old Jenny to her weather-vane post wasn't a simple one. Several members had already fallen the length of the shingled roof and landed in the haystack below. However, piece by piece, Jenny's metal anatomy was going up the ladder.

Jenny, be it understood, was not the common variety of Ford. She had been number 1,000,000 off the assembly line and Henry had felt like breaking a bottle of champagne over her bow. Mr. Ford had made this remark at Jenny's launching:

"She's smooth, all right. Looks as though she might take off and fly."

So proud was Jenny at that moment, she almost tried to fly. However, her fenders were on tightly and she was unable to flap them. The moment was long since forgotten.

Twenty years had passed. Jenny (short for Jennifer) was now held firmly together by baling wire. She managed to stay on the road, delivering Lew Jenken and his eggs to Fountain Falls every week end. She quenched her modest thirst with distillate and carried on.

But because Jenny did have a personality of her own, she resented the treatment she was now getting. Not that she hadn't been taken apart before. Her entire physical apparatus had been strewed about the lawn so many times that she wondered how she managed to go on.

It was now past midnight. Lew Jenken was fast asleep, sawing on a favorite log. He dreamed that one of his flock of hens had just produced a golden egg and he was signing a contract for the wonderful fowl with Walt Disney.

The Elks were sweating their way up and down the ladder with Jenny, or parts thereof. Jenny had but one consolation. What she lost on the ground, she gained on top of the barn. As she came apart, so did she go together again, but with minor variations.
Jenny was a rare car indeed; number 1,000,000 off the assembly line! You'd expect her to have unusual qualities...
Walter Frish, High Master or something, of the visiting Elks, toddled down the ladder after the fifteenth trip and accosted his nearest brother.

"And me with a bad heart," he managed to puff. "This would kill me if I had to work this hard."

Curt Rand, expansive, very red and also built for lighter labor, managed a retort.

"Wish I could fly up there," he groaned. "I've counted the steps on that ladder until I know just how high I am by the feel of the wood through my shoe bottom."

Frish started to chuckle.

"I'm thinking of Lew Jenken's face when he comes out here in the morning. It's the only thing that keeps me alive."

The Elks toiled on.

AND so it was that at two o'clock on that crisp October night, Jennifer the Model T found herself complete once more, worn tires straddling the top of Lew Jenken's barn.

Her headlights, engine and seat cushions were in approximately the correct places. Beyond that, Jenny didn't dare to guess. Not that she was frightened. For a car, she was experiencing an entirely new set of emotions.

The Elks were gone.

Jenny took an experimental lunge forward, her left tires slipped and she started to slide toward destruction. Jenny balanced herself again but for an instant her piston rings slapped terribly. Then the wheels stopped slipping and Jenny remained tense, afraid to move again.

The moon was still hidden. Jenny blinked one headlight, then the other and her faint, yellow eyes cast a glow across the farm-yard. With her lights on she felt safer. However, the height gave her a start. How on earth would she ever get down?

Jenny sat there a long time, crouching forward on her springs, engine pumping wildly, wondering what to do next. Then into her mind came the old yearning.

Jenny had always wanted to fly.

Henry Ford had said she looked almost smooth enough to do so. In fact Jenny had secretly tried to fly several times during her colorful career. Always she failed, but with the feeling that perhaps it might be that her fenders were too tight. She had never been able to flap them.

Now they were looser than they had ever been before.

The Elks had been careless with their wrenches and screwdrivers. Jenny felt all wobblily and relaxed. If she could flap her fenders fast enough, could she stay in the air?

Jenny moved forward cautiously to the front end of the barn. The yard was a long way below her. It was muddy, but still not a soft place to land. She knew she was taking the chance of wrecking her rear end again, and that wasn't a pleasant thought.

What of it? A girl of her age had seen life. Why not take a chance?

Jenny crouched forward, her springs flexing under her, and cold sweat broke out on her radiator. She leaned back again, straining away from the big open space before her.

It was no use. How could a Ford fly?

But, unless she tried, how would she ever know? There was a lot of woman in Jenny. A lot of that stuff that says "you've got to try everything once."

Jenny flapped one fender. It was very wobbly. It moved up and down lazily, almost a foot. She tried the others. They all wiggled up and down and she felt very light in the dash board. It was a queer heady feeling.

Jenny took a long chance.

She backed up about five feet, gath-
ered her wheels under her and leaped forward with all the power she could manage. The edge of the barn was gone and she hung in space over the barn-yard. She was so frightened that she almost forgot to fly. Then, with a great clatter, she started to pump her fenders up and down with all her strength.

Jenny didn't fall. She hung in space, then slowly, very slowly, moved in a gentle arc up over the house. It was wonderful, feeling her strength like this. Jenny reached the road, flew over it, then tried a few slow glides and swoops. They worked without a hitch. She dropped gently to the drive beside the house, settled into the dust and let her fenders flap.

The moon was bright now and she was afraid someone would see her.

Triumphantly Jenny rolled up the drive, and through the open barn door. Contented and at peace with herself at last, she dropped into a long, peaceful sleep. Something feminine and subtle within Jenny had been satisfied. At last her full power was realized. No Cadillac or Auburn would push her from the highway again. The world held endless experiences now that she had longed for all these years.

Lew Jenken was a mild man. He had a couple of hundred chickens and they provided a small income by supplying eggs and fryers for the market at Fountain Falls. This morning he was angry. The neighbors had borrowed Jenny the Model T, yesterday.

He hadn't driven her since then, but what had happened to Jenny was a shame. He backed Jenny out of the garage this morning, realizing that her fenders were about ready to fall off. There wasn't a tight bolt on her old body and he wondered if she'd make the trip to town without falling apart.

Lew backed the T up to the door of the hen house. He collected the last of the eggs, put them in a partly filled egg crate and placed it on the rear seat. Then he went back into the coop and brought out three full crates, the accumulated work of a week for himself and fifty layers.

"Eggs," he mumbled to himself. He spat tobacco juice half way across the yard and climbed behind Jenny's wheel. "Fifteen cents a dozen, and with butter at fifty-six. Can't sell enough to buy a living. Oughta do something . . . ."

Lew had been going to do something about living conditions for twenty years. He never quite got to it.

Jenny felt grand this morning. Under Lew's guiding hand, she entered the county road and started sputtering toward Fountain Falls. Twice she hopped a few feet off the road, trying out her new power. Lew swore, blaming the jumps on the bad road.

"I swear they oughta scrape these roads a couple times a year."

Jenny listened to Lew's complaints, and moved ahead with a certain degree of speed. As she moved, a strange new emotion took hold of her. So many times she had come this way. Always she had carried Lew and his crates of eggs. This morning something new had been added. Jenny was feeling her oats.

"I ain't so old," she whispered to herself. "Pfui, what's twenty years? Got a few more years in me. I can fly like a kite."

Then she lapsed into thought, wondering if her plan wasn't a little risque for an old girl with her mileage.

"But why?" she asked herself. "So I can fly like a bird? Birds manage, don't they? I could try!"

Naturally what Jenny was pondering could hardly be known. Her words, and her thought were not audible.
At last she made up her mind. She snorted, overheated a little with excitement, and her radiator started to puff and blow off steam.

"So I ain't got feathers, and I ain't got the ability to get started," she muttered darkly. "But I can do the rest of the job as well as anyone."

Her last words were pronounced just as Lew got out to pour fresh water into the boiling radiator. It all happened so fast that to this day Lew isn't sure if Jenny actually moved, or if he was clipped by a Flying Fortress.

Jenny gathered her springs under her and bounced into the air. Her radiator cap caught Lew under the chin and sent him spinning into the dust. Lew tried to roll over, gave up and passed out cold. Not so Jenny. She felt the smooth power of her fenders as she sprang into the air. She gained altitude fast, pumping with all the strength in her tank. She was above the road and leveling out for swift flight. She knew exactly where she was going. A few miles behind Lew's farm was a dense wood-lot. In it, several huge elm trees reached high into the air, with huge spreading branches. Jenny swooped around, caught the beam and went winging away across sunny farm land. A few crows, startled by the sight of a flying Ford, followed at a safe distance. Jenny flew carefully and the eggs on the rear seat rocked with the vibration of her body.

THE remainder of Jenny's story is legend in Fountain Falls. Lew Jenken wandered into town during the afternoon, his jaw swollen and his temper matching it. He met Walter Frish in front of the grocery store.

"And by golly, someone jumped in her and knocked me down. They stole the buggy and the eggs too."

Frish wanted to ask Leo how he managed to get Jenny off the barn so fast, but Frish was also Sheriff; and if Lew's car was stolen, his duty was clear.

"I'll phone the state police right away," he said. "They won't get out of the county with it."

"Wouldn't go far, anyhow," he added under his breath.

BUT the police didn't find Jenny. Lew didn't find her. In fact Jenny was lost for the better part of two weeks. When at last she was reported, the call came from the county airport.

"Lew Jenken?" the voice on the phone asked.

Lew grunted.

"Mr. Jenken, you reported a Ford missing a coupla' week ago?"

Lew's interest grew.

"Yes!"

A chuckle on the wire.

"We spotted your car in a tree, Mr. Jenken."

"In a...?" Lew clutched the table for support. "But—but...?"

The chuckle came again.

"Well, it sounds funny, but you said it was a model T. One of our boys was flying over Breeze's wood-lot this morning. He said he saw something in the top of a big elm. He flew low to get a better look, and reports it was a car, probably an old Ford. Don't ask me how it got there!"

Lew hung up. He scratched his head, then he scratched his chin. After a long time he scratched his chin again, swore a loud oath and started out on foot across the back-eighth.

So that's where they found Jenny, the flying Ford. She was perched in the highest branches of a big elm. Lew climbed the tree while Walter Frish and Curt Rand waited for him below. Rand grinned, then sobered quickly.

"No, Walter, it would be impossible."

“The barn was hard enough. How in hell anyone could ever get that Ford way up there . . . ?”

Lew Jenken got the greatest shock, however. It might have been his imagination, but as he edged carefully out toward the limbs that Jenny occupied, he fancied that Jenny moved suddenly, as though about to fall. Lew hesitated, shook his head and moved forward. The limbs were thick and Jenny was across several of them. He reached the car and climbed carefully into the rear seat.

The egg crates were empty.

“Stole ‘m, the . . .!” he murmured, then his eyes opened wide.

The eggs were gone. In their place, fluttering or cuddling close to Jenny’s motor, were dozens of tiny fluffy chicks. Jenny’s hood was lifted high. Under it, the chicks struggled over and under her engine. Lew moved out farther, not able to believe what he saw.

His hand moved out carefully and he managed to grab a chick. Jenny’s motor started with a bang, roared loudly and the tree started to vibrate. Lew dropped the chick and scurried back toward the trunk of the elm. Jenny’s motor idled gently and the chicks flocked closer to the warm engine.

Jenken didn’t stop until he reached the ground.

“I see she still works,” Frish said.

“ Heard you start the motor.”

“What bothers me,” Rand said, “is how do we get her down?”

Lew Jenken was shaking from head to foot.

“We don’t,” he stammered. “By the gods, we leave the motherly old settin’ hen up there where we found her.”

Head down, he started toward home.

IT HAS never been recorded how or when Jenny left the elm tree in Breeze’s wood-lot. Lew Jenken knew, because right after that he bought a second-hand pickup. He returned to the wood-lot once and found a couple of hundred well started chicks under the elm tree where Jenny had perched. He sold them at a very nice price, and used the cash for a down payment on the pickup.

As for Jenny? That one attempt to become a mother had brought her a surging wish to live. A long-felt need to visit new and exciting places. She tired of her flock soon after it hatched, and set out on wing to see the world.

Thus, dear reader, if you awaken some spring morning to find a decrepit model T Ford staring in your bedroom window from a nearby tree, you will probably be dead sober. It will be Jenny the flying Ford, seeking excitement in far fields.

THE END

BEAT THE HEAT WITH VITAMIN C

WORKERS that have to perform their duties under conditions of high temperatures are often attacked by heat cramps and heat exhaustion. Industrial doctors have found that this is due to the loss of salt from the body through sweat and thus companies have installed salt pill dispensers near drinking fountains so that workers could replenish their bodily needs for salt. However, cases still occurred where workers suffered from heat cramps and prostration.

Physicians of the Medical Division of Du Ponts believe they have solved the problem with their vitamin C pills. By giving workers two tablets a day they have cut down heat cramps to a very minimum even where the temperature soared above 100° and the humidity was very high. Each tablet contains 50 milligrams of vitamin C, 250 units of B-1, and other B vitamins.

The success of the Du Pont Company indicates that the plan will soon spread to steel mills, foundries, ship yards, blast furnaces, and the many other places where men work under high temperatures. In fact, the army may use it for its soldiers fighting in the tropics and the navy will find it useful for its men working in the boiler rooms and gun turrets.
"THIS," I said as the space-freighter, AROMA, capacity-loaded with fertilizer, spun down through Mercury's gale-torn atmospheres to a near-fatalf crash landing, "is disgusting."

Even as I was extricating my expansive self from the cargo, two disgruntled gentlemen dashed into the hold.

"Juggernaut Jones made us crash!" one screamed, glaring at me. "Nobody can mess things up like Juggy!"

It was Mr. Joe Karp, peddler of the pathetic repulsor-ray Globe Glider—the only serious competitor Uneek Fliers' famed hypo-magnesium, rocket-type product has in the air-transport field.

