

Team up. Seamlessly.

Introducing the world's first video conferencing monitors certified for Microsoft Teams.* Dell Video Conferencing Monitors are designed for Microsoft Teams and bring a new layer of connectivity to you and your employees, giving you ways of interacting and engaging as if you were in the same room. From scheduled meetings to 'water cooler moments' and catch-ups – all can be delivered through Microsoft Teams to enable inclusive and people-centric collaboration experiences.

Live Captions: Microsoft Teams can detect what's being said during a meeting and present real-time captions and speaker attribution, so that everyone knows who's speaking.

Proximity Join: Microsoft Teams uses Bluetooth to find a nearby Microsoft Teams Room and nudges it to see if it's free. If it is free, it offers to add the room to your meeting.

Together Mode uses AI segmentation technology to digitally place participants in a shared background, making it feel like they are in the same room with everyone else in the meeting.

Live Reactions: Users can now react during meetings using emojis, supplementing non-verbal cues that can be difficult to notice in online meetings.

Microsoft Whiteboard updates will include faster load times, sticky notes, text, and drag-and-drop capabilities, enabling team members from everywhere to participate in whiteboarding sessions.

130 mins

Employees spend on average **2 hours 10 minutes** each day on video calls.¹

63%

of global IT decision makers are seeing increased demand for monitors with built-in camera and speakers.²

115 million

Microsoft Teams daily active users.³
