cyber threats to businesses	10	12.23	0.55	41							

*This is a very competitive niche to rank for high volume keywords. Despite that, here are 11 very good keywords for your site. All results are based on actual search terms related to your niche. If a term you like or think is good and does NOT appear here, it's because of low-monthly-search-volume or high-competition-levels. Multiple selection criteria with **NEW CROSS VERIFICATION OF TOP RESULTS** have been used to find them. All have extremely low competition levels and, with proper on-page and off-page SEO, you can rank for any of them.*

*My first choice for you as a primary keyword for your page – if content applicable - would be **"top ten cyber security threats"** because of relevance, volume, moderately low niche competition (note "allintitle" and "allinurl numbers!") across all metrics. A number 1 organically ranking page for this keyword could get **549 hits/mo.** (42% of total searches in table).*

I would also create more (or use existing) sub-pages with titles equivalent to other keywords on the list you like and SEO each one for each keyword. Done properly , this can increase your total hits per month.