My rival's presence meant there was a market upon pirate-infested Mercury even greater than that intimated by my immediate howbeit jealous superior, one Sales Manager Harmon T. Dee. For Mr. Karp, while weak in a sales campaign's closing phases, has a knack of smelling out markets.

"Juggy made us crash!" Mr. Karp shrieked.

The man with him—a muscular gentleman named Captain Smith whom I had met previously during my campaigns—nodded.

"Ol' Blubberpuss has done worse.

"This crash," I said, wiping cargo from my wrist watch, "is one catastrophic event of which I am innocent. Since we left earth on this wreck which you now command, I have been locked within this odorous hold, pitchforking

All Juggy had to do was put skis on his flier and he had a natural market in this world on skids

Great chunks of ice smashed through the dome of the city

169
piles. Your unwarranted act—"

"Unwarranted!" Captain Smith gurgled. "You call sitting your fat whosis down on our main control board unwarranted! For twenty God-awful hours we were spiraling straight at the sun before we could repair our lines."

"But you repaired them? The AROMA was under control approaching Mercury?"

"Right," Captain Smith replied grudgingly.

"Then why," I asked, "blame me for your faulty piloting?"

Wincing, Mr. Karp began scrutinizing the hold. Well forward were dozens of atmospheric demonstrator planes. Half were Mr. Karp's Gliders; half, Uneek's superior models, including a 30-jet, ski-equipped light-duty truck which, to aid schedule runs, carried the revolutionary new Perfection Clock.

While this cold-climate machine was famed for its ability to proceed on its skis over crusted snow when atmospheric conditions jeopardized flight, Harmon T.'s inclusion of it, with equipment designed for operation upon the closest planet to the sun, further strengthened my suspicion that Uneek Fliers Inc. sadly needed a far-sighted individual such as myself in charge of its New Chicago Main Office. But definitely.

"Where," Mr. Karp asked, "are the rest of your tools?"

"In the tool closet, naturally."

"Tool closet!" Captain Smith shouted. "There's no such thing—"

I crossed the passage to a flush-type door.

"This," I said, "is the tool closet."

OPENED the door and an avalanche of unoxidized X-anthracitic rocket powder, plus the charred remains of a goodly number of pitchforks tumbled upon me.

"Tool closet!" Captain Smith groaned. "That's the firing chamber of the AROMA'S No. 1 braking rocket. No wonder we couldn't stop." Pitchfork in hand, I was conducted to the AROMA'S control room. "You'll start," the Captain explained, "with that board and repair every lead."

"This board?" I asked, inadvertently touching a lever.

The AROMA leap convulsively upward, then dived nose-first down a long, tapering cylinder. We stopped mid-way with a grinding thud.

"Every tube backfired!" Captain Smith screamed. "He's wrecked an entire spaceship this time!"

"We're miles," Mr. Karp moaned, "from the Twilight Zone. We'll freeze!"

"On Mercury?" I chuckled.

"He's done it again." Captain Smith whispered. "He's rushed into another of his idiotic campaigns without knowing beans about the field."

"Mercury," I said, "is a small planet, dangerously close to the sun. Only a small sector called the Twilight Zone is inhabited."

"The Millennium!" Mr. Karp gasped. "He's right."

"The inhabitants," I continued, "are colonists, constantly being decimated by dastardly, if mysterious, pirates. Where," I protested, "on this sun-and- pirate cursed planet is the rumored giant new market?"

"Who," asked a squeaky voice, "is the captain here?"

Crouched in the doorway, clutching two ugly black whips in its shovel-like hands, was a hideous, man-sized, fur-coated creature. Two bulbus green eyes, projecting from its mousy head, glared at us with bestial fury.

"Be brave!" I thundered to my comrades.

Lunging forward, I thrust my fertil- izer fork viciously into the monster's
white belly. Shrieking, the creature fell writhing upon the floor. Promptly, myriads of the repulsive things charged through the doorway. Dozens subdued me just as the Mercurian, who had miraculously withstood my attack, bounded erect.

“Fun is fun,” it squeaked, lifting its polarized glasses to wipe its weak eyes, “but this is no occasion for tickling. I’m Chief Talpar. What ails this fat thing?”

“That,” Captain Smith said, “is a long, sad story. Salesman Juggernaut Jones has sold airplanes to birds, fish and metal people but he still can’t understand that humans aren’t the only intelligent life.”

“This monster,” I scowled, “speaks space-American but I’ve never seen a member of its race . . . the Pirates!” I gasped. “The mystic raiders of the Twilight Zone! Exposed!”

“We Talpites,” the cunning Mercurian said uneasily, “are a nervous, retiring people with a hereditary dislike for heat and light but we have, shyly, kept in touch with the Universe.”

Mr. Karp stepped forward.

“And you Talpites live here in the Black Zone?”

“Right. We have a city. Talpiton.” Chief Talpar touched his glasses with a whip butt. “We were happy until some fool invented these anti-glare specs, thus tripling our life span. Talpiton is now overflowing and threatened with starvation.”

“A shortage?”

“Decidedly not. Our Sectary, located off in the vegetation-supporting Twilight Zone, is producing more than enough food. The trouble is: our food-carrying Degenerates couldn’t keep pace with our population increase.”

“Then,” Mr. Karp smiled, “transportation is your problem.”

“If such,” I said stiffly, “is true—which I doubt—then, sir, there rests within this freighter your salvation.”

“No you!” the Mercurian squeaked.

MODESTLY, I nodded. “Myself and trucks. Dependable Uneek trucks equipped with Perfection Clocks to assure on-schedule deliveries. Rocket-type carriers, sir, which, belching fiery streamers of oxidizing hypomagnesium fuel, will flood your countryside with light, heat and—”

Chief Talpar recoiled. “After we’ve spent billions insulating and perfecting these polarized lenses to avoid lethal rays!”

“I, then,” Mr. Karp chuckled, “have your solution. The feathery Globe Glider which is not only as lightless as a spinster’s night but as noiseless as a lover’s whisper. Mighty invisible, ground-contacting repulsers will—”

“DeLuxe Uneeks,” I injected, “are equipped—at slightly higher cost—with rocket dampers and exhaust mufflers. When in flight—”

“Flight?”

“Exactly.”

“Talpiton,” the Chief sighed, “lies beneath us. The tunnel to our distant food Sectary is about half the width of this ship . . . Flying machines for subterranean dwellers! Insane!” His nose twitched. “Gentlemen, do you realize your freighter is now lodged inside our city’s only air-vent? That millions of Talpites face suffocation?”

“A minor item,” I chuckled. “We will rush repairs and blast—”

“Blast! Thundering rockets, lethal heat and light would mean a death more certain than suffocation . . . Who,” Chief Talpar asked, “must we thank for this ghastly end we face?”

He was informed forthwith.

IN THE Talpiton County jail, surrounded by dull-appearing cellmates
—all humans—I pondered my predicament. Despite the impetus of the frightful cold, my agile brain failed to identify even the most fragmentary sort of sales campaign.

"Revolutionary!" I scowled.

An objective, to be sure, was available; i.e., to save myself et talents so I could continue in the service of a company which, while niggardly with salaries, depended upon me et talents to hold its coveted position as "King of the Airways."

Naturally, innumerable obstacles complicated this objective. I was (1) incarcerated, (2) in disfavor with my jailors and (3) doomed to death by suffocation since the AROMA could be removed only by Talpîte-destroying explosives, rocket or otherwise.

Yet even should I surmount all obstacles, no man of my standards would think of supplying the fiendish Mercurian Pirates (Talpîtes) with flying ships to further their nefarious deeds.

"For the first time," I sighed, "I am without a market."

I studied my fellow human inmates who were wandering loggishly about. My impression was of men, mentally stultified by some great tragedy. All were trudging aimless beats upon a floor made uncertain due to a fused coating of shiny, translucent crystals.

Gazing from the prison window, I saw Talpîte City—a stupendous, tank-contained metropolis of mushroom-like buildings, all roofless save several giant, oddly familiar structures drawn up, directly beneath me, beside a wide outer-drive type of avenue which followed the city-encircling, jail-containing walls.

Overhead was a tremendous crystal-studded dome, supported by myriads of thin, roughly-square metal posts.

It was as though I looked through a window into a gas storage tank in which a forest of slender trees was growing from a bed of decapitated puff-balls. The nearest roof-support, I noted, was two-part—half ornamented brass, half crude iron. Both metals were riveted one against the other.

"The expansion factor," I mused.

Below me, countless furry, begoggled Talpîtes were afoot upon the city-girdling outer drive. Most were swarming around the larger roofed buildings which, undoubtedly, housed the governing element. Well to my right, following the outer drive's curve, I saw a wall opening leading to the air-vent wherein the AROMA was lodged. A similar opening, far to my left around the curve, fed the tunnel which connected Talpîte with its food-dispensing Sectary.

The openings were directly across the tank from each other yet, due to building congestion and the closeness of the roof-supporting posts, travel from one to the other was restricted to the long circuitous route around the outer drive.

But vastly more important, I could see, within the main walls as they curved, endless rows of barred windows from which stared stupid human faces.

Humans. Thousands. Man-power!

MY BRAIN was suddenly two notches beyond high gear. I had but to whip the joy of living into my fellow incarcерates, lead them against the Mercurian Pirates, install my liberated fellow humans in this tanked city and—

"Zounds!" I gasped. "I have found my market!"

Numberless ski-fitted, clock-equipped Uneek 30-jet trucks would slide, not fly, merrily across the wax-crystaled tunnel floor to the Sectary and back with food.
“But more,” I said. “No need, with humans, for costly rocket mufflers. Open jets, belching flame, will supply much-needed heat and light to this underworld.”

One minor item remained unsolved. Obstacle three. Death by suffocation. I was aware of hacking coughs about me, a tightening in my own lungs and a shivery, totally-unexpected lurch of the entire city area below. Talpites began flinging themselves towards the huge governmental buildings.

As ever, in a crisis, my brain responded.

“The AROMA’s rocket fuel,” I decided. “I, and my noble cellmates, will pack a giant bomb and ignite same beneath the AROMA, thus not only blasting the ship from the vital air-vent but liquidating the vulnerable Talpite Pirates as well.”

At last! A campaign replete with acceptable objectives; i.e., sell Uneek Fliers. It was possible that, considering the instability of this world—as just demonstrated—the Talpites were planning an exodus to other worlds, where, by burrowing in the soil, they would cause surface cities to crumble. Thus, disorganized, the entire Interplanetary Union would fall victim to these slave-hungry Mercurians.

I, alone, could prevent this!

“Objectives,” I enthused, “worthy of my talents.”

I whirled upon the nearest prisoner—a hard-fisted gentleman with the name “Lars” stamped upon his broad chest.

“You, peon!” I cried. “Attend. Salvation is at hand.”

Shout as I would, not a flicker of interest could I arouse.

“Who?” I asked, “has been incarcerated the least length of time?”

“Jailed! Locked up. How long. How much time—”

“Time?”

I bared my wrist and pointed at my watch. “Time. How many—”

In a flash, I was buried under writhing bodies. Lars snatched my watch, simpering eagerly as he watched the jerking second hand. Another dullard grabbed the time-piece, then another and another. The last tossed it into a neighboring cell.

In rising, my palms touched the foggy floor covering. Several loose granules clung to my flesh, dissolving with no unusual chemical reaction.

“Unfair,” I protested. “Must I, to an already over-loaded campaign, tie the millstone of strange materials?”

My cellmates, now, seemed jittery. Eyes held a weird, blood-chilling glint.

“Temporarily unbalanced,” I said.

“No doubt due to fatigue.”

The prison door swung. Several spectacled pirates entered and casually whipped six prisoners, Lars included, from the herd.

“Desist!” I thundered.

Slashing calmly, a Talpite nicked my wrist. A devastating shock ravaged my body.

“You, too,” the fiend squeaked.

STUNNED, I marched with the six out along a metal-protected corridor up a ramp to emerge high in the air-vent at a point opposite the bow hatch of the stranded AROMA. Entering, I found Messrs. Karp and Smith, plus the cunning but shy Chief Talpar, unbolting glassic travel-covers from two atmospheric fliers.

One was Uneek’s renowned 30-jet, ski-and-clock-equipped truck; the
other, Globe Glider's similarly fashioned but inferior model.

Sighting me, Mr. Karp choked, Captain Smith guffawed and Chief Talpar blinked apologetically.

"Poor eyes," he said. "My men couldn't see—"

"Degenerate!" Mr. Karp howled. "Juggernaut Jones rounded up with a gang of brainless degenerate laborers. Ho, mamma!"

"Come to think of it," Captain Smith smirked, ogling me, "there is an amazing resemblance. Fat, idiotic puss; blank eyes—"

"This," I scowled, "is insulting."

"Perhaps," Chief Talpar said, "I was hasty in jailing you but—"

"Skip it, Chiefy," Mr. Karp said. "Juggy's used to prisons. And like you say, your Degenerates are harmless."

"Sir?" I inquired.

"Planetary conditions," Captain Smith sneered, "decide which species is to reach the intelligence level. Because of surface disturbances, Mercury was best suited for burrowing mammals of Talpidae. Humans here, obviously, have degenerated to a near-brainless state. Get it?"

"Naturally," I nodded.

