One Connector. Every Way to Pay.

What sets PayFusion365 for SensePass apart from every connector before it

SensePay is not a terminal driver and not a single-gateway bridge. It is a payment-orchestration layer embedded in Dynamics 365 that meets the customer wherever they are, on whatever surface, with whatever method, in whatever currency.

1

Unbound by UI or Module

The same payment intelligence renders on a device, portal, Dynamics 365 F&O and Business Central, a puck via QR, a sticker, a custom site, an app, an API, a wallet, or a gateway.

2

Many Methods, Providers & Gateways

A single integration surfaces cards, mobile and e-wallets, BNPL, foreign wallets, bank and ACH, and crypto across multiple providers, gateways, and platforms.

3

Cross-Border by Design

Accept domestic and foreign wallets and local methods so customers pay in the way they already trust, wherever in the world they transact with you.

4

Tailored to the Experience

Configure the exact checkout journey you want, by vertical, channel, and brand, instead of bending your operation to a fixed terminal flow.

5

Scales 1 to Thousands

Start with a single device and grow to thousands of locations and storefronts on the same platform, with no re-architecture as you expand.

6

New-Age: ACH to Crypto

Accept everything from ACH and pay-by-link to BNPL and crypto, with full tokenization and PCI-scoped security across every transaction.

Touchless by Design

Hyper-modern payments triggered by presence, not plastic, embedded directly in Dynamics 365.

Built for Retail, Trusted by Agencies

High-speed, low-contact transactions for large retail footprints and public-sector storefronts alike.

Direct, Native Integration

No third-party gateway stack to assemble, so you go live fast with minimum disruption.

Quadruple your accepted payment methods. Customers reach funds on any digital wallet and pay by tap, link, or QR, while SensePay co-exists with the traditional methods you run today, with no additional hardware required.

Rendered Anywhere a Customer Can Pay

One orchestration layer, every surface, no terminal lock-in

Most connectors live inside one screen. SensePay is presence-based and surface-independent: the same Dynamics 365-native payment intelligence projects onto whatever the moment calls for, from a counter to a kiosk to a phone in a customer's hand.

SensePay Orchestration · embedded in Dynamics 365

Kiosk/Counter

Self & assisted

Tap to Pay

Contactless NFC at the lane or on a mobile device, no proprietary terminal to buy.

Scan a QR

A puck, sticker, or screen turns any spot into a checkout in seconds.

Open a Link

Pay-by-link by email or SMS for call-center, back-office, and remote collection.

No additional hardware. Because SensePay is presence-based rather than terminal-bound, you deploy with minimum disruption and maximum reach, and the customer simply taps, scans, or clicks a link to pay from funds on any wallet.

Every Way Your Customer Wants to Pay

Cards to crypto, domestic to cross-border, all through one integration

One connector, every rail. SensePay surfaces more than twenty methods across six categories, so you stop turning customers away at checkout and start meeting them on the payment they already prefer.

Cards & Benefits credit, debit, EBT

Visa Mastercard American Express
Discover Diners Club EBT

Countertop & Payment Journal

CALL & NO-CALL CENTER

● Countertop Device: Pay by Card

● Countertop Device: Pay by Card (Manual Entry)

● Customer Payment Journal: Pay by Card

● Real-time AR clearing & automated GL posting

Tokenize by Email or SMS

Capture and vault a card without the customer at the counter.

Collect by Pay-by-Link

Send a secure link by email, SMS, or ACH and release the order on payment.

Reconcile in Dynamics 365

Batch IDs and settlement reports post straight to the GL, no exports.

Every Storefront, One Payment Rail

D365 Commerce (LCS) · 3rd-party platforms · exposed RESTful API

Native Dynamics 365 Commerce via Lifecycle Services and any third-party platform via an exposed RESTful API, with consistent tokenization, reconciliation, and reporting across every digital channel, plus account-to-account ACH at checkout.

