Here are 15 very good keywords for your site. All results are based on actual search terms related to your niche. If a term you like or think is good and does NOT appear here, it's because of low-monthly-search-volume or high-competition-levels. Multiple selection criteria with **NEW CROSS VERIFICATION OF TOP RESULTS** have been used to find them. All have extremely low competition levels and, with proper on-page and off-page SEO, you can rank for any of them.

My first choice for you as a primary keyword for your page – if content applicable - would be **"ebook publishing platforms"** because of relevance, volume, low niche competition (note "allintitle" and "allinurl" numbers) across all metrics. A number 1 ranking page for this keyword could get **38 hits/mo.** (42% of total searches ).

I would also create more (or use existing) sub-pages with titles equivalent to other keywords on the list you like and SEO each one for each keyword. Done properly – with more top-ranked pages - can increase your total hits per month.