"That," Mr. Karp said, "I'd like to bet on!"

"What," I asked, "transpires now?"

"Without you to mess things up," Mr. Karp explained, "we've hit on a way to save Talpilton. The Chief says his Sectary chemists have developed a quick-acting solvent which will melt the AROMA's tel-iron stays. We'll collapse the ship—you ruined it anyway—and clear the vent."

"And you, Juggy," Captain Smith leered, "will foot the bill."

"But—"

"Gentlemen," Chief Talpar said. "Our breaths are numbered."

"How much time we got?" Mr. Karp asked.

"Time?"

"I mean in minutes and hours. If we've got to chase through that tunnel, clear to the Sectary and get back with the solvent—"

Chief Talpar shuddered. "Time! We have no such measure. Ages ago, we threw off such frightful shackles to our liberty. But if your Glider is able to skid through the tunnel as quickly as you—"

"Glider!" I scoffed. "Much as I dislike to malign a competitive product—"

"Conk out, Juggy," Mr. Karp said. "You're getting your chance. We'll need two loads of solvent. I'm playing it fair like always. We'll both ferry back a load. We'll make it that the first one back to this air shaft gets—"

"The test!" I cried. "The proof of product. With sales to the winner and—"

I STOPPED, aghast. So cunning had been Chief Talpar, even I had been tempted to swallow his story of starving Talpites. Even I had envisioned a market—once the AROMA had been melted—for adaptable, ski-fitted trucks, sliding through the slick, crystal-coated tunnel, bearing food from the distant Sectary.

What action to take? Scores of whip-armed Talpites were about us. And only six human prisoners. Messrs. Karp et Smith, being duped, would side with Chief Talpar. Indeed, so deluded was Mr. Karp, he had, as customary, craftily arranged this pseudo-fair test of product, thinking to impress the one he believed was our prospectus—Chief Talpar—with the magnificence of his nature.

However, once we were locked in our
bitter duel, Mr. Karp would—again as customary—employ every foul means he could devise to best me.

"I must," I decided, "bide my time. Time?"

I frowned. With Tulpiton without a time measure, speed schedules would mean nothing. Quite unexpectedly, a feeling of acute pessimism seized me. It was as though I were sunk in a quagmire of timeless eternity in which struggle was senseless.

"I will comply," I thought. "Mr. Karp and I will again compete. However, in winning, I will be impressing not the cruel Pirate Tulpites, but the humans whom they have enslaved. While the AROMA is being dissolved, my revitalized force will seize the X-anthracite rocket powder, plant our bomb and—victory!"

I flung a knowing glance at Degenerate Lars, now listlessly engaged in helping lower the two competitive ski-trucks to the shaft bottom, preparatory to a dash out the vent, around the outer drive, past the government buildings, to and through the opposing wall opening which fed the tunnel leading to the Sectary where the solvent waited us.

Lars caught my eye. Again, I was disturbed to see a hard glint within those heavily-lidded eyes.

MILES from Tulpiton, beneath the so-called Twilight Zone in a cavern which, though far warmer, was a miniature of Tulpiton City even to the brass-iron, closely-set supporting posts, Mr. Karp and I prepared to embark upon the test run back.

The solvent, in plastic containers, was aboard. Swithtering Tulpites waited the take-off while behind them, in cages, I could see a most frightful collection of bugs and crawlers.

The Sectary.

"It," I frowned, "is simply a breeding place for insects."

My campaign faced disaster. Insects were food for Tulpidæ; humans scorned such tidbits. The rescued pseudo-degenerates might scorn my suggestion that they employ fleets of trucks to haul mere bugs.

Even more grief had struck me.

I had, on pretext of needing help to load the solvent, taken Lars as passenger, to impress this soon-to-be-freeed human on merit of product. But in the process of being caught in outer drive traffic as we slid easily along on the sturdy skis, and being forced to follow Mr. Karp through the first ghastly turns of the crystal-coated tunnel, my prospectus had fallen sound asleep.

Once in the curve area, I stopped to inspect the slippery, translucent passage covering. Of irregular shapes, all loose particles dissolved on touch without undue chemical reaction.

"Odd," I mused.

Regaining my cab, I found Lars staring with hypnotic fascination at the dashboard clock. Somehow, the act aroused in me a strange premonition.

Driving forward into a long, low-roofed straightofway, I discovered Mr. Karp waiting. As I slid towards him, he started moving. Simultaneously, I felt myriads of his silent, invisible but potent rays press upon my hull.

"Practicing," I frowned. "He seeks to perfect the best means of fouling me when we begin our return test run."

It was, of course, an old Karpian stratagem—that of knocking me off-course—made possible by his outdated type of machine.*

---

*A Glider is able to maintain height and forward movement only by directing its electro-beam repulsor rays upon a reasonably level solid, creating, literally, an airship which "walks" on invisible stilts or props. Naturally, without a suitable solid to contact, a Glider, differing from a free-flying, or sliding, magnesium-powered, rocket-type Uneek, would be helpless.—Ed.
The tunnel's roof was only inches above our hulls.

"There will," I decided, "be no leap-frog passings."

There was, however, just enough room to pass on the horizontal.

"But such," I admitted, "will be hazardous with Mr. Karp bombarding me with course-disrupting repulsers. Better if I take the lead at the start. Right?"

Lars, staring grimly at the clock, made no answer.

ARRIVING—and loading the solvent—Mr. Karp swaggered over.

"I," he said, "am sick of you jumping the gun on these tests. So I'm having the Talpites put blocks under both our skis. When they jerk them away, we'll go."

He retired.

"A childish attempt to mislead me," I chuckled.

The foot-high blocks were placed. As the Talpites stepped back, uncoiling the ropes which would jerk away the barriers, I flipped the "On-Power" switch. Powerful but dampened rockets sprang to life. Rapidly, I computed a take-off which would lift me over the blocks, down on the skis and into the tunnel ahead of Mr. Karp who, naturally, had plotted the same move.

Due perhaps to my uneasiness regarding Lars, I cleared the blocks by fifty feet, striking the domed roof, bouncing from four slender but sturdy brass-iron support posts to enter the tunnel, with one of the block-ropes caught in my skis, some twenty-five feet a-rear of Mr. Karp who, as I had prophesied, had jumped the gun.

"The crisis," I said, "approaches."

Mr. Karp led on the straightofway. Once within the curves, passing, even for a pilot of my ability, would be difficult.

"I must," I decided, "pass before we reach the curves."

I sounded my klaxon, threw on power and prepared to zoom past Mr. Karp, rope et al, to victory. Quite suddenly, I found myself et ship bounding back and forth between the waxy walls like a berserk billiard ball. Crystals, chipped free, showered about me.

I straightened ship. Mr. Karp was still twenty-five feet ahead.

Again, I threw on power. My strong but muffled rockets spat madly. We lurched forward. Abruptly, we were upside down, sliding rapidly to the rear, the rope flapping behind.

"At least," I sighed, "durability is being proved."

I stopped. The solvent was intact. With Lars' help, I righted my ship and faced it around.

"Watch yourself," Lars growled, "else you'll break clock."

His voice was bestial. His hands were tensed, claw-fashion, as though he contemplated a maniacal lunge at my throat.

"Excitement," I decided. "Over-eagerness at being rescued."

Again, I moved forward. Mr. Karp, suprisingly, had stopped, waiting. Approaching warily, I felt countless repulsers stab against my skis.

"That," I said, "was how it happened."

HOLDING course dextrously, I nosed on. Mr. Karp did likewise. I increased my speed. Mr. Karp, too, gained momentum. Plotting a surprise dash past him, I suddenly threw on top speed. To my dismay, the Glider took a similar leap and held the lead.

I switched on the reserve tank of ethylized, double-hypoed magnesium which all demonstrators carry. My gallant craft responded with a leap of unmatched fury. So, unfortunately, did
Mr. Karp. Beyond him, I saw the first lethal curve. Beyond those snarls lay Talpinton. And across that tanked, dome-protected metropolis was the air-vent finish line.

The crisis!

To allow my agile brain free action, I slowed pace. Mr. Karp, oddly enough, did likewise.

"Conserving power," I said, "for our half-circle run through traffic around the outer drive."

My brain was tardy with the solution. I further de-accelerated. Mr. Karp, likewise. Still in high, my motors coughed and suddenly died, stopping us dead.

"Bonehead!" Lars hissed, doubling his mighty fists.

As I stepped from my ship to ponder this new development, a barrage of unseen repulsers swept my legs from beneath me. And as I crashed upon my muscular stomach in a veritable storm of crystal-pebbles now showering from the walls, my hapless Uneek zoomed backward. Mr. Karp's Glider was shuddering but making no progress. Realization struck home.

"The waxy crystals," I cried, "being fused upon these straight walls, offer Mr. Karp's repulsers no footing. Only by focusing those propelling rays upon my craft, has the wretch been able to progress. Verily, I have been pushing him!" Then, as Mr. Karp jumped from his stalled ship and as Lars drove a toothed braking strip down on the floor, stopping the Uneek, my brain whirred into high gear. "I," I smiled, "hold the whip hand!"

"We'll suffocate!" Mr. Karp wailed, rushing back through the rapidly fouling air.

"I ask," I said, "only that I be given safe passage around your pitiful Glider. To sell my prospectus, I must finish sales!" Mr. Karp howled. "He thinks of sales when millions are gasping their last! Okay, you win."

"I will return for the solvent," I said, as I slid my ship past the deflated Glider, "when I have won this race. Maybe," I appended, glancing at glittered-eyed Lars beside me.

There was an odd jerk as my Uneek slipped into the first curve. But not until I had negotiated several treacherous turns, did I dare glance back. When I did, my blood ran cold.

Mr. Karp had snared the dragging blockrope and was progressing blithely along under my tow.

"Knavery," I said, "begets knavery."

I flipped a lever marked "Off—Dampers-And-Mufflers." Instantly the familiar thunder of igniting magnesium poured backward down the passage. As did the brilliant blistering-white flames from some fifteen unequaled jets.

"Knavery," I said as the charred tow rope fell in ashes upon pools of liquefying but unoxidizing crystals now cascading down the metal walls, "has been repaid. Also, my greatest fear dispelled. Those unknown crystals do not burn... So it is forward," I cried, "through Talpinton to victory and sales!"

Something swished past me. I looked. It was Mr. Karp's Glider, again in the lead. I looked back. My flame-spitting jets had swept the crystalline layers clear of the walls, baring the rough metal beneath.

"Dummy!" Lars snarled. "You gave him a footing for his rays."

A FEELING of morbid futility, even greater than that I had experienced in the AROMA, swept me. I had proven adaptability yet trickery had whipped me. Mr. Karp would cross the finish line. The solvent would remove the AROMA. Mercury's dev-
ilish pirates would have breath. Avalanches of orders, garnered by Mr. Karp, would pour upon a company not adverse to dealings with criminals. Lacking revenue, Uneek Fliers would wane. Personnel would be cut. Though indispensable, I would be dismissed due to Harmon T.'s fanatical jealousy of my past successes.

"Catastrophic!" I said.

A huge fist waved menacingly before my eyes.

"Get moving, Fatso!" Lars snarled. Determination flooded me. I would go down—but fighting.

"V. Parker Jones," I thundered, "never quits. Onward!"

I flipped the "On-Damper-And-Muffer," lever, snuffing out heat and flame, and went hurling in Mr. Karp's wake. Around two turns and—Talpiten City!

It was a madhouse. Bands of savage-eyed Degenerates were darting from openings in the city's tank-wall and flinging themselves upon the furry Talpites.

A revolt of the Degenerates!

"War!" Lars shrieked. "We'll massacre 'em!"

Hope flared within me. If these harassed humans won—

"Mr. Karp!" I cried.

His ghastly ship, still on skis, was scarcely one-quarter the way around the outer drive, proceeding slowly past the government buildings. The tangle of fighting men was creating a jam not even he could surmount. I looked out through the forest of slender, brass-iron roof supports and saw the air-vent entrance directly across the tank from me.

"Straight lines," I said, "make for shorter distances."

In a flash, I was aloft, skis folded, driving my flier out over the puffball huts into the jungle of posts. With skill won from years spent dodging Mr. Karp's repulser ray attacks, I swooped and darted around and between those lethal posts en route to—

"The air-vent!" I thundered. "And victory."

A wall—and an opening loomed ahead.

"Excelsior!" I shouted. "The vent!"

"That," Lars said, "is the Sectary tunnel we just came out of."

I had, inadvertently, misplaced directions while dodging posts. I "about-faced" and plunged once more into the maze.

"This time," I said, "Victory sure!"

"Victory?" Lars snarled, pointing down.

I looked. Thousands of begoggled Talpite soldiers were charging up the outer drive, armed with black shocker whips. The disorganized humans waivered, then fled in utter rout back through the tank wall.

"We lost!" Lars screamed. With lips drawn, he flung his hands towards my neck. "You'll never give them air. Never!"

"Who," I frowned, "is the villain here, anyhow?"

GLANCING down, I saw the Talpite militia rapidly clearing the outer drive; saw Mr. Karp's sliding ship pick up speed as it started a wide, sweeping curve towards the air-vent. Mr. Karp en route to victory!

I, who had proven greater adaptability; I, the man who should be recipient of an order avalanche from someone, was aloft, lost between brass-iron posts and facing death by choking.