D365 Commerce

LIFECYCLE SERVICES

- Board Card on File with Auth
- Non-Recurring Tokens
- Pay by Card (card-not-present)
- Subscription & cross-channel card-on-file
- Real-time auth, capture & ERP-native GL posting

3rd-Party & Headless

EXPOSED API

- Pay by Card via exposed RESTful API
- ACH at checkout (B2B/B2C) **NEW**
- Same rail for custom sites, apps & QR
- Imported auth & token handling
- Unified reconciliation across channels

One Rail, No Parallel Builds

Shopify, Magento, and custom storefronts route through the same Dynamics 365 payment infrastructure as native Commerce, with no duplicate integrations to maintain.

Wallet-First Checkout

Customers reach funds on any digital wallet and complete payment by tap, link, or QR, lifting conversion and average basket size.

Account-to-Account ACH

Move high-ticket and B2B orders to low-cost ACH at the storefront, with full tokenization and reconciliation.

Native D365 Commerce

Any 3rd-party via API

Headless & custom sites

ACH at checkout

Line-Busting Speed, No Terminal Lock-In

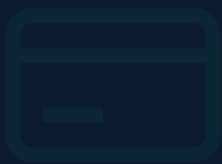

StoreCommerce app & web · tap-to-pay, QR, and link at the lane

Enterprise POS through Dynamics 365 StoreCommerce, using NFC tap-to-pay devices, QR or puck, or the phone itself, with no proprietary terminal to buy or maintain and full EBT acceptance for public-sector retail.

Core Transactions

- Pay by Card: EMV, NFC tap, QR scan-to-pay
- Manual Entry (Credit Card, Card-on-File, Customer Order)
- Linked & Non-Linked Returns
- Store and Forward (offline mode)
- Tap-to-pay device, QR/puck, and sticker surfaces
- StoreCommerce for Web: Pay by Card

Orders, Ops & Compliance

- Customer Order: Deposit Override & Full Payment
- Customer Order Return
- Payment Agreement & Payment Signature
- Marketing Opt-In & Donation
- Level II/III data & Lane ID
- Reconciliation Report & Batch ID
- In-app HelpCenter

Retail Floor

Tap, QR, or wallet at any counter or aisle.

Line-Busting

Turn any device into a lane during peak demand.

Call Center & Remote

Collect by pay-by-link when the customer is not present.

Public Sector & EBT

Government storefronts with EBT and audit-grade reporting.

One platform, every counter. The same StoreCommerce deployment serves staffed lanes, self-service, line-busting, and remote collection, so peak demand and distributed sites run on one consistent payment experience.

Cross-Border. Scalable. Secure.

From a single device to thousands of locations, in any market

SensePay is engineered for the enterprise from day one: a global method set, elastic scale across divisions and geographies, and bank-grade security with credentials that never touch your ERP.

Cross-Border

Foreign wallets and local methods, including Alipay, WeChat Pay, and Mercado Pago, let international customers pay the way they already do at home.

Elastic Scale

One platform spans a single mobile payment to thousands of locations and storefronts, with no re-platforming as you grow across divisions and regions.

Security & Tokenization

PCI-scoped token vaulting and end-to-end encryption across cards, wallets, ACH, and crypto, with credentials never exposed to your ERP.

US SUPPORT

CUSTOMIZABLE EXPERIENCE

Shape the checkout to your vertical and brand, by channel and surface, instead of conforming to a single fixed terminal flow. SensePay co-exists with the traditional methods you run today.

MINIMUM DISRUPTION

No additional hardware and no third-party gateway stack to assemble. Deploy natively in Dynamics 365 and go live fast, backed by US-based engineering around the clock.

About SensePass. A team of technology veterans and fintech innovators building an omnichannel payments network that operates around any digital wallet, so paying becomes a seamless, tap-simple moment in the customer experience.

READY WHEN YOU ARE

Ready to Transform Your *Dynamics 365* Payments?

US-built, enterprise-tested, and fully supported every hour of every day. Quadruple your accepted payment methods and let customers pay by tap, link, or QR, on any surface, with no new hardware.