"A Jones," I said, "dies fighting."

I tensed. My back pressed upon the control board—the "Off-Muffer" lever to be exact. The din of smashing worlds burst forth as every rocket jet went into action; the flame of a crum-
pling sun engulfed every metal post in range while huge gobs of faultily-oxidized double-hyed magnesium hissed down into the massed Talpites. They dropped their whips and ran, beating insanely at their eyes and ears. The Degenerates stopped, turned and made ready an annihilating counter-attack.

But even more discouraging, I saw the metal posts around my suspended ship begin a slow, maddening curve as the component metals answered an irrefutable law of terrestrial physics. As in ancient thermostats, the brass halves of these all-important posts, expanding under heat more than the iron halves, were compensating for this extra expansion by bending outside the curve. To my utter horror, I saw huge gaps appear in the dome above as the time-weakened metal plates there were slowly but relentlessly being dragged down and to the side by the curving posts.

And through those gaps came large translucent blocks, counterparts of the waxy crystals which, as they roared through my blazing rockets and melted, I recognized as chunks of ice. "In the press of events," I mused, "I forgot that Mercury, while closest to the sun, so maneuvers as to hold one side constantly toward that luminary. Quite naturally the other side, cursed by perpetual night, would be glacier covered, thus forcing Mr. Karp's lost prospectus, like the nocturnal moles they are, to shelter beneath the ice.

"Thus," I concluded as larger ice chunks plummeted down to crum ple the governmental buildings, "ends another campaign. This time, disastrously."

Above, through a sizeable seam in the glacier, I could see the stars of Mercury's endless night.

"I go," I said, rocketing upward with Lars' maniacal laughter dinning into my ears, "to bring aid for the oppressed."

There were gales, I discovered, upon Mercury which not even a Uneek could surmount. Not until we had crashed and been jailed by pirate-shy colonists in the Twilight Zone—and the spacegram from Harmon T. Dee, Sales Manager of Uneek Fliers, Inc. had been tossed into my cell—were my fears dispelled.

"These messages," I chuckled, "while superfluous, invariably describe a victory even more staggering than I dared to envision. Likewise with rewards and decorations."

I READ:
"Be advised, as of now, by Directorial Order, you are no longer associated in any way, shape or manner with the Atmospheric Sales Division of Uneek Fliers, Inc.

"Eureka! Hurray! (Deleted)!

"Your Talpite campaign most destructive in your (deleted) career! You not only wrecked AROMA, wiped out Talpiten City and hurled all Talpites into eternal slavery at hands of Lars' people, but, by collapsing huge pocket in Glacier Area, you caused such chaotic storms to roar over Mercury that the Twilight Zone is now absolutely uninhabitable.

"Love but no kisses.

HARMON T. DEE.

"P. S.: As regards your stratagem in smuggling watch to captured colonists—thus dispelling the morbid feeling of pessimism and futility which invariably strikes a human who is forced to endure an environment lacking a time-measure—REgenerate Lars and fellow captives, recovering from their understandable rage against their captors, are appointing you honorary Vice-Chief of new subterranean colony (Concluded on page 185)
Johnny Rain-Maker

BY LEROY YERXA

As is usually the case, Johnny talked too much—and then had to back up his words; he had to make it rain

The weekly meeting of the Indian Chiefs of East Falls was in full swing. Johnny Wilson, fully accredited as Big Chief at the age of ten had the floor. The Indian Chiefs had a darn swell cave, dug in a hill behind Johnny's back yard. It was covered by packing-box sides and had been examined by Johnny's father and pronounced safe.

Discussions had been going on heatedly for some time and the ten chiefs had lost some of their dignity in the process. First, there was the matter of who would be the Big Chief. Johnny Wilson, chosen partly because of politics, had taken his place by the entrance to the cave and proceeded to "lead."

A technical point had come up. Skeets Janson, Johnny's senior by three months, couldn't agree.

"Yaaaa! Just because your old man digs up rocks and stuff, you gotta be the Big Chief and we gotta believe anything you say?"

Johnny owned a box of broken arrow-heads and bits of Indian bead necklaces. That had swung the election. The collection was donated by Johnny's father.

"Nuts," Johnny sneered. "Pop says the Indians could make rain an' everything. They had a lot of magic words and stuff. It was old business with them."

Skeets, in spite of his loud protest, had a lot of respect for Johnny's knowledge.

"Prove it; prove it," he started to chant in a high, sing-song voice. "Old Johnny Rain-Maker's gotta prove it."

The small circle of chiefs leaned forward eagerly. Johnny's face grew very red. His flat nose quivered angrily.

"All right, darn it." His words lacked conviction. "I'll go get some stuff and I'll make it rain."

An immediate silence pervaded the cave. Johnny couldn't make it rain. Still, his Pop knew more about Indians than anybody.

"I don't believe it," Skeets said, but in a more respectful voice. "It's a lot of—of baloney."

Johnny wrapped the ragged blanket around him with proper dignity and retreated from the cave. Once outside, he ran down the steep incline and through the wood-shed into the house. Mom wasn't in the kitchen and Johnny hurried upstairs. Pop's room was empty. He found the little stone frog in Pop's cabinet.

Pop said if you held the frog in your hand and said some magic words, it would start to rain anytime.
Johnny clutched the object tightly in his hand. He'd show them now!
Pop oughta have known. He said it came from an Indian tribe in South America and they always got rain that way. Johnny hurried out of the house and back to the cave.

Nine very pale little boys sat in a quiet circle, waiting for him to return. Johnny held up the stone frog so they could take a good look. It was just a little thing, all gray and homely and it didn't look very powerful.

He placed it in the palm of his hand. His forehead was wet and the palms of his hands were sticky. He looked at Skeets, and everyone was very quiet. Skeets looked scared.

"Go—go ahead and use it," Skeets said. "I'll betcha a jack-knife it don't work."

Johnny was trying to remember the magic words Pop had hold him. If the Indians could make it rain, Johnny guessed he could. His voice was quavery and a little uncertain.

"Send soon, O frog, the jewel of water to ripen the grain and—and . . . ."

He forgot the right word. It was a strange one that he didn't know very well. Something like mill. He started again.

"Send soon, O frog, the jewel of water to ripen the grain and millet in the fields."

The cave was deathly silent. Skeets stared out the door across the yard. The sun was shining brightly against the white boards of the house.

Skeets had a sick little grin on his face.

"Come on, froggie!" He lifted his hands in the air. "Make it rain!"

"Whoosh!"

The storm hit the top of the cave with a roar. All of a sudden the sun was gone. Water came down in slanting white sheets. It washed the dirt from the boards and came through the roof of the cave. Johnny's mother dashed wildly into the back yard and started to pull her washing from the line.

The Indian Chiefs retreated hurriedly to the safety of the wood-shed. Ten frightened little boys stood inside the shed wondering what to do about Johnny's rain-storm. The rain was coming harder every minute. Skeets stared at Johnny, whose face was white as paper. He still held the stone frog in his shaking hand.

"You did it!" Skeets whispered.

"You made it rain!"

"Johnny Rain-Maker!" someone taunted. "Now we can't play baseball tomorrow."

Johnny gulped and said nothing. He was plenty scared. Instead of being proud, he was afraid. They'd have to stay inside until the storm was over. The championship game with the Tiger Cubs was off.

He looked around hopefully at his brother chiefs and saw only frowns. He retreated slowly to the house and put the stone frog back in Pop's room. By the time he reached his own bedroom window, it was darker than ever. One by one the Indian Chiefs ran down the drive toward home. Skeets stopped at the curb and, looking up at Johnny, thumbed his nose and stuck his tongue out.

It rained all week. Tuesday, the Indian Chiefs were planning a hike. They were forced to stay inside and Johnny dropped another degree in their estimation. By Wednesday night, Johnny was miserable. He heard from Skinny Davis, by way of the back fence, that plans were made to drop him from the club. Pop was reading a big book about the Indians of Pueblo, or something. Johnny decided that, once and for all, he would find proof for or against his power to make rain.
He approached the subject carefully, making every attempt to hide his personal interest in magic. His father and he were alone in the living room and Johnny spoke from the warmth of the bear rug by the fireplace.

"Pop?"

Pop looked over the top of his book, not happy at being disturbed.

"What is it, Johnny?"

"Pop," Johnny squirmed uncomfortably. "Could Indians really bring rain when they wanted it?"

If his father was surprised at the growing intelligence of his offspring, he hid the fact behind a smile.

"Why, maybe—if they wanted it bad enough."

Johnny was silent for a long time.

"Pop," he said finally. "If I took that stone frog from your cabinet and made magic with it, would it rain?"

His father looked down sternly.

"You do, and I'll beat the pants off you."

This answer, although it didn't cover the question fully, put a stop to any further research work on Johnny's part. He went upstairs and sat by the bedroom window for a long time. The rain stopped late that night, and the next day Johnny felt a lot better.

However, the Indian Chiefs weren't ready to forgive and forget. They couldn't overlook the injustice Johnny had done them in keeping them inside for the better part of a week. Besides that, they were a little frightened of him. Anyone who can make it rain for three days by reciting magic words, is a good guy to stay away from.

The weeks rolled along smoothly enough, although East Falls seemed to have had its full quota of rain for the summer. Johnny became more and more unpopular as the months went by. Farmers were losing their crops because of the hot dry weather. The chiefs dared not tell their terrible secret to the public. There was a certain fear of retaliation from Johnny, if they did. Perhaps he had more magic secrets, like turning his enemies to stone.

Johnny Rain-Maker stayed close to home, sometimes sitting for hours before his Pop's cabinet where he could stare through the glass at the little stone frog. He wanted to try it again, just to make sure it worked. He didn't quite dare.

Finally the rain situation in East Falls grew desperate. The river was dry. The town wells were so low that water was put on honorary ration. Trucks brought drinking water from High Springs and it was sold in five gallon bottles. If rain didn't come soon, the farmers would leave their crops to burn in the fields.

The Indian Chiefs held a meeting in Skeets' barn. Johnny hadn't been welcome among them for two months. He had been properly ousted from the club and his effigy burned to destroy his power.

Skeets presided over the meeting and it was decided that something must be done about Johnny Rain-Maker at once. Skeets, a little frightened over the importance of the step, suggested that Johnny be summoned. He placed the all important phone call himself.

Mrs. Wilson, Johnny's mother, answered the first ring.

"Hello—Who? Oh, Skeets. Where have you been? Yes, Johnny's all right. Yes, you may speak to him if you wish. Why haven't you been around all summer?"

Finally Johnny was summoned. Skeets heard his voice on the wire, a little timid and frightened.

"Hiya, Big Chief Johnny?"
“All right, I guess. How you been, Skeets?”
“Fine,” Skeets answered. “Say, Johnny, we got something important to do. We want to make you Big Chief again. Can you come to a meeting tonight at seven, under the elm tree on the Jones farm?”

Johnny was wildly happy about the invitation.
“You bet,” he said eagerly. “I’ll be there right smack at seven.”
Skeet’s voice grew more secretive.
“Johnny, bring the stone frog with you.”

Johnny Rain-Maker felt cold shivers playing up and down his back.
He turned around to make sure Mom wasn’t listening.
“I can’t take that again,” he whispered.

Skeets was angry.
“You done it once,” he said. “You gotta make it rain right away or we’ll tell on you. Then you will be in the soup.”

Right then it was more important than anything else that Johnny get his old friends back.
“I’ll—I’ll be there,” he said miserably.
“And you’ll bring the frog?”
“I’ll try,” Johnny whispered, and hung up.

It WAS almost seven o’clock. Pop was late getting home. Mom was sprinkling the garden with an old pail that had holes in the bottom. Johnny took the little stone frog from the case and held it in his hand. Just so he’d remember, he said the magic words over once, under his breath.
“Send soon, O frog, the jewel of water to ripen the grain and millet in the field.”

He ran downstairs, climbed the back fence and hurried along the road toward the elm tree. It was only a little way, but once away from the house, Johnny couldn’t stop running. He had almost reached the group of boys under the elm when a drop of rain hit his nose. Another bounced on his bare arm. He reached the tree and little spatters of dust were springing from the dry earth where the rain drops landed.

He didn’t realize how important those rain drops were until he saw the tense, excited looks on the faces around him. The chiefs were staring at him in surprise.
“It’s raining already,” Skeets said breathlessly. “I didn’t even need a charm. It up and rained without Johnny and his frog.”

The water was beating against the earth in ever-increasing volume. It spilled down as though the clouds had been saving a whole summer’s supply. Water soaked through the foliage of the elm and dripped on the boys. New and ever increasing respect was growing in them for Johnny Rain-Maker.

The Indian Chiefs knew they hadn’t wanted Johnny to produce rain. They had been frightened of him when they thought he could produce magic. Now he wasn’t magic at all. He was just like the rest of them.

Skeets, with water running off his nose, shook Johnny’s hand solemnly.
“We blamed it on you,” he said. “And all the time the charm didn’t have a thing to do with the rain. I guess we can prove it now. The rain sure started all by itself this time.”

“Let’s make Johnny the Big Chief again,” someone offered.

Skeets lifted a stiff arm toward the rain-drenched sky.
“We hereby take away the name of Johnny Rain-Maker and make you Big Chief again.”

“Thanks,” Johnny said. He had a
crazy, choking feeling in his throat. "I'll try to make a good chief."

He looked down at the little stone frog, partly hidden in his hand. He remembered saying the charm all the way through, just before he left home. Johnny hoped it had all been a mistake. Hoped the frog didn't have a thing to do with it. Still, he had said the magic words twice and it had rained twice. And harder than he had ever seen it rain before.

Maybe he'd better keep the frog hidden in his bedroom, in case East Falls ever needed a big storm again sometime. It might work. Johnny couldn't be sure. Not quite sure.

JUGGERNAUT JONES, PIRATE
(Concluded from page 179)

being established in Talpites' ex-Sec-
tary region.

"Interplanetary Union conferring on you Special Merit Medal of Crossed Skis for blocking air-vent and then destroying spaceships (governmental buildings) which Mercurian Mole-Men were readying for invasion dash out of vent, across space to more stable envi-
rons. As you suspected, action of Mole-Men, in burrowing in less rigid planetary crusts, would have spelled disaster to surface life (us).

"Uneek Fliers now on 24-hour shift, turning out ski-equipped models for use by Regenerate Humans in building and lighting their new Sub-Twilight Zone city.

"Profits resulting from sales are being diverted by Uneek Fliers to a long-planned step into the Spaceship Field. Directors naming you as Manager of Special Sales, Solar Division, with salary increase.

"Directors are confident that, in space, your (deleted) sales campaigns will be less destructive in scope.

"They hope!!! HARMON T."
The Tuaraks were a nation to be feared 7,000 years ago. Great land fighters, they were known to the younger, sea-going race of Egypt as "Lybians."

The Tuarak wore his hair in a wave-like crest very similar to that affected by the Indians who inhabited America.

Tuarak legend claims the Greek strong man, Herakles, once ruled them, being the first Tuarak emperor.
THE MYSTERIOUS TUARAKS
By L. TAYLOR HANSEN

Seventy centuries ago a mysterious race of warlike people lived in what is now modern Libya. The Egyptians knew and feared them.

THE flaming day of the Sahara was drawing to a close, when suddenly, against the sunset sky, silently, one after another, as if they had appeared upon the nearest dune from nowhere, three veiled figures, blending with the very sway of their camels, stalked across the horizon. To our questioning stare, the guide murmured but a single word of explanation. It was sufficient.

"Tuaraks!"*

Some seven thousand years ago, before the day of the camel, when to the west a great sea-power was rising to garner the trade of the Mediterranean, the Tuaraks were a nation whose armies were to be feared. The rising sea-power was that of Egypt, and she called the Tuaraks the "Lybi ans."

Today the Tuaraks are a dying people. Pressed by the Arab whom they hate and despise as an invader of merely some two thousand years ago, and by the encroachments of a civilization which they themselves retired from when their own homeland sank below the waves of the Atlantic, the Tuaraks ask only to be left alone.

Yet there is not an explorer who does not crave to penetrate into their territory and wrest from them the secrets of their past before they take those secrets with them into the land of shadows. For it is possible that they may have records which would add fifty thousand years to the history of mankind. It is, indeed very possible.

The Tuarak is a tall, long-headed race, if one may judge from the slits of eyes which are all that the men show to an inquiring anthropologist. Apparently the women, who are not veiled, and who are quite petite compared to the height of their men, are of the white race, or rather, let us say of the dark-whites. Once more, judging from the women, the cheek-bones are sometimes high and wide while a few individuals have grey or green eyes. Others again, have a red skin whose tone reminds one of a Comanche or Sioux Indian. One wonders if the male Tuarak has a beard, but that is a question which is not answered. Perhaps it never will be.

Tuarakian is an ancient agglutinating language whose roots have no similarity whatsoever to the Semitic Arabic tongues which surrounds the tribe. Philologists have attempted to classify this language with the curious islands of a pre-Aryan tongue which survive today only as remnants—Basque, certain groups in the Caucasus, and Ancient Sumer, as well as the great Eastern stocks of the Amerind. However, the study of languages has not progressed as yet far enough to be certain of this relationship. It is a young science, but it has growing suspicions concerning this scattered group. The Tuaraks themselves offer no help outside of the fact that when asked from whence they came, they point to the green waves of the Atlantic.

Other factors mark the Tuaraks as a very ancient Atlantic people. They are completely matriarchal, and it is even to be suspected that the women join them upon the field of battle. Swathed in white robes from head to foot with only the eyes showing, not only would it be impossible to say whether one’s assailant was a man or a woman, but also to identify them. Thus these veiled raiders exact a tribute for the crossing of their territory from everyone—including the Arab who is terrified by their approach. Therefore the mountains of the Hoggar are not a place to be sought oft, but a place to be avoided.

Although they give a sort of lip-service to Mohammedanism, probably carried in by the Arabs, nevertheless these mysterious people have other and older rituals in which the “Ouran” or native giant lizard is decidedly prominent. Furthermore, they refuse to partake of the flesh of this creature, which is considered a great delicacy by the Arabs, because they say that it is their “Maternal grandmother.” This statement not only fixes it as their totem, and gives that dragon the female sex, but it makes use of a word (namely “grandmother”), which is one of especial endearment and respect in the Amerind languages of every stock upon both of the Americas.

* Sometimes spelled Tuwareks or Tuaregs. There are no set spelling rules for these unwritten languages.

ACCORDING to old Egyptian temple-paintings, the Lybi ans were pictured at the dawn

187
of history as dressed in a short kilt-like skirt much like the Egyptians themselves. Yet as the Egyptians bobbed their hair, the Lybians wore theirs in a crest-like wave on the top of the head and a curl or braid over one shoulder. This same type of hair-dress was also worn by the Ancient Cretans, and with some variation is the crest-plus-scaplock worn by many Amerind tribes.* For weapons they carried the lance and the arm dagger. They carry the same weapons today, the evident antiquity of which has made many a collector’s throat go suddenly dry, at the very sight of them.

For body decorations, those who have seen them shed the all-enveloping outer garment say that they wear the polished arm bands of stone which were worn a hundred thousand years ago. And today the Tuaraks carry the great triangular shield which was borne by the Pelasgians, Cretans and others who fought with lances against the small round shield and the heavy sword of the Aryans. Some observers noting the red cross upon these ancient shields have concluded that these people may have been the descendants of some lost crusaders. Of course, it is possible that these shields were so caught, and the green-eyed individuals argue, also, that all the strangers carrying the shields were not promptly killed. However, the matriarchal system, and the Lizard or Dragon Totem, argue that the shields, (the cross and triangular shape) were inherited from an ancestry far more remote than the Middle Ages. Doubtless the Crusaders, in turn, inherited them from some very ancient source, for the Crusaders invented neither the triangular shield nor the lance. As to the symbol of the cross, we must remember that Rome used it to crucify her outlaws and political enemies because she wished to degrade in the mind of her subject peoples the sacred symbol of the four directions. Nor should we ever forget that red was the color sacred to the sun.

The most interesting facts about the Tuaraks, however, do not pertain to either their splendid physiques or their curious possessions. One hears with amazement that these modern outlaws consider that Herakles, the mythical strong-man of Greek legend, was their most outstanding ancient emperor. In the light of this fact, the entertaining supposed labors, loves and conquests of this early hero should certainly be re-surveyed in the light of Totemism. It is immediately apparent that the supposed “monsters” which he vanquished were all man-eating creatures—such as the terrible birds with the brazen wings and beaks, and the all-devouring bull which Poseidon, the sea-god, sent to Minos, the king of Crete. If these were rival nations overcome by the Ancient Lybians, then the various loves of Herakles are to be interpreted as his alliances. Furthermore, the recurring number of twelve, the twelve labors, for example, means that he belongs to one of the nations which followed the moon-calendar. In this respect, it is interesting to note that Herodotus made the very significant remark that Herakles belonged to the twelve gods which had succeeded the more ancient eight gods. The eight gods, of course, stood for the earlier sun-calendar, while twelve is a lunar number.

These facts begin to place for us this antique nation. It is evident that Herakles belonged to troubled times. He had to fight many nations, and it is certain that his reign was one of war in a world where confusion had reigned supreme. Furthermore, his own people bear the marks of ancient conquest, or ancient mingling following conquest, for they bear two totems, that of the Dragon or Giant Lizard, while the early hair-dress is clearly that of the Great Bird. This confusion is fundamental with them for though they bear the red cross and have a matriarchal system, yet they consider the lunar number of twelve to be sacred and hold their present-day “ahals” or singing festivities, under the glow of the full moon.

From these facts, is it not possible to deduce that the day of Herakles, and the day of Lybia’s ancient glory was traceable to that period of pre-history which followed the natural catastrophes of readjustment in water-level upon the retreat of the ice? Certainly such a period of geographical catastrophes would also be a period of war and international confusion. A sudden migration of vast hordes from a flooded homeland into another land already occupied by a people speaking a different tongue would naturally result in war. A few centuries of such fluctuations would bring great confusion. Furthermore, such sudden fluctuations of the water-level would also result in throwing the delicate land-and-water-balance off and inevitably cause some earth-slips and volcanic upheavals. This would in turn, be followed by more confusion.

Is not this, then the time of Herakles? It was the time of the sinking shelf, and of the disappearance of the English Channel forest beneath the rising tides of the Atlantic. If there had been a world-empire of the megalithic-builders, the grip of that empire upon its colonies had been forever broken. Numerous minor totems had arisen. The Hyrda, perhaps the early form of the Octopus or the Spider Totem with its lunar calendar had appeared. As Herodotus said, Herakles belonged to the time of the twelve gods who had supplanted the eight gods of early antiquity.

UPON this background, some of the fantastic stories which the Arabs tell of the Tuaraks, take an unusual significance. One must call the stories fantastic, because exploring expeditions are not able to penetrate the massif of the Hoggar. In that territory, the Tuarak warrior still remains the supreme master of all he surveys. To those who trespass without his permission, comes a swift and terrible retribution. Often as the land has changed nominal mastery, French, Arab, modern Italian—and even the old Romans, found it

* Iroquois, for example, and Eastern Algonkin.
wiser to shun the Hoggar strongholds of the Tuaraks.

Yet around the campfire at night, when the stars blaze out like tiny multi-colored suns, the Arab guides whisper fantastic tales. They begin by announcing that once the Sahara was a vast lake—an inland sea, over which the ships of Egypt, Crete and other powers now long forgotten, sailed from the Hoggar and other masses to a now sunken strip of land circling the present Atlantic coast around Africa’s bulge. This sunken strip was wide and fertile, and in those days the present Madeiras, Canaries and Cape Verde Islands were but the scenic snow-capped peaks of the now-drowned portion of the Atlas, the chain which once cupped the Saharan Sea.

To the student of the distant past, who remembers that Diodorus, the Sicilian, once called this supposed body of water—Triton Lake—and had insisted that an earth-convulsion which had submerged the western Atlas, had also drained the Sahara and turned it into a desert; to that student, this repetition coming from the lips of illiterate Arabs is almost breath-taking. However, this story, though forming the basis for other tales, is by no means the least fantastic.

The guides will tell you that in the heights of the Atlas above a mighty gorge, are the marble towers of Ancient Khamsa. Of course, it has been deserted for millenniums, but at certain times, when the weather is just right and atmospheric conditions correct, then the dark shadows of the gorge again become the blue waters of an inland sea filled with the ghost ships of long-forgotten nations, in a tumbling kaleidoscope of galleys and colored sails, among which the ancient towers are reflected in all of their exquisite beauty.

Nor is this the only ruined city which white men may not look upon. Between the ranges of the Air and the Hoggar, is the once proud Tafassasset. And southeast of the Hoggar, is Essouk, the city which was, millennia ago, the teeming, imperial capital of Herakles.

Intriguing as may be the stories of these ruins, there are still more intriguing stories of the vast underground labyrinths which network the Hoggar. (Doubtless they account for the uncanny ability of the Tuaraks to appear and disappear from sight after some sanguinary raid.) These were once the vast underground fresh-water storage systems which sustained Tuarak cities. Possibly they were the means of continuing these cities after the desiccation of the land. At any rate, the Arabs will tell you that not all of the underground passageways are water-filled. In those which are not, the unimagined splendor of Ancient Lybia still lies in state for the last of her dishinherited children, who wander, ghost-like in their white robes, through these interminable labyrinths. There is gold ... much gold, and books ... books written in a strange script which only the Tuaraks can read ... .

Across the flaming sunset sky of the Sahara, the veiled figures who blended with every movement of their camels, stalked silently along the horizon. The long fingers of the level sunset light stretched out their moving shadows into grotesque spindle-legged giants from another planet. The guide had murmured only a single word of explanation:

"Tuaraks!"

It had been sufficient.
Hale went deep; and around him were ghastly shapes
THE BLACK POOL

BY ED EARL REPP

What was the grim secret that lay in the weird depths of this pool of terror where death seemed to live?

COMING with blinding suddenness the high ringing cry from the darkness brought both men to their feet to stand staring at each other. Hale still clutched his work in one hand and his knife in the other, and Dana had let his fall with a clatter. The hanging lamp washed their shocked faces with yellow light, casting dark shadows beneath their eyes.

A moment of strained silence passed before either spoke. Then Hale blurted hoarsely: "That was Carlson's voice! I'd know it anywhere. You didn't say anything about this, Dana!"

"I thought I'd wait," the swarthy, black-haired man opposite him said tensely. "I wanted to see what you'd say—when they started howling."

Again the shriek laced through the night to freeze them with its horrible import. They stood rigidly in the middle of the small adobe-walled room, waiting for something—they didn't know what.

Around them, out in the night, were the crumbling ruins of other dwellings like the one they were in, ghost-houses of a race long dead. Hale suddenly shuddered at the thought of the hundreds of souls who had passed from this pueblo over eight hundred years ago, mysteriously, for an unknown reason. .....

With an effort he wrenched himself from the spell and hurried to his open suitcase to grab a flashlight. "I'm going down after him!" he announced curtly. "Wherever he is, he's in trouble."

"Don't be a damned fool!"

The shirt-sleeved archaeologist lurched in his path to grip his arm.
"Carlson said that same thing the night he went after Weber. We were sitting here just like we were now, when Weber's voice came from the valley. He grabbed a gun and a light and went out—and never came back. And neither will you, Hale!"

Angry lights flashed in the cold blue eyes of the slender scientist. His hand was quick to brush off Dana's grip. "Nevertheless," he snapped, "I'm going out. I didn't come a thousand miles to this sun-blasted section of hell to pass up the first clue I stumbled over. Stay here if you like—I'm going to find Carlson."

Dana slowly let his hand fall to his side. "All right," he breathed. "But when you start seeing rainbows spilling out of your flashlight and hearing symphonies every time a bat squeaks, you'll get my idea. Only then it may be too late."

Puzzlement shackled Hale for a moment, but in a second he brushed past the heavy-set man and plunged down the steep path into the valley. The crunch of his boots in age-old rubble drummed out his determination. Hastily he went through the tiny half-ruined pueblo to the valley trail. Broken brown walls echoed to his passing, while windows watched him sightlessly.

The thrill of high danger tingled through his veins, but he rushed on, eager to track down this first clue in a maze of puzzles. Not in five years of investigating scientific mysteries had he been buffeted about by such paradoxes, inconsistencies and riddles. Now, with a chance to get his hands on something that might prove valuable, he was stopping for nothing that might keep him from getting a handhold in the case.

Far from being unused to problems such as this, Dr. John Hale made his living solving them. Years ago he had been an independent laboratory technician, with a penchant for unravelling scientific knots, such as the steel alloy that wouldn't distribute its carbon molecules properly, or a plastic that shrank so much on setting that it was useless. After a newspaper reporter wrote him up and labeled him "the scientific sleuth," his business suddenly expanded.

He found himself working on cases with the police, or searching for a lost needle of radium in a hospital, and even tracing down deposits of oil that disappeared. And not long ago he had exploded a "scientific ghost" which nearly claimed a human life. Nevertheless, he was almost bogged in this particular case.

It was a mystery that had brought the three archeologists from Pacific Southwest Museum out here to New Mexico. Dana, Weber, and Carlson had been sent to explore the newly-unearthed pueblo a few miles from Pueblo Bonito, the once great city of eight hundred years ago. Why the city had been deserted overnight historians had never learned. But in 1130 the tribe that inhabited it had simply disappeared—from the section and from history.

The finding of this smaller village only five miles away, by Weber, fired once again the hope of solving the riddle. But after three weeks on the job, catastrophe struck. Weber entered a tunnel down in the small, cup-shaped valley, and never came out. Carlson went after him the next night, hearing his shrieks—and he didn't come back.

The alarmed museum officials got in touch with Hale immediately, fearing a police search which might result in ruin of invaluable archaeologic treasures. Now, for the first time, the shrewd active scientist had something to work on.
ROCKS and tough shrubs fled by him as he raced on. Beyond the slender beam of his light all was blackness and utter silence. Now he stopped, conscious that he was rushing blindly along with little sense of where he was going. The long, white column of brilliance lifted over the ragged heads of mesquite clumps and buckthorn to play over the concave valley floor.

As if the move had been a signal, a hoarse wail lifted from the trail not a hundred yards ahead! Instantly another cry mocked it from somewhere farther off.

Chills rippled the length of Hale’s taut body. Horror drew his eyes wide, set his jaw in hard lines. The blood that slogged through his veins felt as cold and thick as mud.

From some source in his body he drew strength to raise a shout. "Carlson! Weber!" he cried into the night. "Where are you?"

Then he was silent, holding his breath until his chest ached, hearing the chirps of night insects that gave him his only answer. And when he realized the men would not reply, he went racing on down the trail again.

Hale was never to learn just when or why the rigid determination seeped from his body and a dreamy lassitude took possession of his senses.

He was simply wandering aimlessly about the valley, too delighted with himself and this exquisite world of music and rainbow-light to care for anything prosaic. John Hale was happy; he was deliriously happy, with an exuberant joy that carried him along like a cloud.

CHAPTER II

The Music from the Stars

MORE than anything in the world, he wanted to sing. He tried it. The melody that came from his lips caused him the utmost delight, for his voice was as pure as the tone of a bell.

And back at the mud house a white-faced man heard one more ghastly voice uttering horrible lamentations . . .

After a time Hale noticed the stars. But what stars! The black New Mexico sky was studded with glittering chips of gems that were as bright as electric lights. They were of every conceivable color—emerald, red, white, blue—as he peered up with back-tilted head, open-mouthed with delight, he could see a brilliant rain of colored drops descending from them. Streaking through the night sky, they came down like a million glittering meteorites—and every one of them was pattering against his own forehead.

He could hear them. He reached up to catch a handful of the lovely gems; and then he saw his flashlight. It, too, was ablaze with brilliance, pouring a flood of living beauty into the drab underbrush.

Close at hand a bat squeaked. The music of its cry made Hale close his eyes with rapture. Tinkling, evanescent, it was the music of another world.

Everything was right. This was a universe of beauty. Delighted surprise brought his head up as another voice poured liquid melody into the night not far below him. With an answering voice, he went running down the path . . .

In the next moment his foot struck a rock, and he crashed headlong to the rocky trail. Pain blinded him. He lay there stunned for a moment. Then, rubbing his skinned knees, he got to his feet. For a moment memory failed him.

"How did I get here?" he puzzled, as unfamiliar landmarks rose to his vision. Suddenly he caught his breath. In a terrifying rush the recollection of what
he was just doing came back to him. In that very instant he commenced to know the sensations of lassitude and joy again.

In his mind there remained sufficient stability to send him running blindly back up the path. Terror clung to his limbs, chilling them, but he was possessed of one thought: To get back out of this valley of madness!

Somehow he did it. A reservoir of strength was tapped to lend him the power to gain the hut. Staggering, he lurched through the door to fall into his chair.

**IT WAS** five minutes before he could speak. “You were right!” he muttered. “It’s a valley of madness!”

Dana nodded. “Had a taste of it myself when I went after Carlson. I tell you, there’s insanity in the very air!”

But Hale’s mind was already shuffling through facts stored up in his retentive memory. “Ever hear of *peyote*?” he asked at last.

Dana said, “I thought of that, too. *Peyote* buttons give the same exhilarating symptoms, but neither you nor I ate any. The Mexicans and Indians sometimes use them in ceremonies, but I fail to see how that could affect us.”*

Hale’s brow folded in thought. “So do I. But I’ll swear there’s *peyote* back of this somewhere.”

For a while they were silent. At last the scientist stood up. “I’ll take a look around the building before I go to bed,” he explained. “It’s just possible . . .”

“I wouldn’t,” snapped Dana. His black eyes were malevolent under his brown forehead. “This place isn’t safe even in daylight. You’ve already tasted . . .”

Hale was already across the room, getting his little black bag in which he carried a number of instruments important in his work. “I wouldn’t feel right being careful,” he smiled. “After all, the museum is paying me five thousand dollars to find Weber and Carlson, and I’m afraid I’d have to earn it, this time.”

He had an unpleasant intuition of hostility as he went out.

There were about fifty two-story adobe dwellings in the pueblo, and in the hour that followed Hale climbed over most of them.

The feeling of intrusion would not leave him, as though he were trespassing on forbidden property. The silent, square houses with their empty-looking windows seemed to resent his presence, he thought. But only silence and emptiness greeted him as he trod through empty rooms and climbed over roofs. He was dirty and tired when he thought of bed again.

His light ran down a wall, and he winced at the black loneliness of the windows. Wearily he started back—to lock his steps in a grinding halt, whirling to stab the ray through a window.

“Glass!” he gasped. “Glass—in an Indian pueblo!”

His long legs rushed him over the ground and across the threshold . . . and as his eye mirrored the scene inside the room, a breath of amazement rasped in his throat.

A laboratory as modern as his own occupied the room! Instead of pottery ollas and stone artifacts, the flashlight glittered over sparkling flasks and retorts and tubing. Gas cylinders flanked every wall, and at their feet squatted

---

* Nature, September, 1937, page 155. “These tiny cactus plants, known as ‘meskal buttons’ contain from four to seven remarkable alkaloids which produce exquisite hallucinations of color designs and even intensity sounds. They are in common use among the North American Indians in ‘peyote worship’ ceremonies.”—Ed.
black storage batteries.
Moving about the room at last, Hale speculated. "Funny Dana didn't mention this," he mused. "Looks like mineralogical apparatus as well as general equipment. But what in the devil is this?"

He was standing by a massive copper tub filled with shining crystals. Over the top of it a glass hood rested, ending in a pipe that conducted to a compressor apparatus. A strong current on interest tugged through the scientist as he hunched over the crystals. His ears were quick to pick up a faint crackling from the vessel.

Lines of thought creased his brow, matching the puzzled gleam in his eyes. The mass of pinkish crystals was not stationary. It shifted and raised little octagonal pinnacles that grew high and then tumbled down. Glittering mounds crackled up and buckled into sheered-off fragments. The whole thing was restless moving—as though it were growing!

**IT STRUCK** John Hale suddenly, the meaning of this, the reason for the insanity that hovered over the valley. Rigid with understanding, he stood on the threshold of solving the riddle of the pueblo.

Part of the secret lay under that glass bell. His mind had already flashed him the meaning of this laboratory. Those crystals were growing—not as a salt grows by the action of an acid on metal, but as maggots grow into tremendous volume by feeding on one small bit of rotteness. For under that heap of shining crystals lay a nucleus on which these living crystals fed! The crystals were as much alive as he was! And, in a sense, they breathed; and when their deadly breath was exhaled, it was drawn off into the compressor, to be stored in cylinders.

Down through an ever-growing pyramid of knowledge in his consciousness one tendril of thought reached after a forgotten fact. This was not entirely new. Scientists had succeeded in cultivating a crystalline virus in the tobacco plant, which actually grew like a living organism. As far as they could tell, it was a link between the organic and the inorganic.*

And here in the age-old village of the mesas, one man—Hale was not ready to say which of the three—had done the same thing with the peyote bean. Had isolated the narcotic property in that drug and developed it to the point where he could draw off and store up its exhalations to release them later.

But why?

John Hale pounded that question at himself as he gingerly removed the lead-off tube and sniffed it. Yes, it was the deadly breath that held the valley inviolate. He struck a match and watched the gas burn with a tiny blue flame, blew it out and replaced the tube.

So deep in thought was he that he hardly knew it when he left the little laboratory and stood on a roof looking down into the valley. Somewhere down there, was the answer to all this. Somewhere in that little valley so like a crater, or the grave of a meteorite—

Was it the same thing that had driven the pueblo people to abandon their "Beautiful City" a few miles away, to start building this village... and then to leave it unfinished?

Hale went to his cot still wondering.

**CHAPTER III**

The Pool of Death

**ALL during breakfast he kept studying Dana and trying to fathom the**

Gentlemen!

Here is Unrationed Gaiety!

The Pleasure Primer

A Connoisseur's Choice

Here is a book for open minds and ticklish spines. Here is a book of a highly tempting flavor spiced to the liking of the most esquisitive taste. Here is lusty, merry entertainment for and about men who know how to live. Here is life with apologies to none. Collected, selected from the best there is, this zestful Primer is guaranteed to make the lassies giggle and here-men erupt in boisterous bellyfuls.

Here is no refuge for the straight-laced or satisfaction for the morbid. Served in a highly inviting manner, this pleasureful Primer is a blueprint for health and hearty living. Call it a gay evening's entertainment or an ideal bedside companion, you'll daily over its contents time and time again.

What more can be said of any book other than the self-appointed bearers of FORBIDDEN signs won't like it? Send along your orders, gentlemen, for this rarest of tomes just off the presses. Of course it's guaranteed, you either like it or IT DOESN'T COST YOU A CENT.

archaeologist as the perpetrator of the plot—whatever it was.

Suspicion and reason waged a battle within him: suspicion made him regard Dana unfavorably, and reason reminded him there was no apparent motive for such an act.

It was Dana himself who provided the next tangent of action. "I've been thinking that tunnel might have something to do with Weber's disappearance," he told Hale. "He said he was going down into it the day he disappeared, but whether he did or not . . ."

"I've been wondering the same thing," Hale admitted. "Since we haven't seen them in the daytime, it's possible they may stay in some tunnel. If it's near enough to the line of madness that seems to rim the valley, we should be able to rescue them."

"It's a long shot. I've looked for them every day since they disappeared. But it's a cinch that tunnel's a chance."

So flashlights were got out and they left the coolness of the adobe for aching forenoon glare, making their way down the dusty trail toward the tunnel that led into the steep side of the valley slope. A few hundred feet above the level at which Hale had lost his senses last night, they came upon the brush-hidden mouth of it.

A grateful coolness soothed their perspiring bodies as the cold air struck them. Dana set out gingerly into the black depths of the smooth-walled passage.

The slope led upward. By the loose gravelly rubble on the floor Hale put it down as an old river outlet. He kept close behind the other, glancing ahead now and then. Fifteen minutes crept by as they penetrated farther and far-

It's easy to write Thrilling Love Letters

FOLLOW THE EASY INSTRUCTIONS AND MODEL LETTERS IN THIS AMAZING NEW BOOK
THEY CLICK!

The men in our Armed Forces, the girls back home, know what it means to get letters. Think of the thrill when your sweetheart gets a love letter that really tells you the things you've been wanting to write. No longer will your letters be dry, awkward and uninteresting. Imagine the pride and satisfaction of knowing that your letters will be read and re-read and then saved in a special place for the time when you will be together again and these letters will be among the dearest treasures.

HOW TO WRITE LOVE LETTERS shows you how the most common things can sound interesting. No longer will it be necessary for you to rack your brain, hour upon hour, to convey that "certain something" in the most exciting way. It has been said that letters reflect the personality of the writer. Yet, too often people with sparkling, vibrant personalities write poorly, only because they do not know. HOW TO WRITE LOVE LETTERS will help you transfer your personality to your letters. No one who writes a letter should be without this amazing book. It is as necessary as the paper you write on.

HOW TO WRITE LOVE LETTERS contains dozens of actual sample letters that show just how to write your letters properly from beginning to end. Included in this "Must" book are scores of model love letters by world famous people. You will also find in this valuable book lists of useful synonyms — common errors, and how to avoid them — the correct spelling of many catchy words, and many more important letter-writing hints. Read the list of HOW TO CHAPTERS — and remember with each book you receive FREE, at no extra cost, ONE MONTH'S supply of your personalized writing paper. If you want to write letters that really hit the spot, send for this book today. Stravon Publishers, 342 Madison Ave., N.Y.C.

MONEY-BACK OFFER!
We believe you can write winning love letters with the help of this amazing book — but we want you to be the judge! Examine the book 10 days at our expense — if not delighted with book, return it and your money will be promptly refunded!

MAIL COUPON TODAY

other into the hill. The utter darkness was like fine coal dust that only their flashlight beams could melt, and that flowed back the instant they turned.

Then, with no warning, the walls suddenly fled back to form a small cavern. They stopped short inside it, eyes widening to the impressive sight of the rock vaulted ceiling and walls. Wordlessly they let their lights play over floor, ceiling and walls.

A low cry from Dana riveted the scientist’s eyes on the spot his rigid finger indicated. Simultaneously he keened his hearing to the musical bubbling of running water. Glistening coldly, the black sheen of dark water caught his gaze as it rippled down a channel through the center of the cavern.

Warily, because of the damp floor, they moved to the bank of the underground river ... and then, in the next instant, both men recoiled in horror, their minds rebelling at the ghastly sight before them.

IT WAS a pool of death they were gazing into. Barely rippled by the slow current, the clear deep water flowed quietly over the skeletons of scores of human beings who lay in ordered rows on the floor of the river.

But it was not death alone that covered Hale’s limbs with chill sweat. For these relics of a dead race were aglow with a phosphorescence that instilled a living white fire in their bones! In three parallel lines that extended far up and down the quiet stream, they lay watching the men above. The ruffled face of the water imparted a grotesque, sinuous movement to the brittle limbs.

A lump bulged inside Hale’s throat that he could scarcely force down. To be alone one moment, and in the presence of a hundred living dead the next! It was blood-chilling, the sight of all those grinning—

A sense that was half intuition brought the scientist’s arm up in a sweeping gesture of defense. Too late ... the gun in Dana’s fist jarred against his head with staggering force. Agony dragged him to his knees.

Before he could stir, the archaeologist raised the gun for a second blow. “You damned meddling fool!” The words exploded from his lips. “Try your sleuthing down there. Just ask those skeletons why Weber and Carlson disappeared. They’ll know the answer!”

Hale threw every ounce of his strength into a vicious drive at Dana’s midriff. The breath sobbed through his tight lips with the effort. But Dana had planned all this, and he was ready.

His knee rose to batter Hale’s defenseless jaw, and then the gun made its roundhouse sweep again. The scientist pulled up straight, and went staggering backwards. His face was bloody from the crimson torrents that the chopp- ing gun barrel had loosened.

Dana found it in his heart to laugh as John Hale stepped back into space and plunged into the water. He moved up and watched his form slowly settle towards the waiting arms of the luminous skeletons, and noted with satisfaction the ascending bubbles that meant an equal quantity of water was going into his victim’s body.

Hale’s whole body was sick with pain. He knew what was happening, though, for the shock of ice water had brought full consciousness in place of the drunkenness of a moment before. Twisting down through twenty feet of water, he saw the horrible company awaiting him. In fancy their bony fingers were already entangled in his hair.

The quickness of wit that had saved him many times before rallied his forces
now. Through the shimmering veil of water he saw Dana’s head loom over the bank to watch him. It was then that he released the realistic cloud of bubbles. Then he held his breath, allowing only a thin stream of bubbles to escape, and went sliding through the water to come to rest against the bony cage of a dead chest.

Within him, Hale withered. The rigidity of black horror paralyzed him as the bones caved and he sank another six inches into the very body of the dead aborigine. It seemed he must go mad before the watcher left, but at last the dark head pulled back and Dana was going.

Silently Hale clawed himself to the surface. Very cautiously he broke the water and glanced into the cavern. Yes, there was the retreating light. But it was going down the continuation of the tunnel, instead of back. Caring little for that now, Hale waited a minute or two and then wriggled to the floor.

Gaspimg, shuddering, half-frozen, he lay there for five minutes before the warmth of returning circulation set his thought-processes once more in motion. But with restored consciousness came a sharp chill of fear.

In his mind a small vortex of apprehension for the lives of the men he had been sent to find began to turn, until it was a boiling maelstrom of anxious conjectures that drove him to his feet and sent him staggering along the tunnel after the would-be killer.

CHAPTER IV

Backlash

One thing had been accomplished by the nearly fatal visit to the watery graveyard. The keystone had been mortared into place in the arch of facts he had built.

The pathetic story of how Pueblo
Bonito and the newer little village were deserted had been answered by the sight of the glowing skeletons. It was a search for water that drove the Indians over the hills to the new location. With the frightening spectacle of a drying river before them on which they relied for all their water, they had sought out a new source—and in this underground river they found it.

But death lurked in that water, though they did not know it. Hale realized now that his speculation that the cup-shaped valley was of meteorite origin was correct. It had burrowed in there far back in the shadows of Time, landing squarely in the midst of the underground stream.

By the time the natives found the river, it was flowing through the heart of the shattered meteorite—impregnating itself with the deadly radium or other radioactive substances inside it!

But the Indians did not know that. And they drank it day after day, and even built a city here so that it would not be such a long trip to water. Perhaps it was years before crumbling jaw-bones and horrible rheumatic pains warned them that they were being poisoned. And then it was too late.

As a sacrifice to the water-devils, they sank the already-dead victims of radium poisoning in the river, and then moved again, to disappear forever.

Eight hundred years had steeped those bones in the radioactive water until they became phosphorescent. If it had not been for the presence of the glowing skeletons, all this would never have happened.

Hale cursed the mischance that placed them where a man’s greed could read their story. Then he snapped his light off hurriedly, diving into the shelter of an outcropping rock, as a voice knifed the silence!

“DANA, for God's sake!” a hoarse voice protested. “Have you gone
Getting Up Nights Makes Many Feel Old

Do you feel older than you are or suffer from Getting Up Nights, Backache, Nervousness, Leg Pains, Dizziness, Swollen Ankles, Rheumatic Pains, Burning, scanty or frequent passages? If so, remember that your Kidneys are vital to your health and that these symptoms may be due to kidney infection or non-systemic kidney and bladder troubles—in such cases Cystex (a physician's prescription) usually gives prompt and joyous relief by helping the Kidneys flush out poison excess acids and wastes. You have everything to gain and nothing to lose in trying Cystex. An iron-clad guarantee assures a refund of your money on return of empty package unless fully satisfied. Don't delay. Get Cystex (Sigs-tex) from your druggist today. Only 35c.

Asthma Mucus Loosened First Day

For Thousands of Sufferers

Coughing, gasping, wheezing spasms of Bronchial Asthma ruin sleep and energy. Ingredients in the prescription Mendaco quickly circulate through the blood and commonly help loosen the thick strangling mucus the first day, thus aiding future in palliating the terrible recurring choking spasms, and in promoting freer breathing and restful sleep. Mendaco is not a smoke, dope, or injection. Just pills a day, tasteless palatable tablets that have helped thousands of sufferers. Iron-clad guarantee—money back unless completely satisfactory. Ask your druggist for Mendaco today.

Good News for Colon Sufferers

The McLeary Clinic, H-1021 Elms Blvd., Excelsior Springs, Mo., is putting out an up-to-the-minute, 123-page book on Colon Disorders, Fibles and Constipation and commonly associated chronic ailments. The book is illustrated with charts, diagrams and X-ray pictures of these ailments. Write today—a postcard will do—to the above address and this large book will be sent you FREE and postpaid.

BIGGER PAY THAN EVER!

Local "Store Route" Plan pays men like you big money—steady!—in wholesale business of your own. No capital necessary. Sell Vitamins to stores of all kinds. New low retail price, 5 for 15c, opens vast rich field. Handles this sales-maker, plus 300 other quick profit items. Many nationally advertised. No experience needed. Amazing facts FREE. Thompsonville, Illinois.
Do You Make these Mistakes in ENGLISH?

Sherwin Cody's remarkable invention has enabled more than 100,000 people to correct their mistakes in English. Only 15 minutes a day required to improve your speech and writing.

Many persons say, "Did you hear from him today?" They should say, "Have you heard from him today?" Some spell "calendar" as "calender." Still others say "between you and I." It is astonishing how often "who" is used for "whom," and how frequently the simplest words are mispronounced. Few know whether to spell certain words with one or two "c's" or "m's," or "f's," or with "ie" or "ei." Most persons use only common words—colorless, flat, ordinary. Their speech and their letters are lifeless, monotonous, humdrum. Every time they talk or write they show themselves lacking in the essential points of English.

WONDERFUL NEW INVENTION

For many years, Mr. Cody studied the problem of creating instinctive habits of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students averaged one correct mistake in five weeks that previously had been obtained by other pupils in two years.

Learn by Habit—Not by Rules

Under old methods, rules are memorized, but correct habits are not formed. Finally, the rules themselves are forgotten. The new Sherwin Cody method provides for the formation of correct habits by calling to your attention constantly only the mistakes you yourself make. None of the wonderful things about Mr. Cody's course is the speed with which these habits and spelling drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. The drudgery and work of copying have been ended by Mr. Cody! You concentrate always on your own mistakes until it becomes "second nature" to speak and write correctly.

FREE—Book on English

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you cannot instantly command the exact words with which to express your ideas, this new free book, "How You Can Master Good English—In 15 Minutes a Day," will prove a revelation to you. Send the coupon or a letter or postal card for it now. No agent will call.

laughing that came suddenly from Carlson. Already he was going under!

There was no time to lose. And as Dana gestured a humorous goodbye to his victims, he got ready. The archaeologist turned to go.

At that moment a thunderbolt of fury hurled itself upon him from the weapon to the floor. His fists shouted in alarm and his gun leaped to his hand.

Hale's down-sweeping hand knocked the weapon to the floor. His fists thudded solidly against the heavier man's torso. Unknown to himself, he was shouting. The gas was getting him, more so than he realized. All he knew was that he was ready to quit, to lie back quietly and watch the gyrating forms of indescribably beautiful colors that cascaded down before him. But a hidden well of power kept his fists and body laboring with the fury of a wounded animal, while his mind was slipping back into Nirvana.

Snarling his anger, Dana flung him against the rock wall. Hale's head bounced. Then, with the rush of clarity born of pain, he saw his chance. The flashlight was still clutched in his hand, and as the other rushed in, he cocked his arm.

Thud! The sound of the single blow was sickening. Dana went down like a limp rag.

Through the reddish fog the scientist could barely see the two forms on the floor. Again he drew on a bank of reserve power to navigate the room and bend down by the archaeologists. Fumbling fingers aroused fury in his mind. With every breath the display of lights increased, but now there was a sharp pain with it that he had not experienced the night before. He must hurry!

His time was almost up when he had released the two. He shouted to them,
tried to make them understand what they were to do, and steered them toward the exit. Pushing, shoving, swearing, laughing. Hale got them started. He thought of turning off the gas, and rejected it as a new wave of weakness swept through him.

On the point of following, he pulled up. A gasp of fear passed his lips. Dana had come to and recovered the gun!

Blood-streaked, he stood leaning against the wall, trying to bring the gun up into line. He was sick and weak and almost out on his feet. Through the drifting boiling red fog his figure stood out menacingly.

Hale shouted, “Don’t! For God’s sake!”

But Dana kept on trying to pull the trigger with the last of his strength. Hale knew the gun would go off before he could reach him. There was one.

chance left to him. He turned and staggered from the room, careening drunkenly along the tunnel with his flashlight cutting crazy arcs before him.

The two explosions came almost simultaneously. One, the sharp crack of a revolver. And then an expansive, crushing roar that flung Hale off his feet and piled him against the wall twenty feet farther on.

A sheet of flame swept from the gas-packed room with a loud whoosh. The earth shook like a bowl of jelly, bringing down a fall of small rocks from the ceiling. Hale's head was clear now, though he ached from the top of his head to the soles of his feet. He was as deaf as a rock, but he had had the good sense to keep his mouth open.

A tremor pulsed through the earth, starting far down below them. As it came nearer, Hale closed his eyes and waited for the end. But it passed with no more than a jar which cracked the tunnel open at a few spots.

After a while there remained nothing of the terrific explosion save the ringing in Hale's ears. He couldn't believe it for a long moment. He was safe! Carlson and Weber were safe!

Then he crawled to his feet and turned the battered light down the tunnel. A light gray smoke filled the room, but through it Hale made out a black huddle on the floor. It had the general shape of a man, though it was only a blackened cinder.

"I tried to warn him!" the scientist breathed. "He should have known, as I did, that it was explosive!"

He turned then, and made his way swiftly as he could up the tunnel. More than anything in the world he wanted to see the sun again and get a deep breath of fresh air. . . .
FAMOUS IN A FEW YEARS

Sirs:

There were two excellent stories in the Sept. issue. “When The Darkness Came,” and “The Devil’s Planet,” by David Wright O’Brien. O’Brien is always welcome; how about some more like “When The Darkness Came”? Let’s have more cover paintings by J. Allen St. John. He is my favorite. If you find more new authors like Yerxa, let’s have them. He should be famous in a few years.

DAVID C. FORD,
Box 63,
Owasco, New York.

More paintings by St. John are coming. And we agree that Yerxa is very promising. We have high hopes for him.—Ed.

ALL-TIME TEN BEST

Sirs:

No other magazine gives me as much enjoyment as yours. Of the stories I have read in your grand magazine, I like the following ten best. 1—The Test Tube Girl; 2—The Liquid Man; 3—The Voyage That Lasted 600 Years; 4—The Day Time Stopped Moving; 5—The Visible Invisible Man; 6—The New Adam; 7—King Arthur’s Knight In A Yankee Court; 8—The Immortality of Alan Whidden; 9—The Invincible Crime Buster; 10—Doorway To Hell.

GEORGE MUCHA, JR.,
63 Madison Ave.,
Perth Amboy, N. J.

You’ve certainly picked a list here! We remember each of those stories with a lot of pleasure ourselves!—Ed.

UNSTINTED PRAISE

Sirs:

A story has to be, in my opinion, really wonderful before I take up the task of writing to the editor. I have found such a story in your Sept. issue. “When The Darkness Came”—a four-star winner! This story was not only well written, but the suspense was something to behold. I must admit, a bit sheepishly, that for a while there, I was almost tempted to turn to the end and see the outcome. It did not destroy the hypnotized feeling of the reader, but rather followed it up-to-the core. It was an amazing story in an amazing magazine.

The September issue of AMAZING STORIES was truly wonderful. Every story was delightful by itself. Honorable mention goes to Patton’s “War Worker 17,” another fine story.

RITA BERMAN,
1502 42nd Street,
Brooklyn, N. Y.

Thanks, Rita. You make us feel good!—Ed.

ANALYSIS OF SEPTEMBER ISSUE

Sirs:

Pertaining to the September issue of AMAZING STORIES, the rating of the stories are as follows: 1—“Luvium, The Invincible City”... one of the best stories ever written by any author. More like this. 2—“When The Darkness Came”... a highly original plot, a new twist in science stories. 3—“Lunar Vengeance”... a fair story. Not too well told. 4—“The Devil’s Planet”... the finest story every written by O’Brien. Could we have more like that? 5—“War Worker 17”... a pretty good story, well told. 6—“The Powerful Pipsqueak”... fair. The plot wasn’t too original. 7—“Madcap Of Mars”... poor! Horrible! Never again!!! The back covers are fine. More of these fine works of art by Settles.

JACK DELMOUR,
7709 Broadway,
North Bergen, N. J.

Settles has a whole series of covers for us. You’ll keep on getting them.—Ed.

ATOMIC BULLETS?

Sirs:

In many of your stories I have noticed the use of machine guns, rifles, etc., firing explosive atomic bullets. Being well aware of the tremendous amount of voltage required to release this titanic force of energy, I have wondered how the necessary paraphernalia could possibly be included in a thirty or fifty caliber projectile?

KENNETH PUTMAN,
Rt. 1,
Huntland, Tenn.

Always new inventions are cumbersome at first. Present atom smashers are huge. Does that mean more efficient methods will not be developed?—Ed.
ETHER-POWER SHIP OF EUROPAl

By MORRIS J. STEELE

The vessel used by the inhabitants of Europa, one of Jupiter's moons, is powered by energy out of the air

(See Back Cover)

According to astronomers, Europa is one of the satellites of the giant world, Jupiter, and is the second of nine satellites. Its distance from the center of Jupiter is 416,600 miles, which places it somewhat less than twice as far away from its parent body as our own moon.

Its period of revolution is 3 days, 13 hours, 13.7 minutes. Its diameter is 1,960 miles. At the present time it is not believed to have an atmosphere.

Some time in its history, it must have been a world very capable, in spite of its distance from the sun, of supporting life. It is that period in its history that concerns us.

Imagine a world with a very thin blanket of air, far away from the sun so that it appears only as the brightest star in the sky, and near enough to a giant world that fills almost all of the heavens, except for the fact that almost always it is blanketed from view by seething purple-colored clouds.

Here we find a world which is slightly oblate, so that it now possesses two great oceans, one at each pole, separated by a strip of land around the equator. These oceans never freeze, because on this world, there is no such thing as winter, due to its double source of light and heat, the sun and Jupiter itself. Jupiter is, at this period in the solar system's history, a world still aflame, a junior sun. And on the surface of these two great oceans we find a race of people who have built extremely strange ships indeed.

These ships are a queer mixture of super-science and primitive ingenuity. Although they are powered by one of the mystery energies of the universe, cosmic energy drawn from the ether itself, they are propelled by common oars, rigged in series to the motors inside the ship.

Perhaps the Europian never conceived of the propeller. At any rate, none of his ships are driven by other means than oars.

To our surprise, they have produced a ship which is very much along the same lines as our own ships, having a slim, stream-lined hull, with a sharp prow to cut the water.

Up forward is a control cabin, and the helmsman's wheel. About midsthip, along both sides, is a bank of giant oars, rigged in series on a parallel bar which acts like a piston on a locomotive.

Above the control cabin the resemblance to Earth ships ceases. Here we have another deck, something like the crow's nest of a sailing vessel, mounted on a short mast. Extending upward from this crow's nest is an aerial provided with a Y branch, each arm of which ends in a smaller Y branch. This is the aerial which captures the cosmic rays which come through the thin atmosphere in much greater force than on Earth. Directly at the apex of the field of energy thus trapped, we have an arrow-like rod, similar in principle to a lightning rod, which catches and converts the cosmic energy into a usable form of power. This conversion results in an escape of energy in the form of light and heat. The long bar of the lightning rod disperses this harmlessly into the surrounding atmosphere, being visible to the eye by reason of a rainbow-like banner of color, much like the spectrum band broken from ordinary light by the prism.

This source of power is constant, not being affected by the weather or by the presence or lack of a cloud blanket.

The ship itself is constructed of wood, very strongly constructed with painstaking attention to joining, so that no stress or strain can loosen the parts, and at the same time each joint can give with the motion of the ship.

Europa never has violent storms, so this ship must withstand only the daily tidal waves that sweep both oceans with the rotation of the planet. These tidal waves are made choppy by the competing gravity of the sun, whose influence is much less than that of the giant world, Jupiter, so near in the heavens of Europa.

Because of these waves, the forepart of the ship is enclosed, and the after decks are left clear of movable objects. When the waves appear, the crew remains either below-decks or in the control cabins.

To combat any chance of swamping, the ships are built with a very deep draft, having perhaps twice as much of the hull below water as above, and ballasted heavily in the keel.

The oars are adjustable, riding on curved metal I-beams so that they can be set to any desired depth. Shallow depth for slow motion and deep draft for great speed. These ships can attain a speed in excess of eighty-five miles an hour!
THOUGHTS HAVE WINGS

You Can Influence Others With Your Thinking!

TRY IT SOME TIME. Concentrate intently upon another person seated in a room with you, without his noticing it. Observe him gradually become restless and finally turn and look in your direction. Simple—yet it is a positive demonstration that thought generates a mental energy which can be projected from your mind to the consciousness of another. Do you realize how much of your success and happiness in life depend upon your influencing others? Is it not important to you to have others understand your point of view—to be receptive to your proposals?

Demonstrable Facts

How many times have you wished there were some way you could impress another favorably—get across to him or her your ideas? That thoughts can be transmitted, received, and understood by others is now scientifically demonstrable. The tales of miraculous accomplishments of mind by the ancients are now known to be fact—not fable. The method whereby these things can be intentionally, not accidentally, accomplished has been a secret long cherished by the Rosicrucians—one of the schools of ancient wisdom existing throughout the world. To thousands everywhere, for centuries, the Rosicrucians have privately taught this nearly-lost art of the practical use of mind power.

This Free Book Points Out the Way

The Rosicrucians (not a religious organization) invite you to explore the powers of your mind. Their sensible, simple suggestions have caused intelligent men and women to soar to new heights of accomplishment. They will show you how to use your natural forces and talents to do things you now think are beyond your ability. Use the coupon below and send for a copy of the fascinating sealed free book, “The Mastery of Life,” which explains how you may receive this unique wisdom and benefit by its application to your daily affairs.

The ROSICRUCIANS (AMORC)

Scribe X.N.L., The Rosicrucians, AMORC, Rosicrucian Park, San Jose, California.

Kindly send me a free copy of the book, “The Mastery of Life.” I am interested in learning how I may receive instructions about the full use of my natural powers.

GEE what a build! Didn't it take a long time to get those muscles?

No SIR! — ATLAS Makes Muscles Grow Fast!

Will You Let Me PROVE I Can Make YOU a New Man?

LET ME START SHOWING YOU RESULTS LIKE THESE

5 inches of new Muscle

What a difference!

My arms increased 1 1/2", chest 2 1/2", 7 1/2", "E. W. Va.

Here's what ATLAS did for ME!

John Jacobs

What a difference!

Have put 3/4" on chest (normal) and 2 1/2" expanded. — P. S., N. Y.

For quick results I recommend CHARLES ATLAS

Am sending snapshot showing wonderful progress. — W. G., N. J.

GAINED 29 POUNDS

Here's what ATLAS did for ME!

When I started, weighed 142. Now 170 lbs. — R., K., N. Y.

I DON'T care how old or young you are, or how ashamed of your present physical condition you may be. If you can simply raise your arm and flex it I can add SOLID MUSCLE to your hips—in double-quick time! Only 15 minutes a day—right in your own home—is all the time I ask of you! And there's no cost if I fail.

I can broaden your shoulders, strengthen your back, develop your whole muscular system INSIDE and OUTSIDE! I can add inches to your chest, give you a vise-like grip, make those legs of yours liter and powerful! I can shoot new strength into your old backbone, exercise those inner organs, help you cram your body full of pep, vigor and red-blooded vitality that you won't feel there's even "standing room" left for weakness and that lazy feeling! Before I get through with you I'll have your whole frame "measured" to a nice, new, beautiful suit of muscle!

What's My Secret?

"Dynamic Tension!" That's the ticket! The identical natural method that I myself developed to change my body from the scrawny, skinny-chested weakling I was at 17 to my present super-man physique! Thousands of other fellows are becoming marvelous physical specimens—my way. I give you no gadgets or contrarions to fool with. When you have learned to develop your strength with "Dynamic Tension," you can laugh at artificial muscle-makers. You simply utilize the DORMANT muscle-power in your own God-given body—watch it increase and multiply—suddenly—quickly into real solid LIVE MUSCLE.

My method—"Dynamic Tension"—will turn the trick for you. No theory—every exercise is practical. And, man, so easy! Spend only 15 minutes a day in your own home. From the very start you'll be using my method of "Dynamic Tension" almost unconsciously every minute of the day—walking, bending over, etc.—to BUILD MUSCLE and VITALITY.

FREE BOOK
"Everlasting Health and Strength"

In it I talk to you in straight-from-the-shoulder language. Packed with inspirational pictures of myself and pupils—fellows who became NEW MEN in strength, my way. Let me show you what I helped THEM do. See what I can do for YOU! For a real thrill, ask for this book to-day, AT ONCE! CHARLES ATLAS, Dept. 115 East 23rd St., New York 10, N. Y.

CHARLES ATLAS

Awarded the title of "The World's Most Perfectly Developed Man" in international contest-in competition with ALL men who would consent to appear against him.

This is a recent photo of Charles Atlas showing how he looks today. This is not a studio picture but an actual un-retouched snapshot.

CHARLES ATLAS

115 E. 23rd Street, New York, 10, N. Y.

I want the proof that your system of "Dynamic Tension" will help make a New Man of me—give me a healthy, husky body and big muscular development. Send me your free book, "Everlasting Health and Strength."
